That seems to be how Cheek likes things. He can't debate an issue,
merely insult and otherwise attempt to silence the people that don't
nuzzle his posterior. Apparently now there are two droids that don't
mind doing so.

I have a pro-90 and i love it..

Acually both RS TrunkTrackers and the BC235XLT are the same. But the BC895 (base) is different. The BC895 has a computer control port built in. I am told by some friends that it is possible to follow up to 4 trunked systems while the scanner is attached to a computer.

Pro 90 and BC235XLT are the only TT's around. They are both made by Uniden and are IDENTICAL on the inside. The only difference is the extras and the appearance. The BC235 comes with an extra battery and a charger for the battery. Shop around for the best price, but remember what you are or aren't getting with your scanner. I have a BC235 and am very pleased with it. I had to order a third battery because of how much I used it. I paid less than half for that third battery because I bought it from Uniden. If you want info/prices on the Uniden check out www.uniden.com If you want info on the Pro 90, go to RS their prices are the same everywhere. Last I saw RS wanted $275.

7. Re: Yugo, an excellent car

Newsgroup: rec.radio.scanner
Date: 1998-03-01 00:00:00 UTC
From: derickam@aol.com
Message-ID: <19980301202501.PAA04673@ladder03.news.aol.com>
Source record: 168643

Not enough metal in a yugo to make a decent artillery shell.

And using a mobile scanner in one is too much of a current draw on the electrical system. Plus there is no ferrous metal to use a mag mount antenna. I supposed you could use a mounted antenna but that would either:

1. Corrupt the structural integity of the vehicle.

2. Create too much drag, although if you rigged a sail and were traveling down wind you would be okay.

3. The lack of any substance to this car has a benefit, cop radar passes right through without any returns. (no return of RF no speed indication)

To my limited knowlege I would go for a Geo Metro, at least it is American (well...thats what I heard anyhow) and parts are still in stock.

PS - ;)

I am sorry if my spelling or grammar or lack thereof, has upset those to whom I am talking(oops, I meant speaking).

derick

8. Help for the antenna ignorant, please.

Heck, I always thought a droid was someone who went along with the status quo, basically without thinking or questioning. You know, someone who is content to parrot what other people say without using the brains he was born with. I have neveragreed much with Cheek and if you weren't a newbie, you would know that some of the battles I have had with him r.r.s. are the stuff of legends.

Of course, you seem to be aping Iwstirn's line of thinking, which makes me wonder just who is the droid.

I took apart my scanner and found that the pad can be taken out of it. If your scanner has a rubber pad for the buttons then you could take it out and wash it. Just be careful not to rip it and dry it real good before you put it back in. You have a really clever kid if she thought the numbers would come off. That is a pretty funny story. Hope this helps

Depending on the system and frequencies used, you may have to be in the
parking lot of the place. I've found this especially true when the
place is using VHF-LOW because of the long antenna needed for the low
frequency. But typically if its VHF-HI or UHF, the distance is around
a few blocks, farther if you have better line of sight by being
above(higher altitude) the restaurant.

Hi TailGator,

I have seen this problem in my "shack" before, and its more related
to the preamps located in stereos and speakers. What happens is strong,
nearby signals are overloading the frontend of the preamps inside the
devices. I live on a fairly busy road, and we get occasional big rigs
with their illegal linear amps on their cbs. Both my computer preamped
speakers, and my stereo both let the signal blow through.

It's actually been quite scary at times, when the voices are in my room
and I know no scanners, rigs, etc are on.

Hope this helps.
Keith

I have an amplified speaker in my pickup. Sometimes when I'm next to a big rig with a CB I'll here the audio even though the speaker is not connected to my scanner. When I was younger, the church I went to would sometimes pick up the CB in a house across the road on it's PA system. I've even had CB audio come through my home stereo. I guess if the signal is strong enough it will get though.

I have to agree with Bill I have 2 Uniden scanners and did have a
third one the first was a Pro-29 made by Uniden had cold solder joints
had to go thru it and radio worked much better had some nice features
Also have a Pro 46 needs a tune up and probably has the same cold
solder joint problem but need a service manual to tune it up.
Alos have a Pro 2036 and a friend has a 890XLT which is the same
radio and the only nice thing about these radios are the ctcss board
as for the search and auto store, it is useless just get your hands
on one a do a 200 channel search and store from 29 meg and up and
before it gets to 500 meg it will have filled the 200 channels with
birdies.
Like bill said uniden has some great sizzle but not much steak!!
Stick with GRE made scanners, unless you have the cash for the over
$1000 jobs.

I don't see what the problem is about Bills books, I have the first
2 and a friend has the third so far he has installed in a 2004 and
2006 is data squelch, s-meter, x tend delay, slightly modified
Keyboard Memory controller for the 6,400 channels in both his 2004 and
2006 and my 2004, along with home brewed ce-232 computer interfaces
for all 3 scanners and is now working on interfacing the Pro-43.
Great books with allot of Good stuff in them.

I just wish all the people out there that have bought and used his
books would let this group know what a help they have been in making
an excellent scanner a GREAT scanner.

Hi, I would advise disconnecting any receiver that you are concerned about damaging.
Back in highschool 1979ish... My buddy Jack was tuning up his HT-37 into an inverted vee antenna for 80 meters and i was holding the Pl-259 from the 40 meter inverted vee in my hand and received a rather sever rf burn on the palm of my hand. So yes, the induced rf between the antennas can be quite substantial. Just my opinion as usual. Best wishes.. Mike Burch K8MB

I have the following items for sale. General terms of purchase are:

All items are sold "as is", with no implied warranty. Payment shall
be made prior to shipping with postal money order, cashiers check (or
personal check with appropriate clearance period). COD arrangments
will be considered but are not to be assumed. All prices include
shipping costs unless noted. Shipping from Columbia, Maryland area
to US Lower 48 by FedEx unless buyer prefers other (US Post, UPS).
Items may be withdrawn from sale at anytime without further notice.

ICOM R71A
Original owner
Purchased Dec 90
32 Ch Scanning Communications Receiver
100KHz to 30MHz
AM/SSB/FM
This unit does not have PassBand Tuning
(10Hz tuning step eliminates need)
with IC EX257 FM Demod
with IC RC11 Remote Controller
with IC UX14 CI-IV/CI-V Converter
with IC SMR71A Service Manual
(with failed(?) IC EX310 Voice Synthesizer in box)
with original box, packing materials and documentation.
Unit is in excellent condition.
Spent most of time in ventilated cabinet away from dust.
Price: $500.00

for more details see

http://members.home.com/malmberg/r71.htm

ICOM R1
Original owner
Purchased May 91
100 Ch Scanning Hand-held Communications Receiver
100KHz to 1300MHz
AM/NFM/WFM
with IC LC57 Soft Case (showing wear, but has protected unit)
with IC 150-FA430BB 430MHz Antenna
(this antenna has smaller profile than stock antenna)
with original box, packing materials and documentation.
Unit is in excellent condition.
Spent most of time running from AC
(battery discharged approx. twice per month).
Early production unit of this model. This radio does exhibit

poor selectivity, but size is astonishing (especially seven years ago).
Unit will perform well even in crowded RF environments, however,
selection of key frequencies may be necessary, especially if near
transmitter sites. Unit is continuous coverage 100KHz to 1300MHz.
Price: $275.00

for more details see

If you are thinking of the RZ-1, they are much older than "a year or
so." I think they have been out of production for 3 or 4 years --
possibly longer.

Check out Bill Cheek's site for a list of what is possible:

http://ourworld.compuserve.com/homepages/bcheek/

A recent issue of Bill's "World Scanner Report" was devoted to the PRO-64.
You might want to buy a copy of that.

BTW, cell phone reception is *not* possible with the PRO-64.

Chuck, piece of advice....

Leave the N/G out of your commercial interests. people don't want to waste the bandwidth it takes to download your commercials. Most of the stuff that has to do with a commercial venture on this N/G has to do with someone asking "Have you dealt with so and so", or "How was your dealings with this person". Not "Hey I am in the CB business.... Come and see". If your prices are good, then people will flock.

Toll Free

> Is there a way to modify my BC9000XLT to add a 10.7mhz output jack for
> running aa AOR spectrum anilizer ?

First, get a schematic and service notes.
Then, find the point where the 10.7 MHz signal goes into the mixer to be converted to the second IF at 455 KHz. The 10.7 input to the mixer is where you want to tap your signal. Couple it thru a .1 or .2 Mfd cap to the center pin of an RCA jack mounted on the rear of the chassis. Be sure that the shell of the jack is grounded.
Try contacting Bill Cheek at bcheek@san.rr.com and see what he says... Regardless of all the crap in the NG's about him he seems to know his stuff about radios.
Please let us know if you get the AOR analyser working. I'm curious about the machine and whether it could be used on a PRO 2006.
Good Signals,
-- Chuck

-> Subject: Re: Bearcats or Radio Shack trunktrackers??? Advice?
->
-> don't get a base trunktracker scanner, you'll regret it. with a
-> handheld, you get the same scanner with the exception that you can
-> take it w/ you when you are out of town, vacations, etc........
-> I have a pro-90 and i love it..

A) With the Pro-90, you paid more, AND got only one battery. It's hard
to take YOUR views seriously just based on that.

B) The base TT has a signal strength meter, tuning dial, CTCSS
capability, and more. It's a FAR better radio overall.
```

hi I am currently the proud owner of an aor 2700 and I was thinking about purchasing something that will pick any frequencies that are been transmitted in the local area.
But I don't know which is the best one the scout is nearly £250 more than the cub and to me it doesn't seem that much better.
I would also like to Know how effective these machines are i.e.. will it pick up aircraft that are within scanning range that are transmitting to local airports?
If you could help me please e-mail me at rayt@globalnet.co.uk
Thanks phill

No! That mod never did work correctly, the key to the space shuttle mod is to use chicken BONES. More specifically; you need to replace D502 with a properly sized chicken bone.

66. Writing BC895 software - any suggestions? (long)

Newsgroup: rec.radio.scanner
Date: 1998-03-01 00:00:00 UTC
From: no.spam@for.me
Message-ID: <76AAF04BE7CCC4A1.C4BC055FB85B9E77.1878B974C9904D45@library-proxy.airnews.net>
Source record: 168752
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I am writing a new program called FreeTracker - a Windows95/NT app
specifically designed for the TrunkTracker 895. And best of all, it's
free! Expect to see version 1.0 in a couple weeks.

Does anyone have feature suggestions?
Here's what is currently available:
(pics at: http://www.webcom.com/autownet/freetrack.html)

1. Supports up to 5,000 "Virtual Channels" which are like the radio's
normal channels, but add Callsign, Description, Color (for activity
log), Alarm, location, Ctcss, hit count, line, delay, and lock status.
VChannels can be scanned (20 chan per second) for activity.

Descriptions:
You can store Descriptions, Callsigns, and Locations for frequencies
or Trunk talkgroups/ID's. When that freq/talkgroup appears, a
description is shown.

Alarms:
A Wav file can be assigned (or speaker beep) to certain
freq/talkgroups, or a .RTF file that pops up while that freq/group is
active. For example, have all local police codes shown when a certain
police channel comes active.

2. PerCon database lookups from their web page (stored as html) can be
imported. (Dbase import comes later)
btw: Can someone please send a *SMALL* exported database file from
their PerCon CD? I need to see the format, so I can support it.

3. Activity log is color coded - you can assign any color to any
specific freq/talkgroup, plus bolded text.
4. Search Ranges - you can store up to 2,000 search ranges, and
double-click them to activate an immediate search of that frequency
range.
5. All BC895 keys are supported, allowing a virtual radio on your
desktop.
6. FreeTracker can be minimized as a TrayIcon, with a feature-rich
right-click menu for easy access to popular functions.
7. Database-editing in a simple grid. Click the record you want, and
change any value.
Menu allows selecting any record to zoom to that frequency.

8. Communicate with your radio interactively - type any command in,
and see the response.
9. Power users can utilize the quick-command box. Simply key in

simple words to change frequencies, channels, scan, hold, search, manual, etc.
Example Syntax:
f15189 tunes radio into frequency 151.890
c56 takes scanner to channel 56
Up arrow emulates SCAN key
Down arrow = Manual
Right arrow = Search
Left arrow = Hold
... plus about 50 more commands

10. Export all scanner channels/freqs to a text file, then import back into the scanner at a later date.
11. Complete logging to a file, or printing just about anything.
12. Export your VChannel/talkgroup database to a HTML file for posting on a web page.
13. Top 20 frequency hits organized into a right-click menu for easy access

Later Features I'm adding:

a. Scheduler - activate an event on a date/time, when a certain activity happens, or a specific freq/talkgroup. Anyone have a preference for what kinda events you want scheduled??
b. Charting of hit counts, time online, etc.

Aw Man...

Its not a chicken bone....its a GIZZARD!

....a bone, what were you thinking?

The Gizzard will also allow your scanner to receive iDEN xmissions, Motorola ASTRO communications, and, of course, allow your scanner to trunktrack EDACS systems.

Also, as an added bonus, Gizzards also allow you scanner to decode DES/DVP transmissions as well.

.....so next time you see a gizzard. SAVE IT FOR YOU SCANNER>

Hello,
Well, I installed the Omni yesterday, and am very impressed. With a cable run of RG6 for 25 feet feeding a splitter, I am hearing weather stations in excess of 150 miles from my location outside of Pittsburgh. Advertised for 25-1000Mhz coverage, I find optimum reception on vhf aero and up into 800 to shine. Light and instant snap open assembly, the Omni is simply a dipole, cut at a high multiple for wide band reception. I'm pleased with the Omni, and can't wait to errect (love that word) my scanner beam.

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscrition services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase costs $34. CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/.

FCC

The database is also available from the FCC for free. It covers most services but not all. Sections can be downloaded, processed with a supplied Visual BASIC program, and viewed with Microsoft Access. The entire database is approximately 3 GB in size. See:

http://www.fcc.gov/oet/info/database/raeddf.html

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/.

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com, or http://www.perconcorp.com. The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been merged with its sister publication, Beyond Police Call, and now includes a limited

selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

| PRO DATA

| Pro Data is a database manager program for license data. It does not come
| with its own data but can import data from APF, Percon, ScanWare, and
| UFDBF database files.

| Pro Data costs $60. For more information, write to prodata1@gte.net, or
| visit http://home1.gte.net/prodata1/index.htm.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 630-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. Current data is for first quarter, 1996.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See:
http://www.wvsc.wvnet.edu/~fcc/index.html

APPENDIX

Here is table of data fields in the FCC master. Fields provided by various products are indicated by "#" or the field length, if known.

The squeaky wheel gets the grease. If you persist, you're liable to
really piss Michael off. That might be unwise, particularly with me
on his side. We have often been at odds in the past, but I am in
agreement with him now regarding the status quo of this news group.

Currently still have an Icom R71E with G5RV and Diamond wideband vertical
antenna. Have owned Heathkit rx, some crappy VHF/UHF Tandy jobs...also
FT767, Kenwood TM-732E (still in use) which is modded for increased rx.

>
>> with the right antenna...picks up from 0.05Mhz through

>

See above...the Diamond wideband vertical (model number slips mind!) has
built in masthead amp, and covers roughly 1Mhz to 2GHz.
The supplied Icom antenna with the PCR-1000 is totally crap, and is better
suited to be installed on a nice medium wave tranny radio!

Hi,

I would like to hear from european peoples (preferably belgian peoples)
who have ordered scanners from bander.com. Mainly because I would like to
know if they had problem to get them. I mean shipping delays, scanner "lost"
(never shipped), because I don't want to be cheated, you understand me !

Thanks for your help,

Stephane Schmitz

Hmmm....Maybe his Beta Test was to find out how many buffoons would
send him money in hopes of getting something for next to nothing?

The Yupi 9000 is a good radio but is very very picky about what antenna is used for the freqs you are scanning. Watch for serious intermod problems on 43-49 Mhz.

It is extremely sensative and comes with an attenuator built in... I also bought a radio shack tv-type attenuator with adjustable att. know for 6.99 and it REALLY helps alot.

One more time.... The best freq. data base around is at
http://www.wvsc.wvnet.edu/~fcc/

You have to download the database engine and instructions and the
frequency files for the area you are interested in. It takes a little
work and a little intellegence but is well worth it.

Source record: 168795

It has been determined that Bill Cheek suffers from OCD (Obsessive Compulsive Disorder). Some medical experts also feel that Cheek is suffering from schizophrenia. Sometimes delusions in schizophrenia are quite bizarre- for instance, believing that someone is controlling the schizophrenic individual's behavior with e-mail, or that people in newsgroups are directing special messages specifically at him, or they are posting his thoughts to other people.

It is important that we understand this debilitating illness and how it affects Bill Cheek. Please donate funds to your local charity which treats mental illness, in hopes that the general public can understand , deal with and treat Bill Cheek's problems and how they affect the newsgroup abroad.

Announcing new MDT1234 with Gizzard mod.

No need to feel cooped up! As Lindsay mentioned, the new software will decode MDC-4800, POCSAG, FLEX, iDEN, EDACS, CDMA, TDMA, SMR, DES, DVP, TEMPEST, and the rest of the alphabet, and will convert it to ASCII and display it all in Windows, all in the comfort of your own roost. And that just scratches the surface.

Is your soldering profiency for the birds? A new interface is available for a buck, buck, buck, so don't get your feathers ruffled.

Local police agencies are crying fowl, but they only have egg on their faces as the project has already taken flight. Hard-boiled investigators are reportedly scrambling to put a lid on it.

Don't be a chicken; download it today. Dozens of users have already flocked to the web site, and have been crowing about it ever since.

I see. Well, I am happy that you have at least
formed a personal opinion. I wouldn't attempt to
deprive you of it.

> At one point in time I felt
> that you were an icon of the scanning hobby and had made much progress
> in making the hobby in what it is today. Now I feel you are nothing more
> than an old sour man who has found nothing better in life than hate and
> discouragement.

May I invite you to RE-READ *your* first post to this
thread....and then you tell me what in it I was
supposed to find so lovable and joyous? Once again,
Simmont, I never did anything to you and never said
anything about you......until you opened fire.

Keep that in mind. Don't lose sight of it as you
nail your fine opinions to the bedrock.

> To continue in this newsgroup war would be as productive
> as spitting in the wind.

Spitting? I can think of worse things to do into the wind.

> My orriginal attempt to draw some common sense to the disagreemnet
> was not successful and seems to only have wasted my time.

"Common sense"? You have got to be kidding? So once AGAIN,
let's take a look at your "original attempt at common sense":

>-> Ahhh, I see Mr Cheek does not approve of the Sportcat 150, must be
>-> becouse there aren't any cellular mods for it and thus cannot profit
>-> from it in anyway by selling more books.

You call THAT common sense? Geezus H. Kriste, man, what
tribe do you come from where that kind of spew is common
sense? PLEASE address this question. You waltzed right

out into a hobby forum and took a potshot at my livelihood.

What if I did that to you? What if I did a little
research tomorrow and got on the hook to your employer
and besmirched a few little sweet nothings to the Head
Cheese? It wouldn't be difficult, pal. But you would
think that to be wrong of me, wouldn't you?

You don't play fair, Simmont. You think you can sachet
out here and take a swipe at me and that it's wrong of
me to take exception to it?

ALL I WANT YOU TO DO IS EXPLAIN YOUR BASIS AND FOUNDATIONS
FOR THIS VERY PECULIAR SENSE OF 'FAIRNESS' YOU HAVE.

> So insted of wasting anymore time in a battle of wits with someone
> who is only half qualified, I will choose to ignore your postings and
> continue on to something worth reading.

That sounds like another strictly personal choice. Why
task the newsgroup with it?

> If you choose to continue to bash me as you seem to
> like to do with everyone else, go right ahead,

How the hell have I bashed you? I'm still in the
QUESTION-ASKING stage, trying to find out where the
hell you came from; what high horse you rode in on;
and where the hell you got off.

And besides all that....YOU took a bash at me, Jerkov,
so why the hell don't you think you got one coming back?

> I just won't give you the honor of an arguement any longer.

Well, then, you are a yellow coward. There is no argument.
Not yet. I just want you to explain the fairness and
equality of your first post to this thread. Tell me why
I shouldn't take offense at it.

And then consider all the other points I made.....such as
how IN FACT I *did* publish material about the SportKitty.
You seem to refuse any and all points of logic that I
have introduced....and I have introduced quite a few.

You won't address a one of them. There was your chance
to get into a straight, sane, sensible discussion, but
OH HELL NO.....you had yourself an axe to grind from the
very gitgo when I made an unfavorable, but straight comment
about a Uniden scanner....apparently one that is a part
of your anatomy somewhere..... Geezus, man, I wasn't
talking to you and I didn't know you used the SportCat as
a prosthetic attachment. How could I have known?

> Hopefully when
> someone is seeking scanner advice, and you give it to them (God help
> them) they will seek more than just your advice.

I hope they do, too. I always recommend second opinions.
It's no skin off my nose, Simmont. I tell it like it is,
in most cases, and like I see it in the rest. There are
never any strings attached.

Now come down off your high-horse and pompous, sanctimonious
throne and explain yourself.....and address the factual,
logical points I put to you in ALL of my posts to you thus far.

So long as YOU stop the bashing that you STARTED, I won't
feel any need to continue it. But I do feel the need to
get to the bottom of this shit that you injected, and I
am NOT afraid to deal with it and ANY other relevant issue
RIGHT HERE IN PUBLIC. Why are you afraid?

YOU started it here in public. So let's finish it here.

>brainpower, in my estimation. Your "agreement" is to attack anyone who
>criticizes Cheek. Is that important for this news group?

I doubt that there is anyone in r.r.s. that would consider me a Cheek clone. And I don't think that it is my responsibility to attack anyone who criticizes him.

I certainly haven't spent as much time attacking the "anti-Cheek" factions as you have been attacking "pro-Cheek" factions, in any case. I'll conclude from that that you are much more intent on telling everyone else what they ought to do and reserve some special circumstance for yourself. It's ironic that you are engaging in the same sort of antics that you condemn in others. The hypocrisy is startling to say the least.

Since you seem to know what is important for the newsgroup, tell us how things ought to be around here. For me, I would say that posting a few messages about scanning and a few messages bitching about one thing or another wouldn't be so terrible. How about you, do you have anything to say about scanning or are you just here to bitch and cause trouble, because that is all you have done so far.

A search of that term suggests you are the FIRST and ONLY
one to use it and to introduce the concept. So one wonders
if you somehow have the stirrings of a guilty conscience.

Like George said, you should just confess.

Noticed the PC serial port has to be connected to the ICOM PCR-1000 or the radio shuts down. For just listening, I would like to stop the radio task and simply listen.

Maybe a simple RTS pin held high?

Thanks, Joe

>
> > If you like a lot of sizzle and not much steak....sure.
> > Otherwise, no.
>
> What a magnificent statement!

I thought so, too. Thank you. Short. Sweet.
To the point. A little humor added. Straight.
Yeah, it was kind of magnificent, now that you
mention it.

> I am sure that answered all of his questions.

Well, it was succinct and to the point. He seemed
to have appreciated it. You and a few others to
whom the reply was not directed appear to not have
liked it.....but then I didn't tailor it for you.
I tailored it for HIM. Everything I write in these
newsgroups is tailored and constructed especially
for someone. I don't know how to address and reach
everyone. I am not a good preacher. But when someone
asks a question, I tailor my reply to THAT person.

Not you. Not unless I'm addressing something you
asked or stated. Like now. :-)

The quality and quantity of my replies are more or
less geared to the Q & Q of the question. Some
people don't want a lengthy dissertation....just a
word or two. The questioner appeared to be one such.

> If I was new to the hobby, what would that tell me?

If you were new to the hobby, then you would or should
state it, right? He didn't. So how do you conclude
that he was a newbie? I can't. And I've been in this
hobby for over 30 years....going on 40. But teach me
how to make conclusions like that. I'm all ears.

> If you were new to scanning, (I have no idea if the person who asked the
> question is a "newbie" but lets just say he is) could you make a good
> decision based on that?

Huh? I don't know about you, but I don't have time
to formulate needless verbosity based on "if".

Communications are a 50-50 sort of deal. The questioner
is responsible for including as much info as will support
the reply. I addressed the man's question. You didn't
like it, perhaps, but just remember that I didn't address
it to you.

> How about "It is a good starter radio if you can
> get one cheap but here are some other alternatives." Doesn't that seem a
> bit more productive and constructive?

THEN why didn't you answer him in that fashion? Why
was I supposed to think and act like you? You and me
are headed for the races if you think I'm going to
sit round here looking to meet YOUR expectations.

> Then a response about mods and it is off to the races.

Well.......??? Whaddya expect?

> Flame after flame after flame.

Where? I'm still trying to get Simmont to explain
himself. The flames can come later. Right now, he's
running like a scared rabbit......so flames won't do
much good at this point.

> What good does that do?

What, flames? Don't be so shortsighted. They can do
a lot of good. But there haven't been any yet to
speak of. Not in that thread anyway.

> All this mess because some poor fellow made the mistake of asking a
> simple question and received a simple answer.

No, that is not the cause. Reread the thread.
I answered the fellow's question. Simmont jumped
in and attacked my livelihood. He was totally out
of order. No merit whatsoever.

But anyway, don't simple questions merit simple answers?

> If this person is a newbie,

If the dog hadn't stopped to take a poop, he'd have
caught the rabbit. How do you know that dude was
a newbie? If he was, he shoulda said so. He didn't.
So he probably wasn't a newbie.

> he would do better in another hobby then to get involved with
> the likes of us.

Maybe. Maybe not. How can you pretend to judge that
for HIM? Are you inferring that he is an imbecile
and needs a snot rag and a feedbag?

> With all of the talented people that are connected to
> this newsgroup, this could be the greatest place for info. All it
> resembles these days is a grade school playground.

Well.....that's your opinion. But one thing that goes
far above and beyond "opinion" is that YOU failed to
address the fellow's question about SportCat scanners
being a good buy. You didn't say anything at all.

Why not? You seem to have all the answers. Instead
of lecturing, how's about teaching by EXAMPLE ?

Why don't YOU waltz your heels out there into the arena
and show me how it's done?

I'll watch. And take notes. And be ready for a test.

I don't mind anything within reason discussed here.

The fact is we have no record of Tyler's claim
that he sent us a "few bucks". He's lying or
stretching the truth or is thinking of someone else.

For one thing, we don't charge money for beta test
participation. Typically, we ask for a SASE and
an extra stamp, maybe. Not money.

In any case, there is no record of Tyler ever
having contacted us, much less sent any money,
stamps, SASEs or anything else.

Tyler is a lot like you, though - horney for me
and wants some of me real bad.....and gets pissed
when told I'm not that way.

There are several possibilities that could fit into the
requirements that you have conveyed. Unfortunately to get something
new and be able to unrestrict the FCC imposed frequency blocks is
impossible (well next to, but out of the realm of this discussion)
unless you happen to be FCC certified or approved.

(1) If you don't need to have the full coverage (cellular) then I
would suggest getting the BC895xlt. It is a TrunkTracking scanner that
is made by Uniden. It can be had for around $300. It has good coverage
range (including milcom) and is readily able to be interfaced by your
computer. I just got through reading a post on the newsgroups where
someone plans to have a very nice freeware program available to run
this scanner. Right now there are several freeware, shareware and
commercial programs out there that are nice products also. I would
take the time to look at Rich Well's webpages. Rich has put up tons of
information on scanner's that he has bought himself or evaluated
friends scanners. There is no commercial backing...just plain
honest-to-goodness info. Look at Rich's pages at
http://www.qsl.net/n2mca/RADIO.HTM. If you just have to have the
extended frequency ranges with this...then you could add on a
frequency downconverter externally. When you upgrade down the
road...you won't be stuck with blocked frequencies again.

(2) I have a Pro-2035/OS535 and a Pro-2042/OS535 setup which I really
like. I run them under Probe and some other programs that were either
written by me or some friends. I have the unblocked OS535 boards in
these scanners since Im FCC certified and use them in cellular
communication configuration and repair. These scanners are quite nice
even without the interfaces. If you didn't have a OS535 interface

installed, I would suggests installing a relatively inexpensive interface called the PROgramit. The PROgramit allows downloading of the channels/frequencies from computer databases to your scanner. Another nice application is the IR Remote Control module that you can have hooked up to the PROgramit interface. It allows you to use your various remote controls to operate your scanner across the room and even control the volume, etc. I have seen the Pro-2042 marked down a few times and has also been recently on sale. I suspect that the scanner will be on closeout before too much longer. The scanner doesn't have trunktracking capabilities but there are some freeware, shareware and commercial applications that allows this if you have the OS535 boards installed.
OS535: http://www.optoelectronics.com/optoscanzone.htm
PROgramit: http://www.qsl.net/ka2pyj/
Probe Software: http://home.ptd.net/~pro2006/probe.html

(3) Another possibility would be getting a older model Pro-2004, Pro-2005 and Pro-2006. The latter two are capable of having a OS456 interface board installed in them and operated throught the computer. All three can have the CE-232 and PROgramit interfaces installed. The CE-232 interface allows complete control of the scanner through the computer. The building of the CE-232 interface and installation is a bit more than what the novice probably should take on though. It is unfortunate that some of the replacement parts for these scanners are not as readily available as they once were. That is one of the drawbacks along with once you buy a used Pro-2005/6 you have tied up the same amount of money that you would have in a BC895xlt and you haven't even started getting into the computer interface whereas the BC895xlt already has a full featured one installed and the scanner has trunktracking capabilities.
OS456: http://www.optoelectronics.com/optoscanzone.htm
CE-232: http://204.210.9.135/

Another thing that might be an interest to ppl that are using "mobile" units is the RF-Link module that is going to be possible for the PROgramit interface. You will be able to download frequency databases from your computer to your scanner while it is still mounted in your vehicle from a couple of hundred yards away....sounds pretty cool!!!

I think that you would be really interested in option #1. You can be up and running with a brand new scanner complete with quite a few nice features for around $300. Computer interfacing is only a cable that can be made/bought for a few bucks. All of the scanners that I spoke of are triple conversion and have the power requirements that you considered. All are nice units and can all be expanded/interfaced. Good luck with the decision making! Report back to which way that you sway.

Wiggie

There are a few options about getting a Voice-Activated recorder. I
have been happy with a few shareware programs that allow you to use
your soundcard to record to a time-stamped .wav file. I would suggest
looking into that first to see if it works for you before I shell out
the bigger bucks for an actual tape recorder. I know there are other
vox software recorders, but I will mention RecAll and WinTone.
Registration of these programs will run you about $15.
RecAll: http://www.sagebrush.com/~sells/
WinTone: http://www.steaksandwich.com/

I always wonder why the mfgs put so little effort in the antennas they
ship with their radios. I have a never bought a radio that had a decent
antenna that came with it. Go figure. Guess they feel you already bought
the radio so they don't need to impress you any longer.

Oh but the Sportcat IS mentioned in The Ultimate Scanner book, but
it was mentioned that there were nothing avail. for it as of yet, and that
as it looked there would be nothing. But what I find AMAZING is that
Popular Electronics did a column on taping into the SC-150 for un filtered
audio, and a few other tricks that are VERY nice after done correctly to
the radio.

So, yes Bill "I show my true self as a child" Cheek you DID "mention"
it in your book, at least the copy *I* have. And see, you took care of what
I was trying to prove in the first place, any decent human could have gave
an answer (just as the other users said) that was professional and on topic
WITHOUT throwing down on me, see I DIDN'T insult you AT ALL I mearly said
that I "thought" Bill Cheek to be a different person until I came here and
now, I would rather use the book, and any reference to Bill Cheek as a note
to remind me of this arrogant, obnoxious, rude ass that he really is.

Quote begins here----------------

Exactly the Sportcat 150 is NOT mentioned in any of your books and you
seem to have a certain dislike for the scanner. I think I might be on to
something here but no modifications for the scanner so you discourage
anyone from purchasing it...

Well Sir I don't think we need to get into a name calling game here or
any other childish games, but I do believe you were more involved in
this circus long before I entered my two cents worth.

Well where do I get off spouting my "brand of bullshit" basicly just
denouncing your own brand of bullshit which is nothing more than than
that. Seems that the problem is you just cant take a critic. Somebody
disagrees with you and its an all out war. Personally I know I have seen
plenty of the BS postings here and think its time that we all realized
what we are subscribed to this newsgroup for.

This is a military police newsgroup. Two brothers, albeit civilians, gave their lives during the course of their duties. It does not diminish the heroics of non-Policemen to focus on these brave policemen. But on this news group the focus is on law enforcement personnel.

The Joe Blow you mentioned would have not been out the night these two policemen were. He would have been home watching TV "until the weather lets up". These men did not have the option of waiting for the weather to clear up. They had a duty to perform.

>I in no way wish to minimize their deaths, but I fail to see any

FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner. The author writes a monthly
"Scanner Equipment" column for Monitoring Times magazine,
published by Grove Enterprises, but views expressed in this
article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies
is the Police Call Plus, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's 1992 book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

Cal Crystal Lab Inc.
1142 N. Gilbert St.
Anaheim, CA 92801
tel. 714-991-1580

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

G & G Communications
9247 Glenwood Drive
LeRoy, NY 14482.
tel. 716-768-8151

Jan Crystals
Box #-6017
Fort Myers, FL 33911
tel. 813-936-2397

Monitor Crystal Svc
124 W Walnut St Watseka, IL 60970
tel. 815-432-5296

Short product summaries for over 70 scanner models appear in
a separate article, entitled "Scanner Radio Review Briefs."
For more information about old scanners, see:

HAMFEST/COMPUTERFEST CALENDAR 1998 - NORTHERN ILLINOIS
last updated February 15, 1998

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, and ARRL for providing some of the information.

MARCH 1998

Mar 8 (Sun) - Waukesha, WI. SEWFARS Swapfest. Info: Mary J. Adams, KB9IFF, tel. 414-358-1003. E-mail: mjadams@execpc.com.

March 15 (Sun): Sterling-Rock Falls ARS, Sterling, IL info: Lloyd Sherman, KB9APW, PO Box 521, Sterling, IL 61081-0521. tel. 815-336-2434, E-mail: lsherman@essexl.com

March 22 (Sun): Grayslake, IL - LAMARS hamfest, Lake County fairgrounds. All indoors. Admission $5 at gate, free parking. Setup at 6 AM, doors open at 8 AM. Info: Dave Gudewicz, KB9KDA, 5 Brigantine Lane, Grayslake, IL 60030. tel. 847-223-1088. (Small fest, but usually interesting - AJ9S.)

APRIL 1998

April 5 (Sun): Madison, WI. Madison Area Repeater Association. Info: Jeremy Charles, N9VHT, PO Box 8890, Madison, WI 53708-8890. tel. 608-245-8890. http://www.cs.wisc.edu/~jeremyc/mara/swapfest/

April 19 (Sun) : Stickney, IL. Dupage Amateur Radio Club, Hawthone Race Course. Hours 8 AM - 2 PM. Setup 6 AM. Info Ed Weinstein, WD9AYR. 7511 Walnut Ave, Woodridge Ill 60517 (630) 985-9256 or check the DARC homepage at: http://homepage.interaccess.com/~geirh/ Talk in 145.250. VE testing at 9 AM. Hourly door prizes. All indoor space reserved with a special table pricing offer that ends March 1st. Tickets: $4 in advance, $5 at the gate. Tailgating, weather permitting. Outdoor flea market spaces free.

MAY 1998

May 2 (Sat), Cedarburg, WI - Ozaukee Radio Club Swapfest, For Information Contact O.R.C. Swapfest Committee, W58 N985 Essex Dr, Cedarburg, WI 53012-1439 or call Gabe at 414-377-2784 between 6:00 and 8:00 PM.

May 3 (Sun), Sandwich, IL - Kishwaukee Amateur Radio Club Hamfest, Sandwich Fairgrounds. Admission $6. Ends at 2 PM. Talk-in 146.73 MHz. Info: Bob Yurs W9ICU, phone 815-895-3219, email: N9ZNA@AOL.COM. see http://tbcnet.com/~jleonard/hamfest.htm (Nice mid-sized ham-fest out in country. Lots of tailgating. Few commercial exhibitors. Always a good time. Fairly good restroom facil-ities - AJ9S).

May 15 - 17 (Fri - Sun), Dayton, OH - Dayton HamVention

JUNE 1998

Jun 7 (Sun), Princeton, IL - Starved Rock RC. info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341. tel. 815-795-2201 (Usually an excellent hamfest. Unlimited space outdoor flea market, some indoor space, though few big name commercial vendors. Crude restroom facilities. - AJ9S)

Jun 14 (Sun), Wheaton, IL - Six Meter Club of Chicago. info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Ave., Downers Grove, IL 60516-3925. tel. 630-963-4922

JULY 1998

Jul 12 (Sun), Peotone, IL. Kankakee Area Radio Society. Will County fairgrounds. info: Don Kerouac, K9NR, 6311 East Flora St., Kankakee, IL 60901. tel. 815-939-7548, E-mail: k9nr@juno.com.

Jul 19 (Sun), Sugar Grove, IL. Fox River Radio League. Waubonsee Community College. For tables, tickets, and information: contact N9UZC James E. Von Olnhausen, n9uzc@amsat.org, (630)-879-3042, FRRL, Box 673, Batavia, IL 60510-0673. (good, small to midsized hamfest. Modern rest-room facilities. - AJ9S)

AUGUST 1998

Aug 2 (Sun), Peotone, IL. Hamfesters Radio Club. Will County fairgrounds. info: Dave Brasel, NF9N, 6933 West 110th St., Worth, IL 60482. tel. 708-448-0580 (Usually an excellent hamfest - AJ9S).

Aug 23 (Sun), Woodstock, IL. Tri-County Radio Group. McHenry County fairgrounds. info: Bob Grosse, N9KXG, PO Box 3107, Skokie, IL 60077-6107 tel. 708-944-0500. E-mail: tcrg@hotmail.com, http://quality-enterprises.com/tcrg/ (fairly good, small to mid sized hamfest - AJ9S).

SEPTEMBER 1998

Sep 19, 20 (Sat & Sun), Peoria, IL. Peoria Area ARC. info: Jim Williams, N9HHU, Box 3508, Peoria, IL 61612-3508. tel. 309-692-3378. Fax: 309-698-8643. E-mail: jimeoc@worldnet.att.net, http://www.w9uvi.org

Sept 26, 27 (Sat & Sun), Grayslake, IL Chicago FM Club. Lake County fairgrounds. info: Mike Brost, WA9FTS, 5127 North Monterey Ave., Norridge, IL 60656-3245. tel. 708-457-0966 (the biggest and best hamfest in northern IL - AJ9S)

OCTOBER 1998

NOVEMBER 1998

NOTES - Computer Central and Giant Computer shows

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (847)974-3123. See http://www.gicancomputershow.com

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna

Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove.net

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

The Scanner Club is the name of a bimonthly magazine published by Les Mattson. It is a successor to the Northeast Scanning News and is the official publication of The Scanner Club, a not-for-profit club organization. TSC's main strength is local frequency information, including CTCSS codes. Sample issues are $4 each. A yearly membership costs $24.95 and includes 6 issues. Write to The Scanner Club, PO Box 62, Gibbstown, NJ 08027 for more information.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the

transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation.

This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages

long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net |

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of

completeness. They are crystal controlled radios and
feature priority scan and a separate trimmer capacitor for
each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from
the crystals used in the conventional single channel
Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a

flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the

microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd

electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic

front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. Abstract

This article contains product review summaries for more than 70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor receivers of various brands in my collection. This article describes a few of the FM receivers in my collection, and other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews and modifications of these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC985XLT Trunktracker
Mar 1997 - RELM MS-200 mobile

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are

287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative

test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks.

Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics).

The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob.

Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature

identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at www.grove.net for a review which includes quantitative test results.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct

channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. For a quantitative test report, see "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout

Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed.

Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in

early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge | AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you

find one in good condition.

Sonar

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes

FR2526 10 X X yes yes
FR2527 10 X X yes yes
FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies

far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by

the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1997 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14 of MC3357 (IC1)
Radio Shack PRO-2002	R197	47K try 220K.
Radio Shack PRO-2004	R148	47K remove R148 or replace with 220K.

I believed that the Department of Justice, (DEA, FBI, IMS, US Marshals, Ect),
was a major subscriber of the SMR/Cellular service providers.

The 162-174 and 406-420 Mhz bands are now a vast wasteland of silence.

If people think they get a better response by posting messages
in their "own" toungue ,it's all right and fine by me...

However,I do believe the response will be better if they post
in english :)

What does the FAQ say about "foreign" languages?

Source record: 168545

Sorry, but you may be mis-informed. NO frequencies are
actually "converted". The only thing the mod does is switch
on the 800mHz bandpass filters when the scanner is tuned
to the 300mHz band. This allows you to RX by an IMAGE
produced from the 1st mixer stage in the 300mHz range.
Get the service manual and look closely at which pins you
jumper and this will all be clear.

That all depends upon the antenna being used.

Get a decent HF antenna, and all the above scanners will give good
results.

Message-ID: <19980302021801.VAA06022@ladder03.news.aol.com>
Source record: 168547

For Sale: 3 nice scanners, listed below. All prices do not include shipping. No trades please. The reason I'm selling is because I have too much stuff now :).

1: Uniden BC-235 Trunktracker portable. I bought it new, have box, manual. Works great. $195.

2: Realistic PRO-2006. This one has the HB-232 mod installed for computer control. Very nice. Strong display light, not weak like some others. I might have the box upstairs in the attic, not sure. The HB-232 is installed in a nice enclosure, and can be disconnected if desired. $400.

3: Standard CCR-708. This is the one with the built-in spectrum display. Includes box, manual, and service manual. Works and looks very nice. 60-905 MHz with no gaps. $450

Contact by EMail if you're interested, I don't watch this newsgroup.

Source record: 168549
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hello everyone. I'm still stuck in the stone ages with a Radio Shack Pro-38 handheld. What I was wondering was, what antenna could I get for this scanner that would boost the scanner's signal reception to the maximum? If someone knows of an antenna I could get for this scanner, that would be GREAT. Even if it had to be run under a seperate power source. Of it someone knows of one that's doesn't need a power source, then the best that I could possibly get. Anyways, please e-mail if you can help me out.

You're lying, Tyler.

For one thing, we don't charge money for beta
participation.

Secondly, we have no record of you whatsoever.

Thirdly, beta participation is usually totally
free, except that when hard copy is necessary,
we'll sometimes ask for a SASE and a stamp.

Not money, you lying sack of dung. Try telling
the truth, or don't you even know what that is?

Ivan, <is it?>

Well, here in Houston we've already lost the right to a jury trial on parking tickets (yes, I know it seems somewhat preposterous) and have only an administrative hearing now.

Looking over some statistics from '96 it would seem the municipal courts brought in 49 1/2 million dollars that year with almost 1.2 million cases resolved. And that with a population of 1.6 million. That's tantamount to most everyone in the city having gotten one ticket that year and paid $30 for having done so. Rough calculations, but you get my drift.

> In fact the Mayor of my jurisdiction told us if we would spend more time ticketing > out of towners, then we would have had a pay raise.

Now why is that I believe I've heard that statement before? <G>

From: Aaron Ceraldi <ceraldi@albany.net>
Message-ID: <6ddfhbnse1@news.monmouth.com>
Source record: 168554

Is there a way to modify my BC9000XLT to add a 10.7mhz output jack for running aa AOR spectrum anilizer ?

169. Orange County, CA 800Mhz Public Safety Radio System: WPAT870

Newsgroup: rec.radio.scanner
Date: 1998-03-02 00:00:00 UTC
From: Steve Felix <"Steve Felix"@home.net>
Message-ID: <34FAEB82.904@home.net>
Source record: 168555
Cross-posted to: rec.radio.scanner,

Orange County's new 800MHz. system is a Motorola type II digitial trunked system. Astro Sabers and STX-3000's will be the portables and Astro Spectas will be the mobiles. The system is very 'cellular' in design and no radio will need more that 7 watts RF output to make it.

Most systems will be digital and render scanners useless - even trunktrackers. All city police and fire and county agencies will also be on this system.

Go to the PerCon frequency database page,
http://www.perconcorp.com/db_srch.htm

The callsign search is a usefull tool because I just need a
simple callsign instead of having to manually type a list of freq's.
For example: search the callsign of wpat870, then print the
list of 35 frequencies.

The new OC 800mhz. System is assigned the callsigns of:
wnss311, wnss312, wnss313, @ wnss314.
The Mutual Aid frequencies are assigned the callsign of wpat870.

The Orange County Fire Authority (OCFA) has the callsign of wqz938,
with freq's in the 856-860Mhz. range.
-

University of California, Irvine has the callsign wnwx380.

San Diego Gas & Electric is assigned the callsigns of wnkv831 & wnkv832
SDG&E utlizes the GE/Ericson system that has the obnoxious
"we bring good things to life" tones at the end of every transmission.
Is the a way to defeat this feature on our scanners?

Regards, Steve Felix

Cross-posted to: alt.fan.police,alt.law-enforcement,alt.law-enforcement.R_C_M_P,alt.law-enforcement.traffic,alt.military.police,misc.emerg-services,rec.radio.scanner

The reason we honor those who have died in the line of duty, even when they die from such prosaic, non-heroic causes such as traffic accidents, is to recognize the fact that they died while serving the common good. Thus, we honor their life, not their death. We acknowledge, at the conclusion of their life and career, the sum total of all of those little acts of bravery, kindness and sacrifice throughout their careers that, heretofore, may have gone unrecognized.

It is enough that they served, and died. They needn't go out in a blaze of glory to be heroes. These officers put themselves out there in harm's way for all of us every day, not just that last, fateful day. This makes them heroes, and worthy of this last small measure of gratitude and respect. God bless them and keep them.

172. FS/trade - Alinco ELH-7400 UHF Linear Amp

Newsgroup: rec.radio.scanner
Date: 1998-03-02 00:00:00 UTC
From: bush143@postoffice.worldnet.att.net
Message-ID: <6ddhmo$bne@bgtnsc03.worldnet.att.net>
Source record: 168558
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.scanner,alt.radio.scanner

Please make an offer for this item, I have no idea what its worth:

Its in mint cosmetic condition; however, operational condition is unknown. Sorry, no box, no manual. It requires a 13.8 VDC power source which is not included. It did power up when I put a power supply on it. I purchased this at an estatee sale with a box of other electronics stuff. I am not a ham, and therefore have no need for this.

The unit is all metal, approx 4" X 6" X 1"
A tag on the bottom of it says "rated input 10W"
The front of it has an "on-air" led, and three push buttons:

1. Mode - SSB/FM
2. RX - On/Off
3. TX - On/Off

I would be interested in trading this for a basic hand held scanner. Please let me know brand and model # on your scanner for trade. If necessary, I will add money to even up the trade.

Be specific. Do you want to know why my post ignores the fact,,,or
why Cheek and his clones accuse others...? Don't get me wrong,
I'm not homophobic. If you wish to remain in the closet, it's your
choice. Hey, whatever cranks your tractor. I just thought that you
might be less hostile if you came out.

There's a group of fellows in Portland you may be interested in
joining. They have similar predicaments to yours and act as a
mutual support group. Some of them post to this news group
occasionally and one of them will probably be in contact with
you. HTH

Good results, yes. But using the same antenna, the dedicated
HF will still outperform the HF/VHF/UHF radio. Especially
when it comes to images.

Connect a decent HF antenna to the Yupiterus, Alincos or
Welzs and they are almost useless due to excessive overload
imaging. AOR and iCOMs handle it better but are still
subject to more of the same.

If you are _serious_ about using such a radio for HF, then
be prepared to lay out some extra $ for a preselector.

> away from it. Thanks

R10 is a nice radio but is too quirky and slow for most people.
Or in other words, most people will be happier with the AR8000.
But while the R10 is 'quirky', the AR8000 is complex due to
its keystrokes and large number of features. AR8000 is not
built as well as the R10 either but it is the superior
receiver.

I have written reviews of both. If interested, go to my home
page below, follow the radio monitoring link, page down to
my table of receivers and click away.

Good luck and happy reading!

: the frequencies. Any help would be appreciated.
: Thanks in advance.

: Paul.
: paulgm@mailexcite.com

I assume that the TK801 is the UHF version of the 701. This radio does not program like the TK705 whre you move a jumper and use the front panel. It has a 32X8 PROM. I have a 701 and its service manual gives the procedure for determining what data you need to put in the PROM for the desired freqs. You then use a standard PROM programmer to program the device. The PROM can only be programmed once so you need a new PROM each time you want to change freqs.

Good hunting,

Greg WB6UHH

I would consider a WWW search and then if you don't find what you are looking for ask some specific questions in the newsgroup.

> Are they all different?

Yes they vary from state to state, city to city, well you get the point.

> If they are, Are there any tricks that anybody
> knows to breaking them other than common sense?????

Become a police communications person.

Make friends with a cop.

Break into a cop car when they are on break and rifle their belongings for information.

Commit various offenses and listen on your scanner for YOUR call and see what codes they use.

Just kidding. Listening and common sense will get you far though.

213. Problems with my RS-2036

Newsgroup: rec.radio.scanner
Date: 1998-03-02 00:00:00 UTC
From: Christian Ricci <cricci@diac.com>
Message-ID: <34FB9EAD.7CB509D0@diac.com>
Source record: 168599

Hey all,

I'm having some problems with my 2036, maybe one of you will recognize the problem and can help me decide what to do with this beast.

A little while ago, I lost a good two-thirds of the functionality of my scanner:

I can tune (key or dial) to specific active frequencies but won't hear anything. I can scan between two frequencies but it won't pick anything up. Also, my WX scan doesn't work.

However, if I program a frequency (any of the frequencies that should've worked, above) into a bank and scan my banks, the scanner works just fine (as fine as a 2036 will....). I think that I may have also lost some of the range as well. Frequencies that once came through loud and clear only break squelch now.

I had tapped the discriminator for some digital stuff but none of these behaviors seem (to this idiot) to be related to a fried discriminator. There is no evidence of a short circuit (of the smoky kind) on the board....

Does anybody have any ideas of how to further isolate the problem (and maybe get it fixed)? I'm open to suggestions.

~chris

PS - I'm also looking for antenna ideas (indoor, apartment building, near computer equipment..... hmmmm... sound's like a lost cause...).

Nope, not even that is different. All 9600s did/do cellular.

Remember that a brand new '65 Mustang sold for $1795. Try
to find one for that little today.
But it's not really relevant to this discussion.
The FRG9600 ain't no Mustang...more like an Edsel. :-)

If anybody really wants a $500 FRG9600, I could be
persuaded to make mine available...

ive got a pro-39 as well and had the same problem- what i did was to get
little bits of alumonin foil and and put them into the rubber pads and
the they act like new contact points- they work like brand new now! just
make the bits of alumonim small enough to get inside the rubber keys-
and flatten them out as well- ive had them in for 3 yearsand ive never
had a problem- kelly

I have a very nice Radio Shack 2004 scanner that has the three common mods. Comes with the manual and antenna.
Also has the aftermarket label over the number keys to show the extra memory.

Would like to trade this for a piece of Drake gear. Looking for a R-4C, SPR-4, SW-4, MN2000. Would sell it for $250.

Message-ID: <01bd460d$90e3a880$154122cf@default>
Source record: 168693

Hi...
Wouldn't you know it.. I get a scanner and several months later the local police force switches over to 800mhz Trunked frequencies. Now.. 800mhz I can handle.. but the trunked pretty much messes up all my fun.

So anyways.. I'm selling my scanner it's a Realistic 100 channel, Pro 2040

It gets the following frequencies: 29-54,108-136, 137-174, 406-512, 806-823, 581-868, 896-956MHz

If anybody is interested.. I'm in Calgary, Canada and am taking the best offer. Send me e-mail at the above address.. but be sure to take the spamguard out of it.

>come off. That is a pretty funny story. Hope this helps
>>>

I'd be careful when following this advice. Most scanner keypads are
simply carbon contacts deposited on the rear of the rubber buttons
(keys).

When the key is depressed, the carbon shorts two contacts on the PC
board behind it.

If you remove the rubber keypad and wash it, you could accidently
remove the deposited carbon and the key pad will not work when
installed.

The same goes for freezing the keypad in its entirety. What you need
is localized freezing. You could try some "freeze-spray" (used by
electronic technicians) to freeze each putty-covered key individually
in order to remove the putty.

I would then use a hair dryer of heat gun to remove any moisture
("frost") before proceeding to the next key. Be sure not to hurry and
don't apply too much heat!

Almost anything you can do to solve this problem has an equal chance
of damaging the keypad or scanner if not done correctly and carefully!

Steve

> Can anybody help me with that ?

Well, you'll have a problem with that, because
no one in their right mind would sell one out
of a working scanner.

But if out of a basketcase, you'd not know if
the Logic/CPU Board was the main fault.

The best bet is to contact each regional service
center for Radio Shack and see if they will sell
you one.

chuckiex@ibm.net (Charles McCallister) writes:

>Rereading your earlier post, I wanted to know what Special Ops 460.350
is
>mostly used for. Would you know?

Charles,

Special Ops is usually used for police escorts, accident dispatches, parades, and like events. I monitor this frequency to catch the calls for Fox units because there is usually less traffic. I can catch the incidents I am searching for with out a lot of DL checks, license plate checks, etc.

General broadcast calls for the Fox units go out for car chases, robberies in progress, bank robberies, or crooks (actors) on the ground on foot running from the PD units. Sometimes after a bank robbery special ops will be used by the PD units trying to find the radio transmitter placed in the money bag by the bank teller.

Special Ops is also used when a domestic or foreign dignitary is in town. This is usually some pretty interesting monitoring. During these events Special Ops will be "down", the dispatcher's way of letting police units know that only traffic relating to this event is to be broadcast on this frequency. And, if you are on the road alot like I am it helps to know what roads are closed.

Hope this helps.

Randy

Yeah, and when he posts 300 such messages, he gets about 900 followups
from people like you. If everybody ignored him, he'd disappear, or
post on topic. The fact that you went to all the trouble to count all
his posts indicates that you're as sick as you think he is.

Most of the posts from "iwstirnm@bigfoot.com" originated from the EPA site
in the Research Triangle area of NC. It appears that "iwstirn" is a government
employee who works for the EPA and has been spending lots of government time and
money (your Tax Dollars at work) flaming various news groups during working hours.
There are also several posts that were made via IBM.NET in the Research Triangle
area of NC at the following subnet 129.37.240.xxx (slip129-37-240-xxx.nc.us.ibm.net).
I believe that the real "iwstirn" in located in the Research Triangle area of NC
and some of his recents posts at the following subnet 129.37.130.xxx
(slip129-37-1300-xxx.wa.us.ibm.net) are most likely an attempt to hide is
true location by dialing into a IBM.NET POP located in WA state.

It would be very interesting to see what his employer thinks about his USENET activities
during working hours using govenment resousrces at the EPA. (Your TAX DOLLARS!)

By the way "iwstirn" has also posted under "wmgeoewald@juno.com" back in July of1997
from the same EPA IP address 134.67.118.48 (rt-ecao-host36.rtpecao.epa.gov). In
some of his post from last year he used an Organization line of "KD4EUW". Could this
be his Amateur Radio Call sign???

Search results for "KD4EUW" on http://www.qrz.com/

Callsign: KD4EUW
Name: WILLIAM G EWALD
Addr1: RT 2 DEER RUN 9
Addr2: APEX NC 27502
Country: USA
Class: Tech Plus
Effective: 17 Sep 1991
Expires: 17 Sep 2001
Location: 35.713 N 78.821 W Wake County
Email: EWALD.WILLIAM@EPAMAIL.EPA.GOV <*** real EPA E-mail address!!!

What's ironic is that you don;t follow your own advice. You readily respond to off topic posts. Why should Glenn be any different?

When someone posts hundreds of messages within a month or so, aren't you curious to know what they are about? Since it's no big deal to find out how many posts a person makes, you can hardly call it a sickness (not unless you happen to be grinding your ax and out to make a point, no matter how weak it is, which is what you seem intent on doing).

Hey, that lame-brain Strin has posted close to 200 messages since the beginning of the year, with only a few on- topics. Check his postings in other NGs, and you'll see that he uses the same MO there as he does here.

You're right, of course. If everyone did post on topic, Mackey and his ilk would go away. They never have anything to say about scanners.

I'm standing and applauding. This looks like a good piece of sleuthing work.

When this whole identity thing came up, I checked dejanews and saw that he's been having a run in with people on other newsgroups and they too have pointed out that he's a government employee. I wonder if anyone has ever complained to his IT department? The other thing I noticed is that none of his anti-Cheek/pro-Mackey diatribes have been cancelled, although most everyone else who posted to threads about Cheek or Mackey had theirs cancelled. I wonder why that is?

Hey William, can you give us a few secret EPA freqs?

>derrik_@yahoo.com, or derriks@webtv.net

Usually the contacts just wear in time on the back of the rubber
keytop. It is best usually to replace this instead of trying to clean,
scrub, etc. the contacts because you mainly make it even worse off and
can damage the graphite contact areas on the keypad. With the Pro-43,
I find that it is usually about time to replace the charging power
jack and the headphone jack about the same time that you replace the
keytop (rubber keypad). You should be able to order this directly.
Right now I am not able to pull up the correct website since
they seem to be overloaded at the time, but here is how to get to it.
Go to http://support.tandy.com and click on something like electronics
then communications and then scanners. Click on the info for the
Pro-39 scanner. There should be a detailed parts listing. Over in the
right hand column should be a RP# or RSU#. Find the right one for the
'keytop' and call 1-800-THE-SHACK or the number listed at the top of
the detailed parts list. I think that last one that I ordered for a
Pro-43 was $5.91 plus s/h. It will be to ya in about 3 days.
Another way to fix this would be to use "Loc-Tite Rear Window
Defogger Repair Kit" it can usually be found at the local Wal-Mart or
auto-parts dealer. It is a conductive resin that you can coat on the
contacts of the keytop and then you let dry overnight, etc. The bad
bit is that the bottle costs a pretty penny ($11.00, not too bad, but
more than the keytop) and usually dries out before you get around to
repairing other remote controls or when the rear window defogger
actually decides to go bad.

Wiggie

I'm not familiar with the unblocked FRG9600's but didn't
the regular FRG9600's sell new for about $459?

Is the only difference with the unblocked model in the
CMT in the 800 MHz band?

Yes, that is pretty close to what I remember. The video detector
board sold as an accessory for the astounding price of $25.00US.

> Is the only difference with the unblocked model in the
> CMT in the 800 MHz band?

The FRG-9600 is a pre-cellular ban radio. It had continuous coverage
of 60 MHz to 905 MHz. The 800 MHz range was not blocked.

A laudable sentiment, Toilet Boy, even for you. However, when one stops
to consider that you, and you alone have been responsible for over 90%
of the rancor in the alt/rec.radio.scanner groups for the last two
years,
your statements are laughable and reek with hypocrisy. I would expect
nothing less from you, Toilet Boy.

OB On Topic: ScanCat, the best software for scanning around. No
connection
with the company, just a satisfied customer.

254. RE: John Mackey Shows His Genetic Deficiencies

Newsgroup: rec.radio.scanner

John "I need Richard Simmonds to pump, pump, pump me" Mackey lied:

> If i could see you were consistant & fair I probably would post the
> data you request. For example, the SAME info you refer to has
> been requested from Cheek for nearly TWO YEARS with NO RESPONSE!
> Yet I have only been requested for this same data for a few months
> & catch all the hell for not giving it when you give Cheek NO TROUBLE!
>
> When you prove you have become fair & consistant I will review the
> situation & decide at that time!
>

You're a liar. I have repeatedly asked you for proof of your degrees for the last two years. Now you have added the need for "consistency and fairness" to prerequisites before you'll backup your claims of a degree with proof. Lame, Toilet Boy, lame.

By claiming that Bill Cheek must prove his degrees before you do, makes your degree claims highly suspect. Requiring an external entity, which you have no control over, to provide evidence before you provide evidence is a diversionary device. You're attempting to divert responsibility of proof from you, to Bill Cheek. That diversion provides you with a reason to not provide the requested evidence; a mechanism so you won't have to prove your claims. It is a means for you to hide from the truth, the truth that you lied.

In view of the many detractors you have in the scanner newsgroups, and the Internet in general, I'm surprised you haven't silenced them by posting your degree information. It would certainly help your credibility here. I surmise that you have withheld this information for one of two reasons.

Reason 1: You really do have the degrees you claim. But, you desire to antagonize Bill Cheek, continue a protracted flame war for the sheer pleasue of it all, and enjoy being a total jerk.

Reason 2: You do not have the degrees you claim. You refuse to provide proof because there is no proof to show. If it was ever proven that you have no degrees as you claim, you would be caught in your biggest lie yet. Since your lie has persisted for nearly two years, you can't afford to lose face. You have to maintain the lie at all costs.

I say it is Reason 2. You've already been proven a liar about your so called technical articles. Adding the lies about your degrees would be within character for you. In the absence of proof from you, there is only one logical conclusion. You lied.

I think you want to have a flame war because you're a sore loser about your treatment on Fidonet. You've never posted anything of value or accuracy, only lunatic rantings. Claiming to have "cleaned up" the newsgroups is another one of your fantasies as well.

You're still a liar and a fraud, Toilet Boy.

BTW, your proctologist called. He wants you to know the window for your navel has arrived, and he is ready to do the surgery. He expressed concern that you're unable to see where you're going and wants to do the operation as soon as possible.

Hey, pull the stick out Glen and take your own advise rather than post
an off topic message. WHY did YOU respond to my post? What was your
motivation Glen? Seems the "900 followups" are more your type of folks,
pointless and mindless.

BTW, I hate to burst your bubble Glen, but it takes about 15 seconds to
"count all his posts". You not knowing this says quite a bit, doesn't
it?

256. My confession.

I just wanted to let everyone know that I am gay. I've been a really bad mood these last few months, as I broke up with my long time lover. Don't worry, I'll be much less abusive now since I've found a brand new boytoy to pump my asshole into a bloody mess nightly again! I'm really sorry about any problems I've caused in the newsgroup! Gotta run, as I have 10'' of manhood calling me right now!!!

Glen has some sort of ax to grind. I figure it must be because I don't agree with every criticism made of Cheek over the past 3 years. If you don't hate Cheek 100% you seem to have every nut from Oregon whining and raising hell. Go figure.

(snip)

> You're right, of course. If everyone did post on topic, Mackey and his ilk

That is why it is so easy to ignore Mackey and his ilk's posts. You never have that nagging doubt that you might be missing something when you just pass them by.

Dear Someone,
Great job!!! Now I`m mad as hell thinking that MY hard earned money paid for this idiot to set on his butt, on MY time, flaming ME. Do you have the name of the congress-man for N.C.? I think a talk is in order.

Thanks again,
Charlie

i just check out http://www.epa.gov and the internet admin's
e-mail address is internet_support@unixmail.rtpnc.epa.gov
everyone should send a complaint the EPA admin to see if we
can get his internet access at the EPA revoked!

You could also use a #2 pencil to reapply the carbon contacts, work's
great.

You know, if I were the honest Larry Murphy in California (I've bought from him with no problem...), I'd still be pissed. The title of this post is irresponsible, and it is what everyone will see - not the text of your gripe about the bad Larry burning you. Next time you deal with someone named Larry Murphy and he burns you, use a title like "Larry Murphy of Podunk, IA Is A Rectal Ofifice Scumbag Shiezter" (no offense, to Iowans - this was just in illustration, no flames please) or something along those lines, that doesn't condemn every Larry Murphy on this planet.

Actually mr fun, if you have ever driven down a Texas highway you will notice that there are white crosses erected along the roadside. This indicates that a person has died in a car accident. So in answer to your question, yes the average citizen does get a memorial put out in his memory.

The problem is in the attitude that if a cop dies, that is his job, and we should not recognize that fact unless he has done something 'heroic'. The fact is that these officers did do something heroic that the majority of the public would ot do. They got up that day and put on their uniforms and went into work.

I can only hope that you can realize that your position only helps to distance SOME officers from the public. If you post here that a family member died in an accident, you won't find any of us telling you basically 'so what'.

Ignoring the BC9000's Alphanumeric display and capable CTCSS, 500
channel memory, and the 895's Trunking feature they are both about the
same. I have sat and watched and listen to them both preform side by
side and there isn't much differnce. Guess it all depends on how many
channels you want if the other factors don't matter. Either way you are
getting a good scanner :)

LA City Council Approves $50.8 Million Motorola ASTRO Digital Radio Communications System for LAPD

LOS ANGELES, March 3 /PRNewswire/ -- The Los Angeles City Council today approved a $50.8 million, six-year contract with Motorola's Land Mobile Products Sector for an advanced, UHF digital, ASTRO(TM) radio communications system for the Los Angeles Police Department.

The new radio communications system is part of the overall LAPD plan to upgrade its emergency communications system. Motorola will install a new communications infrastructure to make it possible for LAPD officers in all parts of the city to use their portable radios to communicate directly with each other and with the dispatch center.

``The new radio system will provide the citizens of Los Angeles with enormous public-safety benefits,'' said LAPD Police Chief Bernard C. Parks. ``It is a major priority of this department to enhance the communications capabilities of the LAPD to strengthen our ability to protect our communities. Police officers will have the ability to communicate across the street or across town, greatly enhancing our day-to-day communications efforts and strengthening our communications capabilities during emergencies.''

The new Motorola ASTRO digital radio communications system will provide the LAPD with a citywide, coordinated radio communications system. Motorola will design and manufacture the digital radio system, providing the software and hardware components for a new communications infrastructure. The Master Radio System will interface with the Emergency Command, Control and Communications System (ECCCS) and the newly planned 9-1-1 dispatch centers.

The Motorola ASTRO system will be a UHF, 57 channel, digital wide-area simulcast system and will be specifically engineered for Los Angeles' varied terrain. With Motorola's simulcast technology, all sites broadcast radio signals simultaneously, improving the radio coverage area.

The Master Radio System will be divided into five simulcast subsystems, which will use 24 sites throughout the City to support more than 9,500 ASTRO SABER III(TM) portable radios used by LAPD officers. The state-of-the-art portable ASTRO radios are dual mode (analog and digital). Once the new system is in place, the radios will work in the digital mode. The ASTRO portable radios were designed by Motorola to accommodate future technology and feature enhancement through software downloads.

``As newer features, technology or systems requirements change, the radios can be upgraded by 'flashing' the latest features into the existing ASTRO

radios,'' said Terry Jaron, Motorola corporate vice president and general manager, Western Division, US and Canada Group. ``The radios were designed to ensure that they would be current with the latest technology and standards in the public safety industry.''

The portable radios will have push-to-talk ID and emergency ID features that help dispatchers quickly identify radios and the personnel using them. Those IDs appear on the dispatchers' console CRT screens and on the displays of the radios. The system implementation is designed to allow portable units to effectively communicate throughout the city.

In November 1996, the City finalized a $8.3 million contract with Motorola to begin the civil site development portion of the contract. This contract includes the construction of tower sites and buildings critical to the installation of the ECCCS or Master Radio System. The installation of the communications infrastructure will begin in conjunction with the civil contract work already underway.

Since Motorola designs and manufactures its two-way radio systems to meet the unique needs of each public-safety agency, this system will be designed to meet the specific requirements of the LAPD. The design, development and installation of this complex radio communications system will take approximately three and a half years.

``The Master Radio System was designed with the capacity to grow and meet the LAPD's needs well into the 21st century,'' Jaron said. ``We are pleased to have the opportunity to support the LAPD's goal of upgrading and enhancing its ability to provide critical services for citizens.''

Motorola also will install a $20 million state-of-the-art data communications system, which will be designed to provide the LAPD with expanded data capabilities, to support today's dispatch and informational data requirements, as well as supporting many new data applications. The new Private DataTAC(TM) system will offer a high level of data capacity to support future multiple data terminal devices and connectivity to national, state and local crime information computers and records management systems.

With the installation of the new voice radio system, Los Angeles will join the growing number of public-safety organizations to install systems based on Project 25 digital radio standards. Project 25 is the functional and technical standard for digital two-way radios created and adopted by a consortium of two-way radio user groups. The consortium includes the Association of Public-Safety Communications Officials-International (APCO), which is the largest organization of public-safety communications officers in the world, the National Association of State Telecommunications Directors and a number of federal agencies. Since the consortium adopted the standard, other user groups including the International Association of Chiefs of Police have endorsed the standard.

The Los Angeles radio system will meet the Project 25 standard for conventional radio systems. This will ensure that a compliant Project 25 radio will be able to ``communicate'' with another one, regardless of the

manufacturer.

Motorola's Land Mobile Products Sector designs, manufactures and distributes analog and digital two-way voice and data radio products and systems for applications worldwide, from on-site to wide-area communications. Motorola is one of the world's leading providers of wireless communications, semiconductors, advanced electronic systems and services. Major equipment businesses include cellular telephone, two-way radio, paging and data communications, personal communications, automotive, defense and space electronics and computers. Motorola semiconductors power communications devices, computers and millions of other products. Motorola's 1997 sales were $29.8 billion. More information on Motorola is available at http://www.mot.com.

thanks Steve I'll give Uniden a try for my Regency manual. as to your problem vise the frequency variation, the Regency is a synthesized scanner so... all the frequencies are based on multiplier/devider chains from a single standard oscillator frequency if that frequency is off then all the frequencies are off. as to Uniden repair, I have read that they mark pre Uniden Bearcats with a U cut into the case and send them back as not repairable... I don't have any corroboration of that just hearsay.

do you know if Howard W Sams has a repair manual for the Regency TS 800 if so it will give information on setting the base oscillator frequency [if setable or if crystal what crystal frequency it uses] if the base frequency is off all scanned frequencies will be off by a proportinate offset [but not necessarially the same frequency, since scan frequencies are multiplied and devided to get the "synthesized frequency"....that is close frequencies i.e. 460.005 and 460.10 should be offset by the same amount but may be considerably different from a 153.005 frequency] --

don't know if this helps you or not, but it may explain the frequency differences between your unit and other scanners.
I suspect my scanner may also be offset but I haven' confirmed yet. I just set search and found repeatable settings for the frequencies I wanted.

278. Ericsson in bell county of texas

Radio giants doing battle over contract
Motorola crying `foul' after commissioners agree to buy Ericsson's dispatching system
By KEVIN FITCHARD

BELTON - After months of negotiation, the Bell County Commissioners Court is set to approve a multi-million contract today for a centralized countywide radio dispatch system.
Though county officials have been emphasizing the need to replace the numerous incompatible and antiquated radio system functioning in the county with the centralized one, their plans have run into some problems from the industry giants vying for the contract.
Motorola and Ericsson are fiercely competitive heavy-hitters in the private radio system business, and the county has found itself dodging the massive footfalls of the two global corporations.
The county is paying $11 million for 800 mhz radio ``trunk'' system, a relatively new radio technology that can link numerous public safety departments over a limited number of radio waves. With 15 fire departments, 14 law enforcement agencies and 7 emergency medical services all on separate and, for the most part, incompatible radio systems, 800 mhz trunking seems to be just the ticket for the county.
Motorola and Ericsson control the lion's share of the market - industry consultants estimate up to 95 percent - and both companies submitted proposals.
Ericsson won.
Motorola is crying foul.
The result, county officials say, is an onslaught of veiled threats and bad publicity they say is unjustified and counterproductive.
``They're fighting like two little kids, and we're caught up in it,'' said county communications director Dan Engler.
BID RELEASE REFUSED
County Judge John Garth said he was told to expect controversy when the county first decided to bid out the project. Nevertheless, he is still annoyed with the outcome.
``Motorola is using tactics I don't necessarily agree with,'' Garth said.
Motorola's letter asking for the details of why Ericsson was chosen over Motorola has the county worried, and Garth fears legal action. Motorola claims they were the lowest bidder, though the county won't release the bid amounts. The Judge said price was only one factor in choosing the vendor.
Compatibility and coverage issues played a major part in the decision process, and county consultants claim Motorola didn't have a good enough proposal on how to link the county's radios with Fort Hood, which operates an Ericsson system, and other area dispatch centers.

``Motorola left a lot of questions unanswered,'' Garth said.
But Garth said he fully is expecting a lawsuit to emerge from the ordeal.
``It's too early to speculate, but we don't make a habit out of suing potential customers,'' said Pat Sturmon, public relations manager for Motorola's radio division. ``We believe, however, we are the low bidder.''
So far Motorola has only sent a letter asking for documentation on the bid process, but the consultants who handle the project for the county said both bid packages contain sensitive information that would give competitors unfair advantage over one another.
Sturmon said Motorola bid $7.2 million. Ericsson won't release its bid amount. But of the $11 million expected costs, the county has broken out $8.5 million to go toward the radio equipment and construction of the system, which will be handled completely by Ericsson.
``Are they comparing Apples to Apples?'' Sturmon asked. ``We want to know how the decision was made. We're not looking for trade secrets or pricing secrets.''
But Ericsson sees it differently.
``Motorola has a torch-and-burn type of mentality: `If I can't convince you to buy my system, I'll create problems with your boss,''' said Joe Hayden, Dallas are director for Ericsson's radio division. In this case, the boss is the taxpayers, Hayden said.
RADIO WAR HEADACHES
Motorola was the first to implement 800 mhz trunking technology in the early 1980s but at the turn of the decade Ericsson, then affiliated with General Electric, launched its radio division. They set up their first system in Lincoln, Neb., in 1991 and since then the two companies have been going head to head for control of the private radio market.
More and more local governments - and sometimes whole states - are going over to the trunking system. The reason: the radio waves have grown too crowded and, since trunking allows an agency to transmit dozens of radio transmissions over the same channel, dispatch centers are embracing the system. Since the Federal Communications Commission has designated the lower 800 mhz frequencies to trunking, radio systems have migrated to those systems.
In numbers, Motorola is clearly in the lead with 30 radio systems operating in Texas, including neighboring Williamson County, and over 100 operating systems in the United States.
While Motorola has a several-year head start, Ericsson has sold 85 systems in the last six years, giving a Motorola a run for its money.
``Ericsson has been very aggressive since they came into the picture,'' said Joe Hanna, vice president of Association of Public-Safety Communications officials - International, or APCO. ``The competition has been fierce, and there is a fairly major fight in the industry between Ericsson and Motorola over industry standards.''
In the tradition of free enterprise, the customers have been the primary benefactors, experts say. Since the induction of Ericsson's first system, the quality of the systems has jumped to unprecedented levels, the technology has advanced at alarming rates and prices have been driven down.
``In the long run, the public safety community wins,'' said John Ramsey, APCO's executive director. ``You're talking about millions of dollars worth

of purchasing. If you've got two companies fiercely fighting for those contracts, the competition raises the quality of those systems.''
But in other ways the public safety community suffers from the unrelenting competition. Often when company loses out to the other, the decision is challenged, as in Bell County, resulting in public relations headaches for officials fending off the attacks from the jilted company and sleepless nights worrying about possible court battles with high-priced corporate attorneys.
Ramsey said not every bid gets challenged, but those that are can bring controversy. A lawsuit, however, is rare, he said.
GLITCHES IN THE AIRWAVES
Both Ericsson and Motorola point to the problems each other has with its systems in the United States, while emphasizing their own successes.
The truth of the matter, according to APCO, is that every 800 mhz system has problems when it is first set up.
``When you install a trunk system, you have to understand its complex technology,'' Hanna said. ``It takes a while to get out all of the glitches.''
Hanna runs an Ericsson-built 800 mhz system in Richardson, and the city police and fire departments had a lot of coverage problems when it was first set up. Like many new users, public safety officers complained of ``dead spots'' where no radio communication was possible.
``We took the approach that this system of ours was going to work,'' Hanna said. ``We were a little more patient than most working out the problems with Ericsson, and now we're completely satisfied with the system.''
The same approach is seen with Ericsson's first system in Lincoln, Neb. Lincoln Police Chief Tom Casady said the system had some severe problems with dead spots and distorted transmissions. But Lincoln, too, worked out its problems, and is now prepared to invest another $3 million into upgrading the system, Casady said.
Not all problems are peacefully resolved.
In Trenton, N.J., a Motorola system went malfunctioning for four years, and Trenton police officials said Motorola only agreed to fix it after unrelenting pressure from the police and fire departments.
The fire and police unions were calling for Motorola's head, saying the company would do nothing until a police officer or a firefighter got killed due to a radio malfunction. Lt. John Miloszar, Trenton's commanding communications officer, now says the system is functioning properly, and the city has fully committed to it.
``The coverage problems are sorted out,'' he said. ``Once Motorola agreed to help fix the system, they bent over backward to address the problems.''
A lot of the problems in systems stem from expectations, Hanna said.
``It's the nature of the beast,'' he said. ``Anytime you install a trunk system you have to allow for a certain amount of problems.''
Sometimes the problems are the company's fault, sometimes the system wasn't designed to be powerful enough, he said.
``Sometimes those disputes are resolved easily,'' Hanna said. ``Sometimes they're not resolved easily or not resolved at all.''
TROUBLE IN KANSAS CITY
The prime example of an unresolved dispute would fall squarely in Kansas

City, which has been engaged in a two-year battle with Ericsson over its $18 million radio system.
Matters have come to a political head in Kansas City, and outrage against Ericsson comes from all sectors. The system went on line in 1995 and since then the city has been plagued with dead spots in its radio coverage. A Kansas City police officer was shot in the leg by a suspected drug dealer in September 1996 and was unable to call for an ambulance because his radio had gone dead.
That officer, Robert Blehm, is suing Ericsson, and the city council is facing enormous pressure to file its own lawsuit against the company.
``The damn things don't work,'' Councilwoman Teresa Loar said of the radio equipment. ``Someone's going to get killed.''
Ericsson officials say Kansas City's problems stem from false expectations of a system Ericsson built entirely to Kansas City's specifications.
The city's original specifications called for clear radio communication in 95 percent of Kansas City's 323-square-mile city limits. When the city hired an independent consultant to see if Ericsson had met its obligations, he backed up the company's claim.
``They asked for 95 percent coverage, and they got 95 percent coverage,'' said Hayden said. ``That means there is a small 5 percent of the time you lose radio coverage.''
Kansas City officials rephrased their attacks on Ericsson, saying the company knowingly sold them a faulty system. The city has made its displeasure clear by refusing to pay the final $1.7 million it owes Ericsson.
Hayden said Ericsson wants to work with Kansas City in solving its radio problems, but until it's paid for the original work the company's hands are tied.
Meanwhile, the Kansas City City Council has been meeting in closed session to discuss a law suit.
NOT ANOTHER KANSAS CITY
So far, Bell County has only an address: 712 West Avenue O.
The Belton address is for an empty lot beside the county's road and bridge truck barn. Garth is waiting for the day that lot will contain a communications tower and an impenetrable communications bunker linked to every cop, firefighter and paramedic in the county through the magic of digital trunking technology.
Garth said the county has come a long way getting all of the local cities to sign on to the system, but even if the a contract is signed with Ericsson today the system still has a long way to go. Logistics have to be worked out, the dispatch center has to be designed and built and bonds to pay for the projects have to be issued.
But Garth is confident the county will have a working radio system by late next year.
He admitted the radio system will probably encounter problems, but he balked at the suggestion Bell County could become the next Kansas City.
``Anything that technical is going to have problems,'' Garth said. ``But we'll work them out.''
Like Kansas City, Bell County has requested 95 percent coverage of its jurisdiction, but Garth said that, unlike Kansas City, he and other

officials involved in the project fully understand what that entails.
At a meeting with public safety officials from all over the county, Garth explained that the system would probably not be capable of penetrating some of the more rural, underpopulated areas of the county but its penetration would be far better than that allowed by the numerous separate 150 mhz and 400 mhz systems currently operating.
Bell County also doesn't have the massive buildings and dips and valleys that characterize Kansas City's landscape, Ericsson officials said.
Spurred on by the problems in Kansas City, Hayden said Ericsson has instituted an education program for prospective customers, clarifying the capabilities of the system the company is building.
``Bell County knows exactly what the capabilities of the system are,'' Hayden said. ``There are not going to be any surprises.''
What County officials want now is to never hear the words ``Kansas City'' again.
``We need to look at the positives,'' said Engler, who came on board six months ago to head up the radio system. ``This is the wave of the future. Consolidation is what's being done. My concern is providing the county with the best radio system it can get.''

I'm looking for a scanner that covers most of everything there is or can be easily modified to do so. I'm new to the "hobby" but I've used several scanners over the years for fire police and weather monitoring. I remember we had a scanner that could pick up everthing even FM radio. We used it to monitor military aircraft on our airfield. I'm open to hand helds and mobile/base units no base onlys need apply. Price range is under $200 or close to. I know I can't afford the Farrari but I don't need a Yugo either. Also availability and advice /experience will be a help I'm not calling every RS with in 200 miles just for a close out special. If it breaks I want an off the shelf replacement like yesterday.
I know I'm dreaming and just another guy who wants the world for a dime but you have to try. THANKS MIKE

You might try Digi-Key, 701 Brooks Avenue, South, Thief River Falls, MN,
56701--677, 1-(800) 344-4539. They show a Microchip NM93CS66N for $3.15
in an 8-pin dip package. It is listed as a 4K serial EEPROM with
security.

287. Is the still the last word on Pro 2021 mod?

Newsgroup: rec.radio.scanner
Date: 1998-03-03 00:00:00 UTC
From: Buzz <nospam@my.house>
Message-ID: <34FCE6A1.1918@my.house>
Source record: 168459

I found this on the net after I modified my pro 2021 and it didnt work. I was wondering if a fix for the mod is out yet?

Thanks,
Buzz

repost---->

overview: the pro2021 is a 200 channel scanner, mode is implied by frequency, missing the 220 ham band, 800+ cell fone/ISM band, the 170ish thru 380ish military? air band...
sold for about $200 from radio shack, first on special in 1986 time frame.
bands which the cpu will honor may be excluded by the presence of diodes near C151 (on silkscreen) top view, left end, rear.
in order from left starting with D44:
D44 - 'U2' - 810-960 MHz Mode: FM Step: 12.5 kHz (installed - cell fone)
D?? - 'U1' - 380-512 MHz Mode: FM Step: 12.5 kHz
D?? - 'Hi' - 138-174 MHz Mode: FM Step: 5.0 kHz
D?? - 'Ar' - 108-136 MHz Mode: AM Step: 25.0 kHz
D45 - 'Mi' - 68- 88 MHz Mode: FM Step: 5.0 kHz (installed - TV ch2-4)
D?? - 'Lo' - 30- 54 MHz Mode: FM Step: 5.0 kHz
After clipping D-44 the scanner will scan 810-960 MHz but will NOT recieve.
Same for D-45

further: when the cpu selects a frequency, IC8 (a shift register) is used to enable the rf front end for that band. IC8 is near center, about 1.5 inches from front, thru-hole mounted on top. the outputs of ic8 associated with D44 and D45 are not connected to anything.
R112 leads from pin 4 of ic8 to base of q10, and when the output at pin 4 is active (low) enables VHF LO band reception.
Pin 5 of ic8 is active for "Mi" or "VHF-Mid" band recption.
another (10K) resistor may be connected from pin 5 to the rf-enable end of r112. this will enable the lo/rf for 68-88.
this mod is incomplete, and any "scanner men" are invited to enter this discussion.

Pin 13 is associated with the 810-960 MHz band, and similar modification
of adding a 10K resistor from pin 13 to the rf end of r113 should enable that rf front end.

note: search mode does not function with either of these mods, so
i'm probably missing something, but direct (manual) frequency entry
of the 2nd harmonic of the 440 MHz ham band coupled with the use of
a 440 HT who's 2nd harmonic is about 50 - 100 dB below carrier
result
in a full quieting signal at 5 watts at a distance of about 2 feet.

so: have we stimulated anyone who knows stuff about modifying scanners
to join in and help us 2021 owners out? If so, that would be
great.

btw: cycle the power after clipping diodes, the cpu seems to sample
the diode array at power up only. Reset is not necessary.

Note: I haven't tried or verified this, proceed at your own risk.

288. Re: Globalstar vs. Iridium CDMA vs. TDMA which is the superior system?

Iridium launched their first 5 satellites on May 5, 1997. Their
tenth
launch took place on February 18, 1998. There are currently 49
operational
Iridium satellites in orbit.

> Iridium's page says they're going online this year. That seems more than a

>

True.

> The Iridum satellites will be in a much higher orbit than Globalstar,
> leading to greater communication delay.

The Iridium satellites orbit at an altitude of about 780 km. The
Globalstar orbits are a little over 1400 km. in altitude.

> $275.

I walked into Rat Shack yesterday...I asked about the trunktracker, said
that
$299 was just too darn much to spend to listen to the Fremont Fire
Department,
but I might consider it when it's on special.

I believe the salesman said, after consulting their computer, that it
would
go on special in October. Perhaps by then, the current state of trunked
systems will settle down a bit. The salesman said that Fremont Police
went
on a trunked system for a little while, then went right back to a
standard
system.

Anyway, the entire 20 channel Alameda Co. trunk system is kind of
interesting
to browse...

Overheard three days ago on FPD 483.0375...
"Could you please log me off? I've just crashed and lost 6 1/2 pages of
report." (in an annoyed, frustrated tone)

These policemen have enough to deal with...crazy computerized radios and
crashy laptops don't seem to help much yet.

Why was I at Radio Shack? All of the other places in the Bay Area were
out of _PUSHBUTTON SWITCHES_. Fry's...JDR...all out!

These are radios (Uniden=BC235, BC895) and Radio Shack (PRO90 and
PRO2050) that allow you to follow trunked conversations that use
Motorola protocols.
Which brings me to Doug's statement- before you ask about one of the
trunk tracking scanners, you must realize that the current crop of them
work ONLY on Motorola type systems. If your local PD/city services are
going GE, you'll have to wait for the oft-rumored Bearcats that will
handle this system; they aren't available yet.

>Yep, I am looking for these machines. ANyone have one to part with?

Greg, we have a trade in R100, unblocked, works fine, physical condition maybe a 7, with mounting bracket. You can have it for $500. Current dealer cost is $720.

Haven't seen a Shinwa in years. They were only manufactured for a short while, I believe.

Plenty of R7100s around, but an R7000 might be a better investment.

Email if interested. Can ship today on a credit card.

Regards ..... Steve

I would go with the BC 895 (aside from the trunking feature) because it is very sensitive, has built-in CTCSS (it's an add-on for the 9000) and it has computer programmability.

Looking for the following specific units, or what have you:

Panasonic RF-9000 large table top shortwave radio

Phillips AE-3905 copmact portable digital shortwave receiver

Sony WA-8000 or 8800 portable shortwave w/built-in cassette

Sony SW-100s

Sony SW-1s; even without the accessory kit, which I already have.

Shinwa SR-001 mobile scanning receiver w/remote control

Kenwood RZ-1 mobile scanning receiver

ESKA - Any of their hand held or portable scanning receivers

Please e-mail with description. condition, and price of your item.
If you are in the UK, I have friends that can pick up the item on my
behalf. I'm located in California.

From your detailed description, the problem appears
to be rather complex and pervasive. Your best bet
is to take it into Radio Shack for service. It
cannot be remotely diagnosed and repaired by proxy,
that's for sure.

Excuse me? I know you are woman enough to make
a proposal like that, but my wife would object
and scratch your eyes out and feed 'em to you.

But somehow, I just can't see you as a pure female.

Transvestite or hermaphrodite, maybe......
but <shudder> I have no use for those critters.

> I KNOW YOU REQUEST A COUPLE OF DOLLARS FOR YOUR STINKING
> COPYING FEES FOR THE PAPER THE TEST WAS ON. YOU CAN DENY IT.

You're lying like a rug, Tylerena.

> YOU'RE STILL A FUCKING ASSHOLE. LIAR HAS BEEN ADDED TO
> THE LIST OF ADJECTIVES.

Oh, really now? Do tell? Is this another perverted
sexual proposition? You are very, very sick, Tylerena.
Shame on you! You ought to go hang your head in
utter self-pity for unloading like that. Shame!!!!

> >For one thing, we don't charge money for beta participation.

> BULLSHIT!

Nooooo. That's truth, sonny.

> >Secondly, we have no record of you whatsoever.

> I'm sure you don't.

Sooooo, why don't you POST the identity under which
you claim to have ordered, so we can look it up.
If we received anything, it will be on record. My
receiving department keeps different records - -
separate from the shipping department...so if we
received anything from you, we'll be able to tell.

And then we can tell if we shipped anything out.
As it is, there is no record of receipt or shipment
to the identity that you use here on the newsgroups.

Believe me, I don't want YOUR money. If you sent
some, and if we happen to be sitting on it, I'll
make damn sure to return it WITH interest.

> >Thirdly, beta participation is usually totally
> >free, except that when hard copy is necessary,
> >we'll sometimes ask for a SASE and a stamp.

> Yea you fucking bastard! Where the hell are my stamps too?

My my..... well, like I said, we have no record of you
and the way you have treated me for the last couple of
years here on the newsgroup, it's mighty unlikely you
ever even tried to deal with me. THAT would be kind of
two-faced, now wouldn't it?

But *if* you did send us anything, then post the identity
you used, so I can look it up. Once again, I don't want
anything from you, laddie.

> I VOW TO SPREAD THE TRUTH ABOUT YOUR LYING ASSHOLE WAYS
> TO EVERY SCANNER I KNOW!

Oh my. Are you aware of libel and slander laws?
Probably not since YOU also publicly confessed to
listening to your local cellular system and even mapping
it out. You should get to be more familiar with the
laws, though.

But, the *truth* is we have no record of you.
If you used another identity, then spit it out and I
will check into it.

The thing is, we do not charge money for beta test
project instructions, paper or otherwise. If you
sent money, it was your own stupidity, then.

You ought to know enough to not send MONEY in the
mail. And if you sent a check or M.O., then you have
the means to trace it and *prove* your claim.

So prove it. Tylerena.....

> I REALLY DON'T CARE IF YOU CHEEK LOVERS DON'T BELIEVE ME.
> I KNOW I SENT MONEY TO THIS IDIOT AND HAVEN'T SEEN A DAMN THING.

HA ha ha ha ha..... you are getting to be very
funny, Tylerena. And sick, too, making sexual
overtures to me here on the public newsgroups, no less.
You are very, very sick.....and pitiful, too. I
almost feel guilty for laughing at you.

Nevertheless, if we have your money, and I can't
imagine how that is possible, just disclose your
identity, WHAT you sent and WHEN, and I'll make
sure you get it back.

That's the best I can offer, Tylerena, although I
will strongly urge you to get some "help" with your
identity crisis and find out whether you are a man
or a woman or an accident of Nature in-betwixt.

Modern medicine can help with "accidents" sometimes,
and modern psychology can help with identity crises.
You should seek help.

Perhaps even a minister, eh?

Hey Bill,

why don't you save yourself some money and stop making long distance phone calls to various IBM.NET POPs across the country? It must be pretty expensive to call MN and WA from NC everyday! As a matter of face, why don't you just cancel you IBM.NET account and continue to use the PC at the EPA 134.67.118.48 (rt-ecao-host36.rtpecao.epa.gov)?

I think it's pretty abvious that everyone know who you are now!

Jason

PRO-64 is *not* a trunk tracker.

I think there's a blurb in its description that it scans so fast
("hyperscan") that it's good for trunked systems. That's probably why one
salesman thought it was a TT. But it's not.

$149 sounds like a great deal. Unless you need trunk tracking.

326. Blocking cordless freqs

Newsgroup: rec.radio.scanner
Date: 1998-03-03 00:00:00 UTC
From: randycz@aol.com
Message-ID: <19980303170201.MAA22603@ladder03.news.aol.com>
Source record: 168521

I have a 12 year old son very interested in monitoring. I have an old Radio Shack PRO-34 20 channel scanner I was going to give to him. I am not too crazy about the idea of his listening in on cordless phone calls. (Sometimes kids are not very discreet.) Is there a mod or a filter available to block the 40-50 Mhz range?

Thanks in advance.

Randy

So what are you on now Petey. So far you have admitted to and I quote

"PROZAC: one year, stopped because of intolerable wired, buzzy,
can't-lie-still
insomnia. Sex was functional.

ZOLOFT: Two months. Stopped because of same type of insomnia. Sex was
totally dysfunctional.

SERZONE: One day after stopping Zoloft I started Serzone

Started on Luvox about 3 weeks ago, and I think I may have found the
one!
As effective as prozac for me, without the dreaded insomnia."

So which drug is it this week or are you back to pretending it is all
make believe. BAWAHAHAHAHA.

BTW, seems you are lying again. You didn't use your x-archive last
message Petey, not very consistent with what you say. OTOH, all the
years of drugs do seem to be taking a toll on you.

Now, do you want to talk scanners or keep playing this game Petey? Oh
wait, you don't have a clue about scanners, never mind.

Respond now Petey!!!

BAWAHAHAHAHA!

Geezus.....I was "exposed" AFTER I made it clear,
you dingbat. It's there in the record. There
should never have been any confusion in the
first place since all the references were to MY
web site, MY FTP site, and MY e-mail accounts.

There couldn't have possibly been any deception.
And there was nothing to "expose" until wingnuts
like you couldn't tell the difference. So I
posted about it. Then Mackey and Boe rose to
the call to post it even more, albeit warped
out of shape. Look what those two popinjays
did when they thought I was on AOL. Ha ha ha ha

Consider the sources of the "exposure", wingnut.

> Guess that's where you learned this neat trick,
> eh Bill? Don't lie about it now....

I don't lie, dipstick....except maybe in your craw.

> Who gives a fuck? You use your own resources to

In regards to other cordless freques, the earliest cordless phones used am.
They operated just below the am broadcast band (U.S.A.).
I don't know if any of these antiques are still arround, but you could
listen to them with the old am radios bytuning just below the last station
on the dial.

Hi,

Even if the Trunk Tracker scanner is thwarted by this change in the data stream (highly unlikely - see Greg Knox's reply to this post), software such as TrunkTrac (also developed by Greg) could be easily modified to receive the new data format.

But why would Motorola do this? To tick off thousands of Law Enforcement and Emergency Services professionals and volunteers that rely on the Trunk Tracker as the only practical and cost effective way to monitor surrounding public safety agencies in case of emergencies or for mutual aid? I believe it is not in Motorola's best interest to do this.

Fore example, the Trunk Tracker was invaluable to public safety and the news media during the recent severe weather in Central Florida!

351. trunktracking and changes to the data stream (?)

Newsgroup: rec.radio.scanner
Date: 1998-03-03 00:00:00 UTC
From: smith145@hotmail.com
Message-ID: <6dfqd2$1636$1@news.gate.net>
Source record: 168611

i have been told by a very reputable source that there is a firmware revision out to motorola(tm) smartnet(tm) trunking systems that changes the OSW (outbound signalling word) data format.

this has been done purposefully to "fool" the trunk-tracker scanners. "real" radios will ignore the extra bits in the data stream, but i understand that this severely hinders the trunktrackers ability to monitor a system...

i am not aware of how effective this method is, but was wondering if anyone else had heard similar rumblings...

post to the group, not me.

I'm new on trunking myself, so I am no expert, but (I think) you can
track your Albany PD or Fire Dept. 2 ways.....
1) hit trunk and then wait until the ID that you want to hear comes up
and then hit hold and your trunk will track only that ID that you want
to trunk
2)punch in the ID that you want to track into your trunktracker while
in the trunkmode (I haven't done that yet, just read about it....)On

Where can I get some kind of info on the signals, codes, and 10 codes?
Are they all different? If they are, Are there any tricks that anybody
knows to breaking them other than common sense?????

sure would be interesting to see how many suits have been files against Moto compared to E/GE....i can honestly think of only 1 suit against Mot, and that was from a deputy in Texas' wife. the deputy was killed and she sued because apparently the emergency button on his STX radio did not transmit his emergency call....dunno who won, though.

sorry guys, EDACS sucks. *but* a poor, under-funded Moto system is just as bad. some of these decisions are made by county/city admin types, who do not understand anything about radio, yet are quick with the pen to nix a couple of extra sites from a system to save a million or two....

i can think of three counties in florida that are really regretting their decision to purchase their system from E/GE...especially now that they will miss out on APCO 25..just ask Volusia/Brevard/Indian River counties(!)

Also, guess which plant just laid off 250 people? Can you say Lynchburg, VA...home of the bung-hole EGE(??)

@cts.com
Organization: COMMtronics Engineering / World Scanner Report
Newsgroups: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.policy

After considerable research of my own I have
to conclude that Bill Ewald, KD4EUW, of the
EPA in Research Triangle Park, NC, is the
infamous "iwstirn@bigfoot.com".

The sick thing is that a Deja News search
on "iwstirn@bigfoot.com" discloses over 1400
posts by this guy over a short period of time.

He certainly gets around, this Ewald does.....
and using our dollars, no less, since fairly
conclusive evidence shows that he posts from:
134.67.118.48 (rt-ecao-host36.rtpecao.epa.gov)

Issues of this revelation, first brought to
light by "someone@somewhere.com" are:

1. Ewald uses US Government resources to conduct
private vendettas and to involve himself in
amateur politics.

2. Ewald wastes taxpayer's money playing on the
newsgroups when he should have been doing
his job.

3. I evicted Bill Ewald from the FidoNet SCANRADIO
forum a couple of years ago for much the same
reasons as I evicted John Mackey....off-topic posting
and excessively annoying and unruly behavior.

#3 is mentioned as a probable motive for his behavior
on certain newsgroups.

It has been previously posted that one place to
issue a complaint about Ewald's conduct is:

internet_support@unixmail.rtpnc.epa.gov

My subsequent research suggests another point
of contact as well:

ckg@gissv1.rtpnc.epa.gov

They could well be the same, but what the heck.

Also as pointed out by others, this "iwstirn@bigfoot.com"
appears to be responsible for the *forged* cancellations
of *many* posts from the scanner newsgroups.

The plot thickens, but it appears we're getting to
the bottom of it.

Anyone interested in doing independent research can
go to http://www.dejanews.com/home_ps.shtml and do
a power search on "*" in the SEARCH FOR box, and
"iwstirn@bigfoot.com" under the author field. A micro-
view of the results are included below.

>>his posts indicates that you're as sick as you think he is.
>
>What's ironic is that you don;t follow your own advice. You readily respond to
>off topic posts. Why should Glenn be any different?

But the difference is that *I'm* not the one whining about Mackey's
posts. I can read them, skip them, or whatever. I don't really care
if he posts 300 messages a _day_. All I'm doing is pointing out that
all the whiners (and there are a LOT of them in my killfile) are
enabling him, and are every bit as much to blame as he is for
cluttering up this ng with a lot of crap.

>When someone posts hundreds of messages within a month or so, aren't you
>curious to know what they are about? Since it's no big deal to find out how

Not particularly. But I can easily determine that by just reading the
posts as they come up. There's no need to obsess about it by keeping
a detailed count, or searching Deja News for stats to throw around to
support some agenda or other.

>many posts a person makes, you can hardly call it a sickness (not unless you
>happen to be grinding your ax and out to make a point, no matter how weak it
>is, which is what you seem intent on doing).

My point only requires a bit of observation and logic. It's the
whiners who are exhibiting their obsession and grinding axes, not me.

>Hey, that lame-brain Strin has posted close to 200 messages since the beginning
>of the year, with only a few on- topics. Check his postings in other NGs, and you'll see
that he uses the same MO there as he does here.

Who cares, really? I've seen his posts here, and can observe his
rather obvious agenda. I have no interest in what he's doing in some
other newsgroup. I don't really have much interest in what he's doing
in THIS newsgroup, even. I only scan his stuff to see if it's time
yet to add him to my killfile. As soon as he stops entertaining me,
in he goes.

>You're right, of course. If everyone did post on topic, Mackey and his ilk
>would go away. They never have anything to say about scanners.

And that's the crux of this whole matter. Everything else is just
window dressing by folks who are looking for attention.

BTW, I see that Hansen has posted a lame response to my comments as
well. Too bad for him that I'm not biting on his bait. I've made my
point.

From: docalarm@aol.com
Message-ID: <19980303062700.BAA05557@ladder03.news.aol.com>
Source record: 168627

UHF Model RF 455U Rated for continuous use. Physical size: 19" rack mountable 19 x 10 heatsink. Originally purchased for repeater but was never installed.

I have no documentation on the amp. I bought 2 of them at a ham radio flea market in Palo Alto CA. I currently am using one being fed by a Motorola MHW 710 power module with an output of approximately 7 to 8 watts. I am getting approximately 45 watts out of the RF gain amplifer same model as for sale. It has n-connectors for input and ouput. The 2 power transistors used in the amplifer, one is a Motorola MRF641 the other is MRF646 which is rated at 45 watts. The Motorola Data manual specs the transistor at 45 watts at 440 to 520 mhz. I have requested info from the manufacturer who is still in business but have not received the info as of yet. The manufacturer did state these were a special production. The manufacturer is RF Gain.

368. FS - Model C-950 Interconnect

Newsgroup: rec.radio.scanner
Date: 1998-03-03 00:00:00 UTC
From: docalarm@aol.com
Message-ID: <19980303063400.BAA06322@ladder03.news.aol.com>
Source record: 168628

Includes Manual $50 plus shipping and COD charges

Quoting from the manual:

"You know own the most technically advanced feature packed and capable simplex interconnect product available. Years of trouble free, high quality mobile telephone service are now yours.

Your CS 950 can service you in a variety of ways. From the mobile you an initiate and receive telephone calls fully automatically. But also, your calls can be initiated and received in your office by a dispatcher. The dispatcher can then manually connect your mobile unitl with your call.

Our digitally processed "FAST VOX" and simplex loop yield a degree of communications quality found in no other simplex interconnect. You merely take turns talking. Our digital processor will allow you to talk at your normal pace. No prompt tones are required to let you know when it is ok to talk.

The three digit access code will prevent unauthorized persons from making calls. But more important, the sophisticated dial restrict logic will keep the "authorized" users from making unauthorized long distance calls.

The CS 950 is capable of superb half duplex operation."

If the revision includes a change to the software of the mobile and handheld units then anything is possible, and obviously the Trunktrackers could be easily thwarted. But this is highly unlikely. Few organizations would be willing to sit still for that aggravation.

If they are going to just tack some superfluous bits on to the data stream then the Trunktrackers will just ignore them and won't be fooled. Basically, any change made to the data stream that doesn't confuse a current Motorola trunked radio won't confound the Trunktrackers.

What you may be referring to is a problem some TT users have reported regarding chopping out of certain talkgroups. The problem seems to be caused by noise in the subaudible range of the audio spectrum on the voice channels. The radio thinks it's seeing the disconnect sequence and jumps back to the control channel, finds the conversation still in progress and returns to the voice channel where the process is repeated. There are probably a number of things that could cause this noise or distortion. The problem with it is that some of the actual subscriber units seem to have been confused too so it's not likely a viable technique. Besides, Uniden has a fix for it that will be incorporated in future versions which causes the Trunktrackers to be oblivious to the distortion.

Go to http://support.tandy.com/support_electronics/2849.htm and then you have a listing of most of the RS scanners. Going a bit further, you will find a detailed parts listing for the Pro-43. You are looking for the KEYTOP part number. You are actually looking for the NP Part # which is KC0385. Call 1-800-THE-SHACK or the number at the top of the detailed part listing page. They will have it sent to you in a couple of days. Fairly easy to install. Disassembly instructions of the Pro-43 can be readily found on the internet. Last time I ordered this part # it was $5.91, but who knows what the price has done.

375. Globalstar vs. Iridium CDMA vs. TDMA which is the superior system?

Newsgroup: rec.radio.scanner
Date: 1998-03-03 00:00:00 UTC
From: Abort_Retry_Fail <Abort_Retry_Fail@roadrunner.net>
Message-ID: <34FC591D.1C08@roadrunner.net>
Source record: 168635

If you're interested in satellite-based wireless communications,
you should see the Globalstar system Iridium is intended to compete against:

The Iridium web site says that they'll be launching their first birds later
this year. Globalstar's first birds went up two weeks ago. (Qualcomm is a major
partner in the GlobalStar consortium, as well as being a major developer in
the project.)

Iridium's page says they're going online this year. That seems more than a
bit ambitious if they don't even have any satellites up yet.

Iridium using TDMA. The Gobalstar system is CDMA.

The Iridum satellites will be in a much higher orbit than Globalstar,
leading to greater communication delay.

I think both systems are technically feasible; they can both be made to
work. Whether either or both are *commercially* feasible definitely remains
to be seen!

376. LTR group problem

Newsgroup: rec.radio.scanner
Date: 1998-03-03 00:00:00 UTC
From: blue@nym.lycaeum.org
Message-ID: <6dgdakjoi1@sparky.wolfe.net>
Source record: 168636

One and only one freq. is known;854.5875. This the HOME freq. for 10 radios on a LTR system. For over 2 months now, none of my friends or me can find the other freqs. these radios go to when 854.5875 is not available. We mostly try to direct scan down from 854.5875, but the tranmissions are so short we have had no luck. Also, a whole lot of others share 854.5875 and no doubt the unknown freqs.

Since LTR uses sub audible tones, what modification(s) are available for a PRO-34 or PRO-51 to i.d. the tone for these radios? Is there a company that would make mods.?

I almost bought a trunktracker until one of my group said they only work on Motorola systems.

Thanks,

Blue

377. Orange County, CA OC Fire Authority 800Mhz. Trunked Radio System

Newsgroup: rec.radio.scanner
Date: 1998-03-03 00:00:00 UTC
From: Jack Farley <"Jack Farley"@roadrunner.net>
Message-ID: <34FC68A1.3DCD@roadrunner.net>
Source record: 168637
Cross-posted to: rec.radio.scanner,

The Orange County Fire Authority (OCFA) has the callsign of wqz938,
with freq's in the 856-860Mhz. range.

Go to the PerCon frequency database page,
http://www.perconcorp.com/db_srch.htm
then print the frequency list.

OCFA trunked radio codes can be found at Trunktracker.com
http://www.trunktracker.com/states/ca.html#Orange
+
+
Orange County's new 800MHz. System is a Motorola type II digitial
trunked system. Astro Sabers and STX-3000's will be the portables and
Astro Spectas will be the mobiles. The system is very 'cellular' in design
and no radio will need more that 7 watts RF output to make it.

Most systems will be digital and render scanners useless - even trunktrackers.
All city police and fire and county agencies will also be on this system.

Information about the Astro Spectras is located at:
http://www.mot.com/LMPS/RNSG/mobiles/astspc1.htm

I like my SC-150 scanner; the main advantage in my opinion is that
it will run a full 12 hours on a single battery charge. That's
a pretty long time compared to most handheld units.

In this case, having less RF electronics can be an advantage.
Now that I know which frequencies I want to listen to, birdies
aren't an issue at all.
I do my frequency searching on a different model.

You need to make up your mind Tyler.....
First he's screwed you out of dollars...now then it's stamps, and now
you say it's the lack of beta test literature that is your big
problem.
As one who has done a lot of beta testing for manufacturers, I can say
they usually look for someone who has a clue as to what they're doing
before they ask them to beta test it.

It has become obvious that you are a liar, (who astonishingly fessed up), and someone only interested in causing Mr Cheek trouble.
I don't see where you are worthy of his beta test material....you'd probably screw up your scanner and then get on here blaming Bill for breaking it.

I didn't make it up. You said it. And yes,
it's illegal. Check the ECPA of 1986.

I run a business, Tyler. *All* mail is for me.
I don't open any of it. If the contents are
business-related, then they go to a department
that takes care of the proper bookwork. Only
purely personal mail comes straight to me.

And even I make a record of all mail to me.
You are not in my records nor in the business
records.

I'm really interested in the usual bands I guess exotic to me is
unblocked cell I don't need mil air anymore or FM radio I have perfectly
good stereo. I was just interested in something around 50 to 100
channels with 800 mhz that could be modified. Ok so what about the pro
26 if it breaks and they can't fix it am I screwed or will they give me

something of equal value. I'm just looking for some suggestions. The most reliable easy to use dependable available scanner for under a couple of bills

Yup, me too. I was CO-038 of the RCMA. Nice
group before they went snooty and uppity. We
had a small fun group in the high country of
Colorado....and even tipped a few Molsons and
other fruits of the grains, vines, and trees.

> Session). Those were great days. I made a lot of friends through this
> hobby.

Yeah, and there were a lot of professional people
in those days....doctors, architects, engineers,
lawyers, CPA's, as well as the trades and such.
It was a common arena in which all were kind of
equals. But something happened..... many of the
decent people bailed out or went under wraps.

Someone birthed and reared a few placentas and
called them "John", "Tyler", "Petey", "Hankie",
and such..... No offense to these guys
as they probably can't help it, but someone
should have horsewhipped their parents, and
maybe even took 'em out and drowned 'em.

> Somehow I think computers helped to ruin this hobby. No one seems to
> want to take the time for a good old fashioned eyeball meeting anymore.

I think there is a little bit of that still going
on, but it is a lot less, that's for sure. I don't
know if that makes the difference, but the thing I

see is a whole new breed of people who have no regard
or respect for anything or anyone.

Seems their entire mission in life is to destroy,
degrade, denigrate, and dump all over everything.
Take the above mentioned four "offenders", for
instance.....okay, let's say they're on the money
and that I am "evil personified" and that they are
out to do the hobby a favor by doing me in.

Cool. That's fair if they truly believe in their mission.

But......who and what they are AGAINST is one thing.
The pregnant question is... who and what they are FOR?
You can't tell. 100% of their posts are vile,
nasty, and derogatory. They don't support anything,
especially scanners and scanning. Not a one of the
four has ever posted anything pertinent, useful, or
even supportive of scanners and scanning, with possible
exception of Tyler who used to shoot off his mouth
about how he tracked and mapped out his local cellular
system.

Okay....that's on topic....well meant, if not kind of
ignorant. But Boe, Mackey, and Hampton, not to mention
that IWSTIRN dude.....absolute zeroes in terms of being
FOR something. Clearly they're for themselves and
any honor they hope to achieve by doing me in. Psssst,
I hate to clue those snakes, but you don't just take
over someone else's wave. You catch your own and ride
it all the way in.

And they wonder why I call 'em low-lifes and sleaze.

Hah! They earned their mo nickers......

But anyway.... you've been around....and if you stick
very long, they'll come after you, too....or their
proteges... I'm pretty well convinced that a bad seed
got planted in the radio hobby some time ago and that
it has sprouted into a stout, pervasive fungus now.

I hope I'm wrong.

Yesterday I was looking through my Pro-26 Service Manual and noticed that there are 5 IC's on the Logic Board, numbered 501 through 505. I know the IC-505 is the main CPU since it has 100 pins and comes in different versions for the US and the UK. What do the other IC's do and which one holds the scanner's memory? Is there a mod to increase the scanner's memory capacity? Thank You for any information.

In all the years I've been listening to scanners and police communications, which dates back before MDT's and Laptops in the cars, I constantly hear them calling in saying they need to be logged off and back on again because the system is down or not working properly. This also goes for warrant and license checks. Alot of times they try their terminals and also call it in to make sure it is right.

Source record: 168275

TT freqs: 855.4625, 855.7125, 857.2125, 859.2625

Talk Groups (and what I think they represent):

1648 Combined PD dispatch (HEPD units: 6000's, SPD: 9000's)
1680 PD Channel 2 (heard only HEPD)
48 FD dispatch
80 FD
112 FD
1712 (heard activity, but not enough to ID it)
1744 (heard activity, but not enough to ID it)
1776 Covert-ch5 (heard SPD surveilance)
3248 PW
3280 PW
3632 PW

Additional talk groups that I picked up one day, seemed like a test
because
they walked through every talk group one at a time (including the
above).
144, 176, 208, 240, 1808, 1840, 1872, 1936, 4816, 4976, 64176, 64720

Misc points:
I presume there are Admin and ISPERN channels, but I can't ID them.

[Posted for Steve Mansfield. Please don't email me about this! -- Jon]

Some radio enthusiasts are reacting to an incorrect message posted on some internet news groups regarding HR 2369, the Wireless Privacy Enhancement Act of 1998.

This bill WAS amended as promised by the House Telecommunications Subcommittee, and also approved by the full Commerce Committee. The version that was approved and that will go to the floor of the House is the version worked on by ARRL, scanner groups, the volunteer fire association and others. Mr. Tauzin and the committee staff were very helpful and accomodating to our concerns. Indeed, they allowed us to review and comment on the bill language before both subcommittee and full committee markups, as well as to let us review the accompanying report language.

The version of the bill appearing on the THOMAS web site is the OLD version of the bill, before it was marked up. The new, amended bill will not appear on THOMAS until the full committee report is published in the next few weeks.

This amended bill and the accompanying report go to great lengths to protect legitimate recreational radio users including amateurs, scanner enthusiasts and SWLers. The new language does NOT include the old CMRS proscription.

Please, please call ARRL, the House Commerce Committee or some other reliable source of information before reacting to postings about this issue on internet newsgroups.

Well, here it is for the world to see. The Great Mackey's contribution to this newsgroup is to say, "trunk tracking." Gosh, this is so profound, that I think I will slaughter a lamb and celebrate. The relevation is astounding and certainly worth of special observance.

Right! Then satellite TV (DSS) won't be able to compete with terrestrial
systems either? HA HA

I don't know which mod you tried for the 2021, but if it was for the 800MHz band you probably won't ever get it to work since the 2021 has no receive circuits for that band range. The CPU might enter and scan freqs for that band, but no simple mod fix will make it work right...

Hello:

I agreed. Officers that die in the line of duty should be memorialized. As with military personnel.... We should memorialize officers not necessarily because of what they were doing when they died, but because of their contributions and actions when the rest of society was sitting in front of the television watching "Married with Children" (no slam on this program intended).

Being an officer, I hear this often.... "You guys get paid to sit on your $%%". The dollars are modest anyway, but officers are paid for what they might have to do as opposed to what they do....

Kindly,
Don

I use a conventional scanner to monitor a trunked system with 40 talk groups and 6 to 8 output frequencies.
It's not much of a problem for me to monitor the police with my Pro 51.
I advise you to try to monitor the new 800 system with the scanner you already have first , unless
you live in a large city.

If your TT is experiencing the problem outlined above try this keypad trick,
it works !!:

Hold the SVC, #2 & #9 keys down simultaneously while turning the unit on.
This puts the radio in a diagnostic mode. While the characters in the
window are blinking, hit the #5 key, then enter the key that has your
trunked system programed. Now scan your trunked system normally. If this
doesn't totally eliminate the dropping out then start over but instead of
the #5 key try #6 and so on, progress upward until you acheive the desired
operation.

One word of caution though. Doing this will erase all frequencies programed
into banks 6, 7 and 8. But it may be worth it if your system is rigged to
screw with TrunkTrackers.

If you're interested in listening to these people the TT is worth
every cent. Buy the Uniden version, not the Rat-Shack...save yourself a few
$$, the Rat Shack model is made by Uniden.

Hello..

I have a SC-150B. Sorry to those who dislike this unit, I have enjoyed it completely! I have one problem though. I am trying to tap into the discriminator output but don't even know where to start! Has anyone done this or knows where documentation is available? Info is much appreciated!

-Todd

This is a BC model 855 XLT Uniden/Bearcat scanner.
Has been modified to receive all the Cell phone freq.
800mhz. complete coverage.The new scanners out there
will not get these Cell phone conversations. See why
"They" do not want us to listen in.
Like new still in box,manual,ant. and ac. adapter.
30-956mhz. coverage.

Let's see, according to WhoWhere? <http://www.whowhere.com>, you've used
no less than sixteen obviously fictitious Internet addresses. These are
just the ones where you were stupid enough to use your callsign. You
might
plausibly claim one or two were used by someone impersonating you, but
you can't claim all of them Toilet Boy.

In light of the abuse you've managed with fraudulent address, your
ragging
on Bill Cheek about the WinRadio issue in the manner you have been,
makes
YOU the hypocrite here, as usual.

AOR Ar-8000 would work, but if it is the 200 and 300 mHz stuff you
are really interested in a used PRO-43 will do just fine.

Message-ID: <34FE3F06.1A93514A@zebra.net>
Source record: 168321

The SC-150 is a very good radio, for what you pay for it. I've had mine for about 3 years. It's been submerged in water and dropped from a moving car, but it keeps on ticking. One suggestion, get a better antenna, the duckie that comes with it, couldn't pick up a gigawatt transmitter two feet away from it.

From: Michael Moore <m.moore@utoronto.ca>
Message-ID: <34FDE997.412BC5F7@utoronto.ca>
Source record: 168322

There is lots to pick up on the cell band -- regular folk with all
their "private" conversations. There is nothing like it on the other
bands. If that is your main interest, then the cheapest 800 Mhz scanner
that is cell unblocked will fit the bill. The PRO-26 comes to mind. I
think Durham Radio is selling them cell unblocked.

PS. Don't forget about those frequencies for cordless phones.
Listening to these frequencies will give you conversation like those on
cells, but the callers may actually be your neighbors.

Larry Baker wrote:

All,

Someone is posting inaccurate information regarding H.R.2369. While I believe the posting was an honest error, I do feel it's necessary to offer a correction.
The version of H.R. 2369 located on the Thomas server - as alluded to in the inaccurate posting - is the original, and not the amended version that is to be voted on this week. I have confirmed this by contacting the Thomas web site staff. If you go to the commerce committee site and download the Acrobat version you will see the amended text.
I won't go into the details of the bill here. If you are not familiar with it check out the Popular Communications magazine web site at http://www.popcomm.com and read the synopsis there.
H.R. 2369 is not problem free, and despite our best arguments, we have not gotten all the changes we wished for. Specifically, H.R. 2369 may have unintended effects on the public's ability to monitor certain shortwave utility communications transmitted on frequencies below 30 MHz.
While the Chapter 119 exemptions protect 99 percent of what scanner listeners monitor above 30 MHz from this provision, they may not be broad enough to cover all categories of shortwave utility communications. Allowing H.R. 2369 to prohibit interception of these shortwave utility communications could cause virtually all current shortwave radios on the market to become illegal.
We still need to defeat this bill, and I would encourage you to familiarize yourself with it and CALL or FAX your local Congressman TODAY and urge him to vote against it. However, the amended version to be voted on is not the danger to scanning that the original bill was, and Tauzin has not double-crossed us.

John Ward

Yes? You don't like shipping and receiving departments?
Come by sometime, and I'll give you the 50-cent tour.

> You know... why don't you just admit you took my money and be done with it?

How much money?

> Why must you boldface lie to us like Clinton?

Who is "us"?

> You KNOW you received my cash,

No, I didn't. Not under any name or clue that I
can trace to you, Bucktooth.

> just admit it and I'll drop this whole thing!

All you can drop is a load in your britches, harelip..

> Is there a law against mapping a cell system? or a listening to a data
> channel?

Yes. Try the ECPA of 1986, you dipstick.

> For someone who makes his living from selling books on how to convert a
> scanner to receive cell calls, you're pretty stupid for ripping on me for your
> livelyhood.

Geezus, Tylerena....you really are horney for me, huh?
You're wanting some of me real bad, I see. Sorry,
but I can't accommodate you other than to slap a
booger outa your juvenile schnoz and feed it to you.

> >*You* ought to know enough to not send MONEY in the
> >mail. And if you sent a check or M.O., then you have
> >the means to trace it and *prove* your claim.
> >
> >So prove it. Tylerena.....

> Aparently you've got me. I sent cash. It was only a couple of dollars.

Well, what name did you send it under? I don't
give a hang for "a couple of dollars". But we do
make a record of everything that comes in and goes
out. So give me your name that you sent it under,
or even the damn Zip Code and either your first or
last name....if it ain't Tyler. I can check.

But the thing is, dipstick, postal workers steal
cash out of the mail.... that's one possibility.
Another is that it was simply lost. Another is
that we got it and didn't know what to do with it
if you didn't provide a return address and a name
and say what you wanted. And lastly, Wingnut, we
don't charge money for beta tests. Occasionally
we ask for a SASE and an extra stamp. THAT'S IT.

> It's too much of a damn pain in the ass to send a
> check or a money order for that much.

Horsefeathers! A check couldn't be easier. And it
offers PROOF. And it's safe, too.

> That's where you are ripping people off!

Who are "people"? You're the only one claiming that,
and the only one who ever claimed it. Reason being
is that it doesn't happen.

> Of course there's no way I can prove I sent you
> a few dollars.

Sure there is!!! Give me the name or other clues as
to WHO sent it so I can look it up. If I find a record
of it, I'll send it back to you plus a damned buck for
your time and trouble.....and I'll report it here.

Mistakes do happen....on BOTH sides. Plus in the
middle. Like damaged mail, fer instance. If your
return address was ripped off, we might not know who
and what for. A hundred things could have happened.

But give me a clue to WHO sent the money and I'll check
on it. A couple of bucks ain't beans, WingNut. You send
me a hundred-thousand and I just might rip you off. But
not a couple a bucks, liverlips.

> I could probably look up your add for PRO-43 beta testers on
> deja-vue, but that's been over a year ago! It's your word against mine Bill,
> and of course you would never lie..... everyone knows that.

That's right, birdbrain....anyone who has ever dealt with
me knows I don't lie. Now what's this PRO-43 "beta test"
you're talking about? There's another disparity in the
crap you're spouting. You go right ahead and look it up
and post it here, prick. DO IT!!

> Go ahead, fess up. If you admit it, I'll drop this whole thing right now and
> NEVER, say another bad thing about you.
>
> You have my word.

You gotta be pulling my leg? Or you don't understand.

First of all, your word ain't worth the gunk in
your belly button.

Secondly, I don't deal with snotballs, cheats, and liars.
And you're looking for a deal. No way, Jose.

Thirdly, your story is full of holes. So YOU prove
the case.......OR.....give me enough information to
check my records...and let me prove the case.

Fourth....I don't process or even handle the incoming
mail. All I have to go on is: tyler@nospam.com and
there are no records of receipts of "a couple of bucks"
from anyone named Tyler anywhere within the last couple
of years.

Fifth.....I don't CARE if you go on badmouthing me. In
fact, you have my blessing to step up the pace and up
the ante a little. Do it, Tylerena, don't talk about it.
Don't threaten me. Don't intimidate me. I don't respond
favorably to foul play. And you are a foul, fetid, fairy.

Your only choice is to play it straight with me. If you
won't do that, then go snivel to Petey Joe Boe, Johnny
Mackey, and whoever else will listen to you. And watch
me give a hoot.

Go ahead, Tylerena, test me.

Well, well, well......

> But what did you do with the stamps on the envelope I sent? Did
> your "receiving department" take the stamps without you knowing?
> Come on, You know you got it.

I don't ever know about the incoming mail unless it's
expressly for me. And as for the beta stuff, the SASE
and extra stamp are usually required for the overweight
materials.

> The article in question: Beta Testers Wanted for a Scanner Modification
> From: bcheek@cts.com Jan 30th, 1997
> Do I still get ripped off?

I don't have a clue other than YOU are not on my beta list.
Why aren't you on it? I don't know, other than your
name was not passed to me from the mail room. If they
had received your SASE and extra stamp, I would have
received your name and you would have been put on
the beta tester list.

Did you use a fake name? A different name? Did you
write legibly? Did you write at all? We occasionally
just get a SASE and a stamp with no idea of what it's
for. In those cases, we usually send out product
literature.

A dozen different things out of our control COULD have
happened to your SASE and 32-cent stamp, Tyler.

Why the hell would I rip you off for a stamp? What
possible sinister action could be associated with
32-cents, Tyler?

You slip me a hundred thousand in cash and we'll see
what I do from South America. But 32-cents?

> and then a stamp with the left foot for good measure too.

Aw, let 'im go, Sal. It was pretty big of him
to check on what he was talking about and then
'fess up he didn't have it exactly right.

I'd have done it, too. I was waiting for him
to give me a zip code and a name I could check,
and if I saw we had a couple of unexplained
bucks, I'd have sent 'em back with an extra
one for interest, and would've mentioned it here.

Anyway, all's well that ends well, and if it's
a matter of a stamp or two, I'm sure that can
resolve itself in a short time. Ain't nobody
rips off a couple of stamps. More'n likely we
didn't know what it was for and sent 'im some
product literature. That kind of thing happens.
And sometimes the dern post office eats things.

Later....

You can get the listing from Optoelectronics....OR you can run over to
a page on Steve Hancock's website that give the CI-V specifications
needed to operate the OS456 or the OS535. Go to
http://home.ptd.net/~pro2006/os456.html and that should get you
started.

Valued Customer <Natas@onmaps.com> wrote:

> This is the most hostile NG ive ever seen.

Ho ho....you ain't seen many ng's, eh?
There's some cyber groups where they'll
take off your head and dump raw sewage
down your neck and then send in a couple
of sewer rats to "clean up".

But you are right about the hostility in
general. I never encountered much of it
before about 1991. Something happened
that year - I dunno what exactly, but the
first flame wars I ever really experienced
happened then.

Before 1991, scanning was one friendly,
sociable group, dating back to the mid 70's.
1980-90 were just too cool.....we didn't
network by computers much in those days, but
via letters, CB, Freeband, and ham radio,
and local pizza club meetings, we sure had
us a hell of a nice time.

But in 1991, something happened. And it kind
of happened simultaneously on a number of
different fronts, from the FidoNet BBS scene,
to the GEnie Ham forum to the Compuserve
scanner forum...and even AOL...which was called
Apple On Line back then.

People.....a few at first....just turned snippy.
Since then, it's more and more....they hide
behind their keyboards and monitors knowing
good and well they're omnipotent and that no one
can spit tobacco juice in their eyes.

And so they unload at any prime target. The
result is you don't see too many "prime targets"
around anymore. They've headed for the hills or
somewhere else that's safe.

I've been inclined to go find me some better
things to do, too.....except that I handle
things a little differently. I sort of like
"excitement" where there's an element of fear
or intimidation. It turns me on instead of off.
Hell, I went to Vietnam, not because I wanted
to, but because it scared me. I do lots of
things because they scare me.

Like computers. Good grief, back in '83 I was
publishing from an electric typewriter. Then
it crapped out and I was faced with buying another
one or getting a computer. I was afraid of
computers, so I got one. That was an Apple IIe.
I stayed with it until 1990 when I realized I was
afraid of MS-DOS.

So I snagged an XT....followed by some 386's,
and then 486's and now Pentiums. I was scared
of BBS's so I set up one of my own in '91.....
blah.....blahhhh.....blah.... point being these
imbecile jerkoffs who'd ruin the hobby for everyone
ain't about to run me off. The more they try,
the more it kind of adds gasoline to my fires.

But that's the thing....these snotballs are used
to zeroing in on a "mark" and watching 'em run
for dear life. Me, I sort of raise a leg and
rear up and dose 'em a little and they don't
understand what hit 'em. I was supposed to run;
not break wind.

Ahhhh, but life is neat with its little surprises.
And we'll break these twits of sucking eggs yet.

Heh heh heh.........

Anyway, the hostility comes from a noisy minority
and until the majority tire of them, they'll stick
around to do their thing. We probably should laugh
at them more, actually. Once they learn they're
just providing FREE entertainment, they'll go find
'em something else to do where the pickings are
more serious......and rewarding.

Yea, I used the name Bill Cosby and used the White House as a return address.
COME ON!

>A dozen different things out of our control COULD have
>happened to your SASE and 32-cent stamp, Tyler.

I believe it was $1.50 or so because of the extra weight! It wasn't a run of
the mill stamp.

>
>Why the hell would I rip you off for a stamp? What
>possible sinister action could be associated with
>32-cents, Tyler?
>
>You slip me a hundred thousand in cash and we'll see
>what I do from South America. But 32-cents?
>

You STILL don't make any sense witht that argument.

Normally, I don't weigh in on the flame wars but I have to say Tyler that if you sent cash you have no one to blame but yourself. Blaming Cheek is way out of line. How can you prove your money even got there? Who's to say it didn't get lost in the mail or stolen by some crooked Post Office clerk? You're the one who goofed Tyler and calling Cheek a crook and an asshole does not change that fact.

If I were Bill Cheek, right now I'd be consulting my lawyer about suing you.

Joe

You done went and got me feeling nostalgic Bill. I can remember sending away for the old RCMA newsletter back in 1986, then getting involved with Northeast Scanning News and Les Mattson's crew shortly thereafter. I used to drive 5 hours to NJ every summer for the NESN Picnic. I even hosted the NESN Spring Meeting in NY for a few years (and the associated Friday Night Molson Drinking and Cellular Telephone Monitioring Session). Those were great days. I made a lot of friends through this hobby.

Somehow I think computers helped to ruin this hobby. No one seems to want to take the time for a good old fashioned eyeball meeting anymore.

> but you have to try.

You are probably aware that very few radios cover the mil air band
let alone the FM broadcast band. These are usually reserved for the
top-of-the-line units which obviously command a top-of-the-line
price.

In today's market, the only radio which seems to fit your criteria
is the PRO-26 which is being discontinued for $200. But if you're
not willing to call a store or two, or simply go into one and have
them look up where the closest store is with remaining units and
ship it to them, then I don't think you want this radio too badly.
Especially considering your price and desires. These type of radios
are usually only gotten for $350+.

You might also want to check with Grove Enterprises too as they were
getting rid of remaining stock for $190 I believe.

Good luck!

First of all what does this post have to do with a radio scanner news
group? Nothing. The original poster is one of those people who suck up
to th cops no doubt, you know th kind, they hsave a 100 club sticker in
their rear window. thinking it will get them out of a ticket. We pay
cops to do a job just like lawn boys and grocery checkers. If they get
killed in the line of duty that's part of the game they sighned up for.
The dumb ass driving a cab gets offed by a nigger crack head for his
cigar box very seldem makes national news and hardly ever gets a
memorial. Same thing goes for the retard woeking at Jack in the box who
gets blown away for $47.
Post this drivvel if you may but post it to the proper NG.

The best I got was 12 miles with an inefficient base antenna setup.

I got it from an auction and it came with boosters.
A standard cordless phone puts out milliwatts. My long distance
unit put out 4.5 watts and the booster raised that to 30 watts.

:Boy,,,,,the things the FCC doesn't want you to have....
:I wonder who buys them off????

Is there any need to ask? But can you imagine the mess with everybody
wanting their own exclusive two frequencies for 30 miles around?
Ordinary cordless can reuse the same frequencys every half mile or so.
I do think there is a case for something inbetween for people with
larger properties.

Barry

507. Re: Orange County, CA 800Mhz Public Safety Radio System: WNSS311

Newsgroup: rec.radio.scanner
Date: 1998-03-04 00:00:00 UTC
From: Jason Robertson <"Jason Robertson"@idt.com>
Message-ID: <34FE1D1C.22DD@idt.com>
Source record: 168433

Orange County's new 800MHz. system is a Motorola type II digitial trunked system. Astro Sabers and STX-3000's will be the portables and Astro Spectas will be the mobiles. The system is very 'cellular' in design and no radio will need more that 7 watts RF output to make it

Most systems will be digital and render scanners useless - even trunktrackers. All city police and fire and county agencies will also be on this system.

Cutting agencies over to the new 800MHz system has been pushed back a few months. Possibly late 1998 for the south Orange County area - fire services first, patched into the existing system until full cut-overs occur in all fire agencies.

Because of recent legal activity by a neighboring city in LA County, the south county area should be completed ahead of north county (Some people just don't think that a 150 foot tower is a beautiful thing.

"Backbone" equipment (repeaters etc) is installed and powered up at several remote radio sites including controlling equipment at the Loma Ridge communications facility.

Full cut-over should be within the next 2 years.

>same....

As I wrote the original poster, both models are attractive.
However, I prefer the BC9000XLT.

In addition to an alpha display and more channels,
the BC9000XLT affords:

twice as many channel banks,
wider frequency coverage,
selectable AM/FM/WFM modes,
hit counter,
an additional 50 kHz step size,
and a per-channel attenuator.

>You could also use a #2 pencil to reapply the carbon contacts, work's
>great.

Yes, I have repaired them this way.... and they have lasted from about 2 days to 2 weeks for me. It is difficult to make the carbon (pencil lead) dense enough to be a trouble-free contact for a long period of time without adding some sort of binder which in itself has to be conductive or at least somewhat inert.

Just trying to grind up a #2 pencil, mixing the graphite with rubber cement and spreading on a paste doesn't work any better than just "writing" onto the rubber directly. Something in between is called for... like the original deposition.

I have found that an emergency repair of this type can typically get you by for a long enough period until the new keypad shows up to solve the problem for real!

I would love to hear if there is a better way to do this type of repair...

Steve

Aparently you've got me. I sent cash. It was only a couple of dollars. It's
too much of a damn pain in the ass to send a check or a money order for that
much. That's where you are ripping people off! Read your above paragraph and
see how you rip everyone off! Of course there's no way I can prove I sent you
a few dollars. I could probably look up your add for PRO-43 beta testers on

deja-vue, but that's been over a year ago! It's your word against mine Bill, and of course you would never lie..... everyone knows that.

Go ahead, fess up. If you admit it, I'll drop this whole thing right now and NEVER, say another bad thing about you.

You have my word.

I ordered a set of the originals for $25 each from Rat Shack, but that's been about a year ago. I was going to order a whole ton of them and put 1000 channels in my PRO-43 until I found out the eeproms would cost $200 for that many.
I've been looking for replacements too. The closest I've come is the 93LC67. I have a few of them, but haven't had the time to do the mod and try them out. I can't see why they want $25 and $35 for them. They are very cheap parts. You could probably even get some samples of them if you called your local parts distributer. (other than Rat Shack)

I'll have to get around to that mod.. maybe this weekend and see if they work. The 67's are under $2 !!!!!!

Someone has probably mentioned this already, but I read a while ago that there are repair kits for rear window defrosters. In these kits, there is a tube of conductive stuff that is used as the actual repair agent. The goop is placed on the keys(NOT THE PC BOARD) to make a new conductive area. (I've never tried this, so it would be interesting to hear results)

Anyone?

Your stamps? You're worried about your stamps? You call a man a
thief and a liar then you find out you're wrong and you want your
stamps back? Maybe he should give you a stamp with the right foot
and then a stamp with the left foot for good measure too.

Radio spectrum utilized by Iridium services include the L-band
(1616-1626.5 MHz) for voice communication with Iridium subscribers:
and the Ka-band (19.4-19.6 Ghz for downlinks; 29.1-29.3 Ghz for uplinks)
for gateway and earth terminal transmissions.

The frequency plan for Globalstar
Terminal to satellite: L-band (1610-1626.5 MHz)
Satellite to terminal: S-band (2483.5-2500 MHz)
Gateway to satellite: C-band (5091-5250 MHz)
Satellite to gateway: C-band (6875-7055 MHz)

source: Globalstar and Iridium websites.

> >Surely you have a copy of the cancelled check, or money order stub....

> Hey, maybe the guy don't want to leave no paper trail. I can relate
> to that.

Maybe. But it's plumb ignorant to send cash
through the mail. That's the first strike.

Strike two is that the little peckerwood has
been on a hate campaign against me for the last
couple of years. If he hates me so much, why
the hell does he send me cash? Yeah ri--ght.

Strike three is that we don't charge money
for the kind of thing he was sniveling about.

And if any of them strikes is a wildcard, then
Strike 4 is that I don't have a record of him
doing anything with us.....not even requesting
product information.

And if you just insist on another wildcard, then
Strike 5 is that a couple of years ago, the little
stinkbait was bragging and whooping it up here on
the newsgroup about how he had monitored his local
cellular system so much that he had it "mapped".

Now Strikes 1 and 2 are plumb gross ignorance, and
Strike 5 is even worse....'fessing up to committing
crimes right here in public.....and that doesn't
agree with the theory that he doesn't like to leave
"trails" because anything you write to a newsgroup
leaves a trail....and 'fessing up to a crime right
here on the trail suggests that he doesn't give
a hang about who sees what.

The point is, the guy is lying through his buckteeth
and/or isn't making a lick of sense on any account.
Hell, the little prick won't even say HOW MUCH
bucks I cobbed off him.

He just got a new window pane put in his belly button,
so that probably explains everything, if you get down
and think about it.

Later......

I purchased a TT-7 Touch Tone Decoder from Ramsey Electronics, and assembled it exactly as specified in the instructions. The only problem is that in one part of the directions it says it can decode from an audio output from a radio, simply by connecting it to the audio input of the TT-7, that is what I did and it didn't work.

Then just below that it says to construct a circuit for use with a radio!? These instructions are messed up. The circuit is only described in a diagram and I haven't the foggiest on how to construct it. If anyone out there has one of these devices and knows how to get it working properly please let me know.

Not really. Read on, Toilet Boy. I typed it real slow so you can
keep up. Be careful your lips don't hurt you as they move when you
read. Your doctor has warned you before that your harelip can bounce
around and hurt you when you read the truth. Don't forget the bib, you
know how you drool and froth.

> About 18 months ago I was in a work situation where I had internet
> (T1) access but NO internet address.

A transparent lie to cover up the fact that you were stealing access to
the internet. And, that your employer caught you stealing access and
terminated you for theft of services.

> This was for a special project regarding digital communications accross
> the internet. I expained the situation MANY times back then.

You never "expained" anything. You did start the lie about not having
a real internet address to cover up your theft of services.

> Eventually, we did get access to a mail server & then I started using
> an internet address

You got caught stealing access and had to find another way onto the net.

> I had to enter a bogus address into the Netscape mail program to post
> to newsgroups. All the no-place, no-where, no-address listings
> were MINE, & I CLEARLY IDENTIFIED MYSELF WITH NAME & CALLSIGN!!!!
> Eventually I used the hotmail address for a short time then got
> the USA.NET address for a permanent mail address. (which I still
> use today)

So, we're going to ride the elliptical ferris wheel regarging the
definition of "bogus" now. It comes down to one unescapable fact:
You stole access to the net and HAD to use phony addresses to hide
your thefts and illegal access.

> The idiot.org address I did not use. That was a forged post.

Plausible, as I stated in my original post.

> I never gave any fraudulent address.

Your admittance at using the phony addresses contradicts your statement.
You're still a liar and a fraud.

> I always stated I did not have an e-mail address!

True, you had to hide your theft of services and your ego forced you
to brag about it by flaunting your name and callsign.

> You hero, BILL CHEEK, used fraudulent addresses & DID NOT give his
> real identity, WHEN HE DID INDEED HAVE A INTERNET ADDRESS!

I've never publicly or privately proclamed Bill Cheek a hero. Your
delusional reality sees anyone who doesn't worship your pitiful
existence as a Cheek sympathizer. However, the issue here is not
Cheek's use of, to quote you "a fraudulent address" when he had a
real address. It is your use of fraudulent addresses in lieu of a
valid account and address. It is your lies and theft of services.

> What a fool you are!

Let's see, you admit to theft of services after I confronted you with
the evidence. You admit to using fraudulent addresses as well. As
usual, Toilet Boy, your prozac abuse and Richard Simmonds pumping you
silly has made you dizzy and confused. It is you who is the fool.

Hello,

It's kinda scary that some would think being prohibited from
eavesdropping on private conversations, "is a dark day for freedom".
Restrictions on listening to others telephone conversations is as old as
party-line telephones. Tes the original Tauzin bull was broad in it's
restrictions. It is my understanding the ARRL along with other
interests was able to get the billrewritten in a more favorable form.

2 things about this:
A) I doubt it will happen anytime soon. They have been talking about this for a few years here in Ramsey County too but nothing has happened yet. These systems are good but from what I've heard are unreliable. Getting them to work properly sounds like a nightmare.
B) Cost. They are expensive and would require all the units to be refitted with new radios. I would estimate Hennepin County has about 5,000+ vehicles (police, fire, emergency, highway workers, etc...) adding up all the cities and towns they work with. Last I heard, Hennepin County had a little funding problem (just a rumor but could be true) and might not have the money. I did notice they have some 800mhz freqs already in use. Minnetonka and Bloomington already run trunked systems, Eden Prairie might be too.

Bottom line, it could happen but I doubt anytime soon. St.Paul and Ramsey County have been discussing this since I started listening to scanners 15years ago.

You have to remember that this is a _REAL_ WORLD_ 2_way_ radio, not a scanner as such! If you are a working radio user, be it public safety-taxi driver-lineman-delivery driver- et al.... can you do your primary job AND monitor more than 16 separate channels at the same time? I can't! Now if my job is to LISTEN to the radio, I can do maybe 25-50 depending on what the normal traffic is per channel, but I cannot do that well with ONE radio..... there will ALWAYS be a situation that requires "locking" on one channel or more for a reason... and there is NO scan priority system that can ever be dynamic enough to deal with that...!

Sure, maybe the Kenwood can have a bigger scanlist... but see which one you will find in the majority of fire apparatii and patrol cruisers....

I just got the scanner and I need to know what type of diode, (the one that enables keylock features etc, ex. "d1, d2, d3, d4") is it. I am heading to radio shack, but I feel they wouldn't know what I'm talking about (no offense, just from previous experiences) I am in need of getting this diode, if you can e-mail me or post the part number I will be forever thankful. Thanks to all in this group who have helped me with a lot of my scanner problems.

I've seen "ear microphones" that work on the premise that if you can hear yourself talk, so can a microphone. I haven't played with them very much, but a bunch of tech weenies I know seem to like them. The nice thing is that you end up with both parts of your radio in your ear.

I always wondered if they would make good emergency service equipment...

<shooter2@spamicide.vol.com> writes

Hi Jim,

>Who repairs the AR 1000XLT? Mine has a broken case, and needs some
>tuning?

ACE Communications were the Importers of the AR1000 at the time is was a
current receiver so they may still have some parts you might require.

EEB/EDCO are the current AOR distributors so they would also be the
place to check but whether they will have a spare case etc you would
have to check.

G&G Communications are one comapnay who have a good reputation for
repairs although I don't know how keen they will be to look at the AOR.

Hope that helps.

Cheers,

569. FS: Uniden BC3000XLT handheld scanner LNIB - $285 shipped

Newsgroup: rec.radio.scanner
Date: 1998-03-05 00:00:00 UTC
From: bodoh@dakota.net
Message-ID: <6dm6ic$kr0$1@server2.dakota.net>
Source record: 168194
Cross-posted to: rec.radio.swap,rec.radio.scanner

For sale: Uniden BC3000XLT handheld scanner (current Uniden top-end model);

Coverage 25 Mhz to 1.3 Ghz (minus cellular and 550-760)
400 channels in 20 banks
300 ch/sec search, 100 ch/sec scan
10 priority channels
automatic search and store
selectable (AM/FM/WFM) modes (receives TV and FM broadcast audio)
selectable attenuator
data skip (skips over data channels)
WX key
typical features such as lockout, battery saver, selectable search steps
built in nicad
triple conversion

This radio is in 'mint - like new' condition, with; box, manual, duck, AC adapter - even packing materials! Also included is the optional leather case. Note that for those hung up on cellular reception,it reportedly receives cellular images clearly from 1005 to 1030 Mhz. This radio is one of the best at rejecting overload and intermod. The 20 banks, search store feature, TV and FM broadcast reception and leather case make it ideal for travel. Reason for selling: Have two and need cash.

My price is $285, paid in advance by postal money order, I pay your choice of UPS or USPS shipping. No trades. Lower 48 USA only. Please Email with questions...

Tom, N0YGT

==========

This is a message that John Mackey posted throught the same
Sprint Net dialup POP out of Portland, OR! 5 minutes earlier!!!

NNTP-Posting-Host: 206.133.225.31

The NNTP-Posting-Host IP address resolves to:

sdn-ts-001orportP12.dialsprint.net.

X-Mailer: Mozilla 3.01Gold (Win16; I)

indicates that it was cancel from Netscape Gold 3.01 under
Windows 3.1 (16 Bit)

It appears that the Third Party cancel of Bill Cheek's post
originated from the same News Server and posting Host as the
following post that John Mackey posted 5 minutes earlier!!!

Path:
moon.pepperdine.edu!nntp2.cerf.net!peerfeed.ncal.verio.net!newsfeed.wli.net!su-news-hub1.b

Can anyone provide me with the freqs for the Military Police at
Ft. Gordon...seems that some of the published ones are no longer
in use...thanks,

Ed Ziegler

575. Motorola Spectra Scan Ques. - Limitations

Newsgroup: rec.radio.scanner
Date: 1998-03-05 00:00:00 UTC
From: "Dr. Radio" <drradio@NOSPAMhotmail.com>
Message-ID: <6dmgtu$h90$1@nnrp2.crl.com>

I have a UHF A5 Spectra and although the unit has 128 possible modes, apparently, you can only have 16 channels at a time defined in the scan list....major problem. If one sets up zones, then you can have 16 per zone, but only one zone can be scanned at a time.

Anyone know if the A7 and A9 models have the same limitations?

Mot. glossy spec sheets "forgot" to mention these limitations (an honest mistake????). No other radio I have ever used has such limitations - especially when one pays the price they want for these units.

About ready to go back to my commercial Kenwood equipment...

From: Ira Chineson <irac@worldnet.att.net>
Message-ID: <6dmqgj$fd0@bgtnsc03.worldnet.att.net>
Source record: 168215

WASHINGTON (AP) ï¿½ The House decisively passed a measure Thursday to make it illegal for people to use scanners to intentionally eavesdrop on cellular phone calls.

By a 414-1 vote, the House approved a bill that would prohibit people from modifying scanners to "intentionally intercept or divulge the content of radio communications.'' The bill, which would clarify and expand current prohibitions, would also eliminate the current $2,000 cap on penalties for violations.

The bill arose after a Florida couple used a scanner to listen and tape-record a 1996 cellular telephone conversation that Rep. John Boehner, R-Ohio, was having with House Speaker Newt Gingrich, R-Ga., and House Majority Leader Dick Armey, R-Texas.

"Little did I know that my words and my expressions were being recorded and end up as part of public relations campaign to try to destroy the speaker,'' Boehner, No. 4 in the GOP leadership, said during House debate.

The tape made its way from Florida to the House ethics committee and was published by The New York Times.

"I speak from personal experience about the outrage and sense of powerlessness one feels when they learn that their expectation of privacy has been destroyed,'' Boehner said.

In addition to restrictions on individuals trying to eavesdrop, the bill
would also extend current restrictions on scanner manufacturers to prohibit new machines that would intercept new conversations on the new generation of digital cellular telephones. And it would extend the Federal Communications Commission's ability to investigate and enforce violations.

The bill's sponsor, Rep. Bill Tauzin, R-La., said it would expand the right to privacy in the digital age.

"We in government ought to do everything we can to protect that expectation of privacy. That is what this bill is about,'' he said.

The Senate has not yet passed a similar bill.

591. Can Pro-46 with Date Code 5A4 take cell mod?

> Are you on drugs, Mackey?

Does your father know you're using his netnews account, little boy?

If you really don't know know the meanings of
`bogus' and `fraudulent', then you're an idiot.
If you do know the difference, and you're deliberately
baiting Mr. Mackey, you're a scumsucker.

`Bogus' means `wrong, not corresponding to any actual situation'.
`Fraudulent' means `intended to deceive.'

If I said `Remember last week when you admitted you were a
moron on the CBS Evening News?' that would be bogus. It wouldn't
be fraudulent, because only an idiot would think that I intended
people to believe it.

Same thing here.

Greeting all, I'm new to scanning and I want to buy a HF antenna. A friend recommended the McKay Dymek DA-100E. I saw an ad in Monitoring Times for the H800 Skymatch, it is about $100.00 cheaper. I am a believer in the " You get what you pay for" theory. Does anyone have any input as to which antenna I should get? Thanks for the help.

"dave kay" (arrowroof@hotmail.com) writes:
> it is now illegal to convert scanners to cell freqs.
>
> law passed today.

Huh!! What happened the the Electronics Communications Privacy Act of 1986? (ECPA) and the April 1994 ammendment to it? The ECPA made it illegal to monitor cell (and other services)or to sell scanners that could monitor cell phone. The April 1994 Ammendment added cordless phones and other services to the original law, plus that made it illegal to sell scanners that could be modded to get the "restricted frequencies"

So what's the big deal, it has already been illegal in the USofA for over 10 years?

Up here in Canada we have NO RESTRICTIONS on what we monitor, but we are by law prevented to divulge what we heard, or to use what we heard for personal gain.

My company bought some communications devices for our Fire Department called "Loud Mouth." They are basically just an audio amplifier with speaker, volume control, and on-off switch that mounts on the fireman's belt so that he can be heard at a noisy fire scene. The belt unit attached to a throat microphone with a coiled cord. The connector on the end of the cord was a type "F" (I think) - same as a cable TV coaxial connector, and you can buy adapters for those. The microphone itself was attached to a curved piece of spring steel that holds the mic against your larynx. I was surprised that the throat mic could reproduce the spoken word so well, and you didn't have to talk very loud to make it work. But the company was looking for ways that a fireman could communicate on the radio while wearing a self contained breathing apparatus, and they finally decided to use a different method (so I picked up the old units that they were going to throw away).

You can probably find the manufacturer of the Loud Mouth, if it's still made, advertised in magazines that cater to Fire Department personnel.

Boy, your web site takes a long time to load!

- Harold

This is rather vague, but the actions taken here could be on either
the transmitter end or the receiver. It really doesn't specify.

Hopefully more will develop on this soon.

WASHINGTON, March 5 (UPI) - The House (Thursday) voted 414-1 to pass
a bill to strengthen privacy protections for wireless telephone users.
The legislation was proposed after a Florida couple intercepted and
taped a car phone conference call between House Speaker Newt Gingrich
and other members of the Republican leadership.

How long you and Mackey been licking each other, you whiney bitch ?

>
>If you really don't know know the meanings of
>`bogus' and `fraudulent', then you're an idiot.

Are you going to throw some lame dictionary definitions
at me? Or are you going to accept the words for their
common and practical usage?

>you're a scumsucker.

Guess the only difference between what you *think* I am and
what you ARE is one lonely "s".

>
>`Bogus' means `wrong, not corresponding to any actual situation'.
>`Fraudulent' means `intended to deceive.'

Care to show how this is even remotely relevant to Mackey's statement?

What crawled up your ass today? Or was there no room with Johnny being there
and all?

>
>If I said `Remember last week when you admitted you were a
>moron on the CBS Evening News?' that would be bogus. It wouldn't
>be fraudulent, because only an idiot would think that I intended
>people to believe it.

And an idiot would take you to the cleaners in court if you thought for 1 second you could make such statements and get away with it.

What a friggin moron you are. It's no wonder you share the same delusional thought patterns as loose mind Mackey does.

Looks like YOU'RE the one who enjoys posting flame bait crap.

If you're gonna make another 1/2 assed attempt at correcting something I say, at least get some minuscule portion of it right, will ya pal?

Ira Chineson (irac@worldnet.att.net) writes:
> WASHINGTON (AP) • The House decisively passed a measure
> Thursday to make it illegal for people to use scanners to
> intentionally eavesdrop on cellular phone calls.

This has been illegal since the Electronics Communications Privacy Act of 1986
So Congress passed a law making it illegal do do something that is already
illegal... YOUR Tax dollars at work!!!

> By a 414-1 vote, the House approved a bill that would prohibit
> people from modifying scanners to "intentionally intercept or
> divulge the content of radio communications.'' The bill, which
> would clarify and expand current prohibitions, would also eliminate
> the current $2,000 cap on penalties for violations.

It was illegal to sell scanners that could be modified to get cell freqs
in the 1994 Ammendments to the ECPA (1986).

> The bill arose after a Florida couple used a scanner to listen and
> tape-record a 1996 cellular telephone conversation that Rep. John
> Boehner, R-Ohio, was having with House Speaker Newt Gingrich,
> R-Ga., and House Majority Leader Dick Armey, R-Texas.

The Florida couple were charged under the ECPA, so the law was already
in place.

> "Little did I know that my words and my expressions were being
> recorded and end up as part of public relations campaign to try to
> destroy the speaker,'' Boehner, No. 4 in the GOP leadership, said
> during House debate.
>
> The tape made its way from Florida to the House ethics committee
> and was published by The New York Times.
>
> "I speak from personal experience about the outrage and sense of
> powerlessness one feels when they learn that their expectation of
> privacy has been destroyed,'' Boehner said.
>
> In addition to restrictions on individuals trying to eavesdrop, the
> bill would also extend current restrictions on scanner manufacturers to
> prohibit new machines that would intercept new conversations on
> the new generation of digital cellular telephones. And it would
> extend the Federal Communications Commission's ability to
> investigate and enforce violations.

In the ECPA it is illegal to monitor "digitally encryted" sources, which
the PCS phones are, so again it already is illegal.

> The bill's sponsor, Rep. Bill Tauzin, R-La., said it would expand
> the right to privacy in the digital age.
>
> "We in government ought to do everything we can to protect that
> expectation of privacy. That is what this bill is about,'' he said.
>
> The Senate has not yet passed a similar bill.

Huh!! What happened the the Electronics Communications Privacy Act of 1986?
(ECPA) and the April 1994 ammendment to it? The ECPA made it illegal to
monitor cell (and other services)or to sell scanners that could monitor
cell phone. The April 1994 Ammendment added cordless phones and other
services to the original law, plus that made it illegal to sell scanners
that could be modded to get the "restricted frequencies" You should
pay attention to another bill that will make it illegal to monitor almost
everything else. Monitoring Times (http://www.grove.com) and Popular
Communications magazines has covered the new Bill's in detail. In simple
terms it covers most of the radio comm spectrum...

So what's the big deal, it has already been illegal in the USofA for over
10 years?

Up here in Canada we have NO RESTRICTIONS on what we monitor, but we are
by law prevented to divulge what we heard, or to use what we heard for
personal gain.

>Is there a senate version floating around?

You can bet that there will be and it will pass, and the Prez will sign it.....then Butch Reno is going to send an M1-A tank to every one of our homes and take our scanners. (well, this is at least what they SOBs in DC would like to do)

This *IS* that bill.

The wording of the original "Communications Act of 1934" changes from
"intercept and divulge" to "intercept OR divulge." In other words, if
you are a ute- or milcom monitor, you may be outta buisness. (Well, not
you; your legislators apparantly think. But _we_ are stuck.)

Well, I plan to give the maximum allowable contributions to Mackey and
Tauzin's opponents in the next election. What else would I do with the
money, buy a radio that listens to the 49 meter band exclusively? :-(

Let's see... .IWStirn is really Bill Ewald; ***John Mackey*** is not the real Mackey, who is **John Mackey**; and Bill Cheek really isn't the ***John Mackey*** who is cancelling posts made by Bill Cheek; and George Vetterle, Hank Hampton and the CB Guy really are Tyler Hansen (but on different days); The only thing we know for sure is that Brian is off whining that this newsgroup is full of meanies.

Hey, people can't we just get along? It's gotten to the point that it is impossible to know who's who and what's what. Anyone want to declare a truce? Nothing ambitious...say 24 hours no one will post anything that does not have anything to do with scanning. Violators will be exposed as people who really are only interested in making trouble and then roundly, universally spat upon or some such thing.

I vote that Saturday, March 7 be Armistice Day. After that, anarchy prevails and we won't bother talking about scanning any more. Okay?

We recently released a shareware program for the 895 which does some, but not all of the things you mentioned. Currently, we are working on a ver 2.0 update which fixes some bugs and adds some new features, and that is probably as far as we will take it, as there really has not been that much demand. It sounds like your program will be great!

Here are a few quirks that we ran into:

When polling the scanner, you will need to have your program wait until the scanner finishes responding to the query. The reason for this is the scanner is at 9600 baud, and most pentiums will have moved on to the next command long before the scanner has finished sending a response back. This means that you will only recieve partial replies, which can result in frequencies not being uploaded, errors and all sorts of problems - trust me I know. The main reason for the complete rewrite in version 2 of our program was this glitch. Basically wait for the scanner to send a line-feed character back - it will do so at the end of each "message".

Also, when storing your ID's, you will need to maintain a fixed format. For example, the ID 76 be reported by the scanner as 000076. The ID 200-1 is really 200-01 and so on. This is essential if you want to lookup data in a database based on the ID returned by the scanner. One feature we are implementing is an "on the fly" conversion so if a user has stored his ID as 76 it will be converted to 000076 by the program when it is saved to the database, but will still appear as 76 to the user. This is kind of tricky, but it makes for a more user friendly program.

Be sure to emulate the numeric keypad of the radio, if you haven't already. We received several requests for that.

Hopefully this has been helpful, and if you need any more advice or pointers (especially if you are using VB) drop me a line at the email address below.

I agree with the other replies here, and I have had this happen too. What you are experiencing is radio interference from a nearby powerful transmitter, probably in the citizens band. If you have one of those CD to Tape adapters (You know, the thing that looks like a tape with a wire hanging off the end of it?) and an ordinary CB you can recreate this exact scenario.

Set up the CB near a tape player (any kind will work) and pop the adapter into the tape, and just let the plug stick out, don't connect it to anything. Turn on the tape player, adjust the volume to a normal listening level and then key up on the rig. What you should hear is a very overmodulated replica of your own voice, talking on the CB. Happens in my car all the time, when I have the scanner going thru the car stereo via this adapter. The adapter picks up and de-modulates the signal, and presto, you just created a MacGyver P.A. system (remember him, the guy who disarmed missiles and such with 2 rubber bands and a bobby pin?) Try it sometime.

Monark,

>Without fail I get pulled over at least 4 times a month for bullshit
>reasons simply so the officer can fish for insurance violations.

Such as? If you're not keeping your automobile to specs -
registration, inspection, working head, brake and tail lights, etc. -
then those are proper reasons for the stop. Any request for insurance
at that point is totally proper.

If your vehicle is in exact legal condition, try the case and make
sure there is a record made. When you have the officer on the stand,
quiz him about the reason for the stop. If he cannot articulate
sufficient facts to support probable cause to arrest (issue citation)
the arrest is illegal and any subsequent information obtained is
subject to suppression. Any insurance violation he may find after an
illegal arrest will be subject to exclusion meaning the state cannot
make their case.

If the officer suggest that there was another violation (no brake
lights, or something) but he decided to be nice and not cite you for
that, then at least get him on record with sworn testimony to that
effect. Buy a copy of the transcript of the record and keep it in the
event he attempts to do the same thing again later. If you can
establish a pattern and practice of this type of intrusive behavior,
you may be able to build a case against the officer with the Chief of
Police. However, if the Chief is of the same mind as the officer, then
you'll just have to grin and bear it or make your moving arrangements.

The whole issue is moot at this point. Obviously, you're not going to put me into your beta test now. I was just ticked that I never heard a word from you and figured I got screwed and chalked it up to experience. I do apoligize for calling you a liar. I thought for sure I sent a couple of bucks with the envelope to cover the costs of copying the material. But, the question is did your "receiving department" get it or not?

The TK-801S uses one-shot proms for freq. and pl codes. You need the Kenwood KPT-10 programmer to do these proms. Most Kenwood 2-Way dealers or service shops should have this programmer.

> your "receiving department" get it or not?

Not from a "Tyler"; not within the last couple
of years, anyway. We got a lot of Tyler's in
the database, but each one is either known to
us or else the record clearly establishes it's
someone else. None for beta testing.

Oh, and we got no real use for postage stamps
unless to stick back on a SASE that's too heavy
for single unit postage. We use postage meters,
and the system is geared for that. To fart around
looking for a stamp costs more in lost time than
the stamp is worth.

Most of the time, we ask for a SASE and extra stamp
to deter the freebie grabbers who'd send off for
used Kleenex if it were for free. But a secondary
reason is to defray the cost of handling and
mailing, if we're otherwise all set up for the
project, whatever it may be....in this case, beta
testing of some mod or such. The Rx department
gets the mail....sees the Beta Test request....
fishes out the appropriate instruction set....
stuffs the SASE and licks the extra stamp and out
she goes, all in one fell swoop. Only a little
logging in betwixt to make sure we know what came
in and what went out.

Anyway, your apology for the unwarranted side of this mess is appreciated and accepted, and mine is offered for whatever I did that may have been above and beyond the call of duty. Or below it.

Back to even-Steven and a restart from neutral?

Thanks.

Memory for the PRO-26 is on-board the CPU in
its EEPROM bank. You can't get to it. Alas.....

IC-501 is a dual op-amp (analog) that functions
as the "window unit" to ensure the scanner
stops on-freq during searches. It is a patented
Uniden circuit.

IC-502, 503, and 504 are voltage regulators
and aren't of any special interest.

Noooooo, not citizens. Your sarcastic parody
is a bullseye. But I'm not referring to citizens.

I'm talking about Congress-critters and other
federales including the Friendly Candy Company.

All those critters would just love to get their
hands on a "cellular mapper". You heard what
they did to Bob Grove up there in Congress last
year, didn't you?

If you didn't, you would be well advised to find out.

I may be a piece of work as you put it,
but you know something? This is cool.

You are a "feelgood", Smacksie. Yup. Every time
I see your posts....or even THINK about you for
more than a fleeting second, I get all giggly
and fuzzy-feeling. You make me feel good all over.

Because I realize at those moments how, but for
the grace and benevolence of my Maker, I could
be like you, down there wallowing in the dung of
humanity. This feeling makes me solemn and
humble, and I then pray thanks to my Maker for
the blessings in Life that He gave me.

All the guys and gals around the lab here kind
of feel the same way, too, and I'm sure a lot of
the newsgroup people are also thankful for their
blessings knowing they coulda been like you.

So yeah, Smacksie, I ain't much. I'm just a
hillbilly from down in the hollers of Southern
Missouri....but I've done all right for myself
over the years. I survived ten odd years in
and around Vietnam doing exciting stuff that's
probably still classified to this day.

I was real close to the space program....I once
told you that I was a "rocket scientist", and
I was, pal. I dropped a Polaris A-3 missile on
a handkerchief 1800 miles away from the launch
site out near Johnson Island in the Western
Pacific.

I laid surveillance systems so cool and so
sensitive that they could detect an orgy of
fleas on a junkyard dog from a hundred yards.

I even made it up to CEO of a prominent electronic
manufacturing corporation some years ago.

Not too shabby for a crusty ol' hillbilly from
down in the slews and hollers of the Shepherd
of The Hills Country, Smacksie..

And these are only the tips of the iceberg,
Smacksie......and yet, I *know* I am little
more than a grain of sand on Waikiki Beach.

But you know something, Smacksie? However next
to total insignificance I am......I KNOW beyond
a shadow of a doubt that I am the Master Flusher
of the toilet you live in.

That's why I give solemn thanks a dozen times
a day......right from the depth, the breadth,
and the width of my infinitesimal soul.....

Rave on, Smacksie-baby, rave on..... you
can't possibly comprehend the mirth, the joy,
the glee that I've gained from you for FREE.

Ahhhhh, here is the best way it can be described!
Next time you go to take a whiz and see a pissant
on the edge of the bowl....take note of how YOU
look at that poor ant. And then come to the grim
realization of THAT being exactly how I see YOU.

Now do you understand, Smacksie? It would be
nice if you could understand that, and then
try to elevate yourself. They say whale dung
is pretty low.....but it's a mountaintop compared
to your stature, Smacks.

I'd worry about that, if I were you, Snodgrass.

Eh?

652. Comments/Reviews Wanted on RS Pro-67

Newsgroup: rec.radio.scanner
Date: 1998-03-05 00:00:00 UTC
From: BJC <bjc@mydesk.com>
Message-ID: <34FE365A.6AC@mydesk.com>
Source record: 168362

Anyone have a Pro-67. My Pro-60 died (Rat Shack says $200 Canadian to fix it) and I need a replacement.
Both Pro-60 and Pro-67's are still available new here in Toronto. I loved my Pro-60, so how does the Pro-67
compare to it. I know that the 60 is made by GRE and the 67 is made by Uniden (is there a Uniden similar model?). I'd love to get a Uniden 235 but they are WAY overpriced here at $500 Canadian.
Right now the Pro-67 is on sale at RS for $250 Can ($100 off reg price) while the Pro-60 is $400 (reg price).
The Pro-90 is $500 and you don't get the 235 extras, so it is out.

Any help is appreciated.

BTW--I asked this question before but never got an answer...Does anyone know a good scanner shop in the
Buffalo NY area?

Todd-
This is your lucky day. There happens to be a Popular Electronics
article that featured tapping the discriminator output on a SportCat
model scanner. There even happens to be some pictures to go along with
that...you can't beat it. Go to http://www.cylexinc.com/rmpe01h.htm
and search through the article. Print out the pages that are relevant
to tapping the discriminator output. Good luck.

Wiggie

DICK - what a FOOL you show yourself to be again!!!

About 18 months ago I was in a work situation where I had internet
(T1) access but NO internet address. This was for a special project
regarding digital communications accross the internet. I expained the
situation MANY times back then. Eventually, we did get access to a mail
server & then I started using an internet address

I had to enter a bogus address into the Netscape mail program to post
to newsgroups. All the no-place, no-where, no-address listings
were MINE, & I CLEARLY IDENTIFIED MYSELF WITH NAME & CALLSIGN!!!!
Eventually I used the hotmail address for a short time then got
the USA.NET address for a permanent mail address. (which I still
use today)

The idiot.org address I did not use. That was a forged post.

> In light of the abuse you've managed with fraudulent address, your
> ragging on Bill Cheek about the WinRadio issue in the manner you have been,
> makes YOU the hypocrite here, as usual.

I never gave any fraudulent address. I always stated I did not have
an e-mail address! You hero, BILL CHEEK, used fraudulent addresses
& DID NOT give his real identity, WHEN HE DID INDEED HAVE A INTERNET
ADDRESS!

What a fool you are!

You OBVIOUSLY know little or nothing about Bill Cheek to respond
like this.

Bill deserves all the trouble he has gotten here & more.

Perhaps YOU should "hit the road"!

PRO-67 is a typical segmented coverage model designed to replace
the PRO-51 so it has no mil air coverage. And no broadcast FM
so no wide-FM receive.

The 67 is made by Uniden and is basically the same receiver as
the BC235XLT with no TrunkTracking. Pretty good sensitivity with
great interference rejection. Very fast since it's Uniden and
uses 4 AAs compared to the 60's 6.

Nice radio and a good deal when on sale. I posted a review of
the 67 to my site back in July '97. If interested, check out
my PRO-67 page

The problem was not the flame. The problem was the way he did it.
Cursing someone with lots of very nasty language is not the way to get
a point across. If you agree with cussing someone out to make a point,
then I would suggest you restudy the english language. They say people
who curse a lot have limited vocabulary.

I found out that the frequencies I most often listen to might no longer be available for me to listen to.Hennipen county Minnesota is considering a new 800Mhz trunked network to replace thier conventional radio system most cities in the county use the Hennipen County system for Fire dept's, local police dept's, and sherriffs dept..These have been my favorite channels to listen to since I was about 5 years old I've lived in the area all my life.I've talked to a local radio dealer about purchaseing a Trunk Tracker Scanner and he told me it wouldn't help because the new system being proposed was a digital system made by either motorola, Errickson, or EM Johnson, useing the APCO protocal.I found some info on this at
http://www.apcointl.org/project25/information.html#commit
but its been many years since I've taken a communications class could anybody Shed some light on this for me

My question is, are there any scanners out there capable of recieving this type of system, if not are there any in the works by any manufacturers?

is there any way short of swiping a radio from someone, to listen to these systems?

any comments would be appreiciated

Download the beta version of RFBase, an SWL/DX/SCANNER logbook program for Windows 95. For those who get system messages during install saying your system files are out of date, go ahead and let it update as some of the system files with RFBase are dated 1997 which is newer than the newest release of Win95 (as far as I know). You may download it here :

http://www.monmouth.com/~jcorea/rfbase.zip

Give it a try, I think you'll love it !

>law passed today.

Actually, before the bill passed today (H.R. 2369) can become law a companion bill must be introduced and passed by the U.S. Senate. If the Senate bill is identical to the House version then it becomes law when passed by the Senate. If it is even slightly different then the two versions of the bill must be reconciled in a joint House-Senate conference and the final version sent back to both the House and Senate for another vote. So far no such bill has been introduced in the Senate, so absolutely no change was made Thursday. This is simple high school government class stuff, folks, which I confirmed today with Rep. Billy Tauzin's legislative aide.

Message-ID: <19980306072500.CAA21089@ladder03.news.aol.com>
Source record: 167999

All,

FYI, the 16-page committee report attached to H.R. 2369 gives guidance to the FCC and Justice Department. The report says, in part:

"Because the Committee preserved the Chapter 119 exceptions in its amendment of Section 705(a) of the Communications Act, the Committee does not intend for the Commission or any other enforcement agency to investigate or fine parties for the interceptions authorized by Chapter 119. Therefore, the Committee does not intend for the uses of scanning receivers and receiving radios such as shortwave radios, that are consistent with the Section 2111(g) exceptions to be investigated or fined under Section 705(a).
"Section 2511(g) provides a number of broad exemptions for the interception by private parties of radiocommunications, including those that are transmitted over a) a system configured for ready access by the general public; b) by any station for the use of the general public, or that relates to ships, aircraft, vehicles or persons in distress; c) any governmental, law enforcement, civil defense, private land mobile, or public safety communications system that is readily accessible to the general public; d) by any station operating in the amateur, citizens band (CB); and e) by any marine or aeronautical communications system."

It seems to me that they've gone a long way toward protecting our interests while attempting to assure that some future scanner isn't built that will receive and decode digital PCS communications (which is what this whole this is really about).

Sharon-

You OBVIOUSLY do NOT know what you are talking about. :(

First, you are using "double negatives". A "forged" "cancel"
is therefore NOTHING!

Second, a newsgroup cancel would have to be presented to
a NEWS (nntp) server, not a POP (incoming mail) server as
YOU INDICATE BELOW!

Third, is has been demonstrated that a couple of MY messages were
canceled too so you point is MEANINGLESS!

Dern good thing you didn't get down and
small that sucker's fetid breath! I've
seen 'im breathe on small trees and you
know what? The trees wilted in minutes.

I'm pretty sure he's a one-man logging
company up there in Oregon. That, or a
weed eradicator.

If I had a dog that looked like Mackey,
I'd shave his arse and teach 'im to
walk backwards when folks were around.

BTW, that damned idiot is trying to forge
cancel-posts now....and make it look like
me who's doing it.

Trouble is....the fool has already come to
the attention of NET.ABUSE where it's known
how to get to the bottom of crap like he's
pulling.

You need only a silicon switching diode, preferably
of the SMT 0805 style, but the standard axial
leaded 1N4148 or 1N914 will work fine so long as
you bend the leads tight and tuck 'em in closely
so as to make it small.

What proof do you have of this?

> You never "expained" anything. You did start the lie about not having
> a real internet address to cover up your theft of services.

There was NO theft of services! If there was, prove it!

I did NOT lie about NOT having a real internet address, I really
did not have one AT THAT TIME.

> > Eventually, we did get access to a mail server & then I started using
> > an internet address
>
> You got caught stealing access and had to find another way onto the net.

NO, read it again. Here, I'll write it again incase you have trouble.
Get ready, now pay attention:
> > Eventually, we did get access to a mail server & then I started using
> > an internet address

> You stole access to the net and HAD to use phony addresses to hide
> your thefts and illegal access.

No my work was providing me access to the internet for FREE, it was
a part of my job to stay active on the internet for testing
purposes. (You're just JEALOUS! hehehehehe)

> > I never gave any fraudulent address.
>
> Your admittance at using the phony addresses contradicts your statement.
> You're still a liar and a fraud.

I said it was "BOGUS", it was not "fraudulent". If you don't understand
the difference between those words let me know & I will post
definitions.

> True, you had to hide your theft of services and your ego forced you
> to brag about it by flaunting your name and callsign.

Sorry, there was no theft of services. You are just JEALOUS
that I was getting PAID to be on the internet!

> I've never publicly or privately proclamed Bill Cheek a hero.

Your actions say it!

> Let's see, you admit to theft of services after I confronted you with
> the evidence. You admit to using fraudulent addresses as well.

Really! Where/when did I admit to using fraudulent addresses &
theft of services? Please post your proof that I admitted (or even
did) these things.

Calling up the cellular provider is one thing. Call the cops and confessing to know the location of a cell tower and see what they do. See if you just don't get hung up on.

Of course if you call the cellular provider they're going to look into it. They don't want "electronic stalkers" finding out where their 200 foot towers are! They have them camo'd well enough that I can't see any of them. You show me the law and the wording of the law where it is illegal to map a cell system and I'll believe it.

Someone wrote me once and said a fast switching doide would do the trick.

Try a 1N4148. (axial lead component) (Rat Shack doesn't have surface mount)

If you ask the sales idiots for a surface mount part, They're likely to give
you a computer mouse, so you'd better find it yourself.

Yes. Hardwired telephones. Major difference. Once you transmit a signal into
the airwaves, it can and will be monitored by others. If you want privacy, use
a landline. Or, at least spend the extra few dollars to encrypt your signal.

Actually, it needs to be signed by the President first... unless it
receives the nearly unanimous support in the Senate which it received
in the House. If that is the case, then a Presidential veto would be
easily overridden.

You are correct - most "professional" users don't listen to many channels. I use it like a scanner mostly since it is less susceptible to intermod and it has CTCSS.

However, this still seems like a step back from what the Syntor X9000's will do. They have 64 modes and one can scan any or all modes. But the max. freq. separation is poor.

An what's up with the Spectra's programming software? This stuff is brain-dead. Takes hours to program (multiple screens per mode? - argh!). It is somewhat improved over the Syntor, but it still cannot compare to that of the high-end Kenwoods which use a "spreadsheet" approach to freq, ctcss, names, etc.....

I will get off my soapbox now...thx for the reply. I hope all those looking for the Spectra will read this and be aware.

Don't know how I missed it. In his book, 'The Ultimate Scanner', Bill Cheek points out that the AK93C67F is a 256x16 bit chip.

Microchip makes a 93LC66BX that should work.

93 - Microwire
LC - Low power CMOS - Max Vcc - 7.0 VDC
66 - 4K
B - 16 bit registers
X - Rotated pinout - similar to the AKM device.

Think I deserve 'The fat finger/head award' for this week. The AKM part number was incorrect in my original message.

Cheers, Paul

It would appear that you are the one that does not understand
what you are talking about. It was pretty STUPID on your
part to have issued a series of Rogue Cancels from the same
dial-in POP (located in Portland, OR) that you you just
used to post a series of your own articles.
>
> First, you are using "double negatives". A "forged" "cancel"
> is therefore NOTHING!

You issued a series a Rogue Cancels on Mr Cheek's and
Mr Kendrick's articles.

>
> Second, a newsgroup cancel would have to be presented to
> a NEWS (nntp) server, not a POP (incoming mail) server as
> YOU INDICATE BELOW!

The Rogue Cancels came from Sprint Net NNTP Server. The term
POP also stands for "Point of Presence". In this case the
"Point of Presence" was located in Portland, OR

>
> Third, is has been demonstrated that a couple of MY messages were
> canceled too so you point is MEANINGLESS!

You also posted some aritcles 5 minutes earlier from the same NNTP
posting Host!

NNTP-Posting-Host: 206.133.225.31

The NNTP-Posting-Host IP address resolves to:

sdn-ts-001orportP12.dialsprint.net.

Nice footwork but not good enough. It is an acceptable practice
for the *author* of a post to cancel it by posting a cancel. When
someone posts a cancel of said post by altering the header infor-
mation to make it *appear* that the author is canceling it, that is
known as a "forge-cancel" or "forged cancel."

>Second, a newsgroup cancel would have to be presented to
>a NEWS (nntp) server, not a POP (incoming mail) server as
>YOU INDICATE BELOW!

Bzzzzzzzzzzzzzzt! Wrong again. In this case POP=Point Of Presence
or a local dial-up number if you will. Not a POP (Post Office
Protocol) Server. Two different things but you knew that!

>Third, is has been demonstrated that a couple of MY messages were
>canceled too so you point is MEANINGLESS!

You could have cleverly cancelled your own posts to divert suspicion
from yourself.

>Sharon Hines wrote:

With me it's not the fact they don't want us to listen to cell phones, it's that the government is slowly limiting what we can and can't do. Also anything that's put in the airways and not encrypted should be fair game. I think US laws should be like the Canadian laws. Listen all you want but don't tell. Unfortunately, the ones with the power and influence don't see it
that way.

Second, cell phone companies should have been forced to inform customers that
their phone conversations could be intercepted. Many people don't realize that their phone is a radio. My mother-in-law now refuses to buy a cordless phone after I explained to her that she was broadcasting. I explained to her
that she should never use a cordless phone if she was concerned about someone else hearing and that was it.

That's just my opinion.

Leroy wrote in message <350030D5.4622A299@zebra.net>...

This particular flame war has been active for about two years now.
After Mackey got evicted from the fido forums, he migrated to the
internet to continue his harassment and electronic stalking of
Bill Cheek. Historically speaking, Mackey is a sore loser.

748. Need BC800XLT IF mod to RX 137 MHZ NOAA Satellites

Newsgroup: rec.radio.scanner
Date: 1998-03-06 00:00:00 UTC
From: gwod <gwod@primenet.com>
Message-ID: <6dqcf4$3sb@nntp02.primenet.com>
Source record: 168058

Does anyone have information on modifying the IF of a BC800XLT?
I want to widen the IF from narrow band FM (15 khz) to at least 35-45 khz
to receive weather satellite fax image transmissions. This requires a wide
IF not found in most scanners.

I am looking for either the schematic, repair manual and source of IF
crystal filters OR the name of some repair shop that can do the mod for a
reasonable price.

The 800xlt is double conversion with a 10.7 MHZ 1st IF and a 450 KHZ second
IF. The ARRL Weather Satellite Handbook suggests a "cheap" 30 MHZ crystal
filter with a wide skirt and bypassing the 2nd IF with a 5 -15 pf coupling
cap.

Please reply to my address below.

> other forum ops and at least 5 hub admins (A vote of confidence).

Not true! You just gave the info on how to START an echo, we are
talking about how to become the moderator of an existing one.

Obvioiusly, you don't know what you are talking about.

> You were run off of scannradio, amateur radio and a few others. I should
> know, I was there to whitness it...

Sorry, but you are lying again. I was kicked off of scanradio, but NO
OTHER
ECHO, PERIOD.

However, I do remember YOU receiving warnings about YOUR behavior on
fidonet.

> Lies are your department, HUMAN. You seem to be so replete with them of
> late (such as amditting to using "bogus e-mail addresses because you

I found this on the internet...I'm not electronically inclined enough
to expand on it.
But maybe someone else could and make it work. Read over it and see what
you think. It may be just a bunch of garbage.

Buzz

Repost from net:-------->overview: the pro2021 is a 200 channel
scanner, mode is implied by
frequency, missing the 220 ham band, 800+ cell fone/ISM band, the
170ish thru 380ish military? air band...
sold for about $200 from radio shack, first on special in 1986 time
frame.
bands which the cpu will honor may be excluded by the presence of
diodes near C151 (on silkscreen) top view, left end, rear.
in order from left starting with D44:
D44 - 'U2' - 810-960 MHz Mode: FM Step: 12.5 kHz (installed - cell
fone)
D?? - 'U1' - 380-512 MHz Mode: FM Step: 12.5 kHz
D?? - 'Hi' - 138-174 MHz Mode: FM Step: 5.0 kHz
D?? - 'Ar' - 108-136 MHz Mode: AM Step: 25.0 kHz
D45 - 'Mi' - 68- 88 MHz Mode: FM Step: 5.0 kHz (installed - TV
ch2-4)
D?? - 'Lo' - 30- 54 MHz Mode: FM Step: 5.0 kHz
After clipping D-44 the scanner will scan 810-960 MHz but will not
recieve.
Same for D-45
further: when the cpu selects a frequency, IC8 (a shift register) is
used to enable the rf front end for that band. IC8 is near center,
about 1.5 inches from front, thru-hole mounted on top. the outputs
of ic8 associated with D44 and D45 are not connected to anything.
R112 leads from pin 4 of ic8 to base of q10, and when the output
at pin 4 is active (low) enables VHF LO band reception.

Pin 5 of ic8 is active for "Mi" or "VHF-Mid" band recption.
another (10K) resistor may be connected from pin 5 to the rf-enable
end of r112. this will enable the lo/rf for 68-88.
this mod is incomplete, and any "scanner men" are invited to
enter this discussion.

Pin 13 is associated with the 810-960 MHz band, and similar
modification
of adding a 10K resistor from pin 13 to the rf end of r113 should
enable that rf front end.

note: search mode does not function with either of these mods, so
i'm probably missing something, but direct (manual) frequency entry
of the 2nd harmonic of the 440 MHz ham band coupled with the use of
a 440 HT who's 2nd harmonic is about 50 - 100 dB below carrier
result
in a full quieting signal at 5 watts at a distance of about 2 feet.

so: have we stimulated anyone who knows stuff about modifying scanners
to join in and help us 2021 owners out? If so, that would be
great.

btw: cycle the power after clipping diodes, the cpu seems to sample
the
diode array at power up only. Reset is not necessary.

Note: I haven't tried or verified this, proceed at your own risk.

On the schematic diagram in the PRo-26 Service Manual, I noticed that many of the CPU's pins were grounded or not connected to anything. Pins 4, 24-26, 65, 73-75, and 80-84 do not connect to any components. What is the purpose of these pins?

WRONG!

Truth:
Off & on for about 18 months (started July '96). It dies down
then either Richard Kendrick or Bill Cheek (sometimes under one
of their alias names) starts up all the CRAP AGAIN!

> After Mackey got evicted from the fido forums, he migrated to the
> internet to continue his harassment and electronic stalking of
> Bill Cheek.

WRONG!

Truth: MANY months after Cheek & I had a disagreement ending in my
leaving his fidonet echo, I came here only to find a MASSIVE
flame war with nearly everyone against Bill Cheek because of SEVERAL
things he did to cause problems in this forum. (Would you
like me to post some examples of people complaints of that time?)
I simply became part of the group to keep Cheek in line & out of
out hair on this NG.

> Historically speaking, Mackey is a sore loser.

WRONG!

Truth: Bill Cheek brings up the Fidonet problem, NOT ME! I believe
in NOT carrying grudges & getting on with life.

Hi,
Ii¿½m looking for audio recordings and any information (dates, freqs.,
durations, bandwidths, logs...) of woodpecker signals for a scientific
documentation.
Most of that happened a long time ago but maybe someone still has
recordings of those signals.
Please msg me.

Thanks
Karsten

776. FS: Post Tracker

Newsgroup: rec.radio.scanner
Date: 1998-03-06 00:00:00 UTC
From: James Kearman <jkearman@javanet.com>
Message-ID: <3500B16B.A7622FBB@javanet.com>
Source record: 168086

Please take a few minutes to read this posting before you delete it! Like you, I used to be confused by cancelled and forged postings. Was it John Mackey, IWStirn or Bill Cheek? Is Bill Cheek also John Mackey disguised as IW Stirn? Is Bill Cheek really Big Foot?

Why did I care? Because I live in an area so far from "civilization" that the local police don't even have trunked systems. They just use one frequency. How boring! No need to buy a new scanner. There was more excitement on the local McDonald's drive-through frequency than on the police bands.

Then I discovered "Post Tracker." Post Tracker (patent pending) identifies the _real_ sender of every email and newsgroup posting you read. Nevermore will I read a posting from "nobody@nowhere.com" or iwstirn@bigfoot.com and wonder "who the $%&* is that guy???" Now I know, and you can too!

Yes, I know, you've been offered panaceas before, but just think about this: No more unfocused rage at these children wasting bandwidth on your favorite newsgroups! Now you'll know who to hate! Folks, this is the best invention to hit scanning since the squelch control.

For a limited time only, you can own a first generation Post Tracker of your very own. See our webpage at www.posttracker.com for details. Don't wait, get yours now while supplies last.

I am currently using the Austin Spectra. Works like a champ.
Have it mounted on a motorola mount on the rear fender.
Using my Yupiteru MVT-7100 I hear everything, it even does a good job on shortwave.

There are no scanners on the market that can follow EF Johnson LTR
trunking. What you can do is either purchase a CSI LT-2 LTR decoder or
an Optoelectronics DC442 plus (which has LTR decoding). Both units can
output all trunking data to the serial port. Then write software to
read the data from the port and automatically change the frequency of
a computer-controlled scanner. A programmer with a little knowledge
about how LTR trunking works plus who knows the ICOM/Optoelectronics
CI-V commands would be able to write a program easily.

Source record: 168095

1994 Radio Shack Pro-43 Scanner w/ full 800Mhz restored.
Includes Nicad Batteries, A/C Adapter/Charger, Rubber Antenna, & Manual.

Selling because I no longer have time to listen to it much, and my
interests have changed.

This unit is fully functional with one exception, which you will notice
as soon as you turn it on.. The speaker is partially blown, and sounds
distorted at anything but the lowest volume levels. You can order Radio
Shack part EAS-3P127 and replace it yourself, if you are handy, or you
can use the RS clip-on lapel speaker I'm including, which works just
fine plugged into the headphone jack. Just don't take it to RS for
repair, as I believe they will "un-restore" the cell freqs.

$180 firm, includes insured shipping within CONUS. E-mail if interested
(remove spamsucks from the address).

John Aydelotte

Adolf Hitler / Joseph Stalin would be proud of this country. Without SW radios, we would have to "depend" on the Media Elite such as ABC,CBS, NBC, CNN for our news. Since the foreign media like the BBC tells us what is really going on with the Clintons and telling it like it is. Might as well call the Media Elite by their true name, "Pravada" or state radio & TV since they are in such cahoots with the gov't people.

If you think that you have freedom of speech in the US, think again. Hear of the term, "Political Correctness" ? It is permeating corporate Amerika. I worked for a company that was known to break up Ma Bell and they are hell bent on political correctness. I mentioned that I am an NRA member and I got the 3rd degree for that. I mentioned that I enjoyed scanning and also got the 3rd degree as well. I had an anti-Clinton calendar and I was told to take it down.

Think of how our society is turning for the worst. No one cares for the US Constitution.
Our polically correct school system will not teach items like the Bill of Rights,

but will teach that we are not to question the rules, just go along to get along. They will not teach the children to think but to follow without complaint or question.

Why did Hitler get away with exterminating millions of people ? No one would dare question why things were going on that were not right.

Well, off my soap box while it is still there.....

I just purchased the M-200. Not too bad. However, I find that the
selectivity is
very poor. Local 155.535 Sheriff Repeater comes in on 155.490, another local
channel. Have also found problems with FM Broadcast stations being demodulated

on various high band frequencies. Some birdies too. One is on 155.750 another

local channel used in my area.

The sensitivity is excellent! Birdies fair. Selectivity not so good!

Just back from a trip to Tokyo and thought the following might be of interest. At Akihabara I picked up a ICOM PCR-1000, going price there is $320. Also, bought the UT-106 DSP board $61. R-10's selling there for $240. Nice to have a little strength in the Dollar vs the Japanese Yen!
If you get a chance to go there you should also pick up a copy of the1998 Receiver Modification Bible. This is a book that covers all the mods on just about every available radio. Text is in Japanes but it is mostly pictures and diagrams and you can pretty much figure things out. The book will cost you about $9.50. Tony N2SS

All,

I'd like to correct myself. The above was written before I had seen a copy of the committee report attached to H.R. 2369. At the time I believed that I had a legitimate concern. However, the report makes it clear as to the intent of the legislation. It reads, in part:

"...Section 2511(g) provides a number of broad exemptions for the interception by private parties of radiocommunications, including those that are transmitted over a) a system configured for ready access by the general public; b) by any station for the use of the general public, or that relates to ships, aircraft, vehicles or persons in distress; c) any governmental, law enforcement, civil defense, private land mobile, or public safety communications system that is readily accessible to the general public; d) by any station operating in the amateur, citizens band (CB); and e) by any marine or aeronautical communications system.
"Because the Committee preserved the Chapter 119 exceptions in its amendment of Section 705(a) of the Communications Act, the Committee does not intend for the Commission or any other enforcement agency to investigate or fine parties for the interceptions authorized by Chapter 119. Therefore, the Committee does not intend for the uses of scanning receivers and receiving radios such as shortwave radios,
that are consistent with the Section 2111(g) exceptions to be investigated
or fined under Section 705(a)."

This makes it clear that Congress is not trying to ban the use of shortwave radios. Although not all shortwave communications may be covered by the listed exemptions, the vast majority of communications that most SWLs are interested in are covered.

John

There wasn't much of a cell phone industry lobby up here, the reason is pretty simple. Ban them in the USA, and Canada gets the trickle down theory, RatShack doesn't sell cell capable scanners up here, they sell the USA market version. Yes if you look you can find Icom, Uniden Bearcat scanners, but again only at a small number of "Ham" dealers.

There have been rumours since the USA passed the ECPA in 1986, that the Parliament of Canada would pass similar laws, but to date no bills have been introduced. Pre-occupation over Quebec I suppose... Scanners are a pretty low priority up here...

Not that I'm against it, but is the ability to listen to people on cell phones all that important? I've listened to them on scanners, before it became illegal to make scanners that covered these ranges and also heard them on "ghost" frequencies. I've never heard anything good enough to really get me into the whole "cell" thing. What gets everybody so fired up about this whole cell thing.
Even if the federal government outlaws cell conversions, there will still be ways to intercept. I mean they are not going to outlaw frequency doublers and all other sorts of ways to convert the signal. So why get so upset. The best thing the federal government could do is force all cell providers to switch to digital transmissions, this would solve the interception problem for a while, and also with compression it could free up a lot of valuable bandwidth for more interesting things. This is just my opinion, I'm curious to see what the rest of you think. Opinions are wonderful things; never take mine; form your own.

You can also substitute a 1N4148 fast switching diode instead of
waiting for the surface mount diodes to come in. If you are doing the
shortwave modification, then it is best to use the 1N4148 diode which
enables to you bridge the span of space needed.

Source record: 168130
Cross-posted to: alt.radio.scanner,rec.ham-radio,rec.radio.amateur.homebrew,rec.radio.scanner

Spectra radios allow several different types of scanning.First, of course, each frequency needs
to be loaded into a mode location. You then have the following options: operator or mode slaved
scanning. If you set up for operator scanning, you only get sixteen scanable frequencies. If you
set up for mode slaved scanning, EACH MODE gets a different group of 16 scannable frequencies.
Ditto for zones. The A7 and A9 seem to use the same firmware, and vary in power, features,
and control head. Unless you are doing your own programming, which requires a RadioInterfaceBox,
the Spectra.com program from motorola, etc.., using this wonderfully complex two-way as a scanner
is.....well, it's not very....appropriate. Buy a scanner.
sorry. John

I think that 4a4 is the first date code with the epoxy over the diode
that must be removed. (D10 or something). However, it is quite
possible the the epoxy treatment was started somewhere within the 3a4
production year. Not much help, huh?

820. FreeTracker: Computer program for BC895 has been released!

Newsgroup: rec.radio.scanner
Date: 1998-03-06 00:00:00 UTC
From: no.spam@for.me
Message-ID: <B922A13E6DCD20A3.1E6A6FA1EB663EB1.0B3ED16AF051834C@library-proxy.airnews.net>
Source record: 168133
Cross-posted to: alt.radio.scanner,rec.radio.scanner

FreeTracker Beta 2 is ready for download!
http://www.webcom.com/autownet/freetrack.html

FreeTracker is a computer program dedicated to the BC895 TrunkTracking scanner.

* Supports up to 5,000 "Virtual Channels" which are like the radio's normal
channels, but add Callsign, Description, Color (for activity log), Alarm,
location, hit count, and more.
VChannels can be scanned (20 chan per second) for activity, or stored into your BC895

* Descriptions - You can store Descriptions, Callsigns, and Locations for
frequencies and Trunk Talkgroups/ID's. When that freq/talkgroup appears,
a description is shown, along with Callsign, City/State, etc

* Alarms - A Wav file can be assigned (or speaker beep) to certain
freq/talkgroups, a Bitmap, or a .RTF file that pops up while that freq/group is
active. For example, have all local police codes shown when a certain
police channel comes alive. I just added some Cool bitmaps that
appear with local police and fire stations

* Colorful charts and graphs show you what frequencies/talkgroups are most active

* Powerful script language lets you create your own scripts, then schedule
them for when you're away, or when a certain event happens on your scanner

* PerCon database lookups from their web page (stored as html) can be
imported. Also imports from Grove, Probe, and PerCon Dbf files!
Drag and Drop channel editing - throw any database entry to a channel, or vice versa.
If that frequency is already assigned, it zooms to the channel # to avoid a
duplication

* Activity Report is color coded - you can assign any color to any specific
freq/talkgroup, plus bolded text

* Search Ranges - you can store up to 2,000 search ranges, then
double-click them to activate an immediate search of that frequency range

* All BC895 keys are supported, allowing a virtual radio on your desktop

* FreeTracker can be minimized as a TrayIcon, with a feature-rich right-click
menu for easy access to popular functions

* Database-editing in a simple grid. Click the record you want, and
change any value. Menu allows selecting any record to zoom to that frequency.

* Communicate with your radio interactively - type any command in, and
see the response.

* Power users can utilize the quick-command box. Simply key in a command
word to change frequencies, channels, scan, hold, search, manual, etc.

Example Syntax:
f15189 tunes radio into frequency 151.890
c56 takes scanner to channel 56
Up arrow emulates SCAN key
Down arrow = Manual
Right arrow = Search
Left arrow = Hold
... plus about 50 more powerful commands

* Export all scanner channels/freqs to a text file or Dbase, then import back into
the scanner at a later date.

* Complete logging to a file, or printing just about anything.

* Export your VChannel/talkgroup database to a HTML file for posting
on your favorite web page.

* Multiple copies can be run for multiple BC895 scanners

Mr Mackey,

I suggest that you read the Cancel Messages: Frequently
Asked Questions which is currently available at the
following URL:

http://www.math.uiuc.edu/~tskirvin/faqs/cancel.html

I also suggest that you pay CLOSE attention to the section
title "V. That idiot forge-cancelled my posts!" which is
available at the following URL:

http://www.math.uiuc.edu/~tskirvin/faqs/cancel.html#V.

I think it's pretty obvious to everyone in the group that
the Rogue Cancels in rec|alt.radio.scanner originated
from the SprintNet POP located in Portland, OR. It has
also been pointed out that YOU posted an article five
minutes earlier from from the same NNTP posting host prior
to Cancelling the articles of other users in the group!

By the way, POP also stands for "Point of Presence". It
would appear that you are the one that does not understand
what you are talking about. It was pretty STUPID on your
part to have issued a series of Rogue Cancels from the same
dial-in POP (located in Portland, OR) that you you just
used to post a series of your own articles.
```

>thanks, jim

You talking about a HAM radio? 2 meter maybe? If so, yes you need a license, even if it's for an emergency. Radio shack and other ham radio stores sell a book called "Now your talking" which you can use to study and get your technician class ham license. It's not that hard to do and a heck of a lot of fun too!

Good luck,
Tom

All pro-46's are mod-able although differently. you need to get a copy of Radio Tech Modifications (about 20-25 dollars delivered) which has most of the scanner mods & diagrams including the versions of the pro-46.

>list....major problem.

Not really a problem for the target users of the radio. You must remember that this unit was not designed to be used as a scanner, but rather as a working 2 -way radio. In such a use, there is little need to scan more than just a few channels. Most of the officers on our police department rarely program more that three or four channels into their radios. We set them up here with the selected channel as the priority 1 scan and the Primary Dispatch channel as the priority 2 scan. The individual user may then program others as needed.

My point is, however, that we need to be vigilant, to watch for the
senate version of the bill to be floated, to lean hard on our respective
senators and to keep our fingers crossed that the major flaws (ie,
the restrictions effecting SWL utes and the like) get hammered out
in committee. With all potential laws, we get two chances to get it
right - all we really need is to convince a voting majority in the
senate to turn thumbs down to the analogous bill, or barring that
to convince the members of the committee that there are still
serious flaws that shouldn't appear in the final law...

Have any readers utilized a Motorola JT1000
as a scanner? Also similarly Motorola
MT2000 series Models I and III?
What about Kenwood?
Am interested as to long term durability,
audio output, available accessories.
I am not a ham radio operator so
am unable to enquire of that group of people.
Can somebody advise as to cost, either
new or preferably used.
Have found the Uniden & Radio Shack
products to be short-lived in terms of durability.
The scanner would be used primarily for railfan
use; monitoring of cellphones and police calls
is not of interest.

The ra

$5 dollar minimum bid

Realistic Pro-37 200 Channel Handheld Scanner. I have
complete operating intructions but not the original owners
manual. Comes with AC adapter, this will run the scanner
as well as recharge the batteries. Scanner is in perfect working
order but has some scratches and dings on the case.
Warning, previous owner made modifications to recieve Cell Phone.

PRO-37 Programmable Scanner
HyperScan -
lets you search through frequencies at up to
50 steps per second or scan stored channels
at 25 channels/second.
Ten Channel-Storage Banks -
lets you group your stored frequencies so that
you can easily identify calls.
Liquid-Crystal Display -
shows the selected channel and frequency.
Two-Second Scan Delay -
helps prevent the loss of replies on a channel
while you are scanning.
Memory Backup -
keeps the channel frequencies stored in your
scanner's memory for up to 1 hour without the
battery.
Lockout Function -
makes your scanner skip over specified channels.
Priority Channel -
helps keep you from missing important calls
on the selected priority channel.
Monitor Banks - lets you save up to ten channels located
during a frequency search.
Covers these Bands
30-50 MHz (VHF Lo)
50-54 MHz (6-Meter Ham Band)
108-136.975 MHz (Aircraft)
137-144 MHz Government)
144-148 MHz (2-Meter Ham Band)
148-174 MHz (VHF Hi)
380-450 MHz (Ham Radio and Government)
450-470 MHz (UHF Lo)
470-512 MHz (UHF TV)
806-823.9375 MHz (UHF Hi)
851.1125-868.9375 MHz (UHF Hi)

896.1125-960 MHz (UHF Hi)

I agree completely. The tax situation in this country is terrible. No doubt about it. The so-called "conservative" Republican Congress we elected in 1994 and again in 1996 to solve this problem is a joke. They cave in to Clinton and the Democrats at every turn. My point was only that the situation is even WORSE in Canada. They have confiscatory-level income taxes PLUS high provincial sales taxes PLUS a nationwide (GST) sales tax of 7%. Sky-high levies on gasoline, liquor, tobacco, and everything else. Not to worry, though; within a few years, the U.S. will be right up there with them.

Barry,

How old is the FT=3000? Who makes it? And where is it available? Why don't
you pass on my Virtual banking system message to the FT-3000 manufacturer
and see what they think.

Scanners today commonly have 200-400-1000 freq storage but still
shoehorned into 10 banks. [sigh]

Thanks for your reply and, take it easy,

Andy Burns

And we in Canada will still be worse than the US...

ie for Canadians to purchase $1.00 US funds, to costs us in
Canada $1.40 in our funds, that is exchange rate plus bank
charges...then as noted there is the federal goods and services
tax (GST) which is added on to an already high provincial tax.
No provincial tax in the province of Alberta, everywhere else
though. Ontario it is 7% GST, 8% provincial tax. Total 15%!
Gasoline is 53 a liter, and since the uS is non-metric, try 53
cents a quart, again in Ontario. A lot of provinces are much much
higher.

>>
>> Can you mod a pro 39 with the date code of 3a4 .. like to know

Like the rest have said, not much known until someone who actually has or had one with that date code answers this.
I have been collecting mod info for years. I looked in mine for the Pro-39 and found a note on one page that said 2A4 may be the last date code. I know that 2A4 is the last date code for a PRO-43 mod but other sheets I have for the Pro-39 have no special notes. Sometimes you just have to take the chance, buy it and try it, type chance.
I did that with a BC700A they said could not be modded. I bought it then did the mod that was not suppose to happen on that date code.
Noobody@aol.com
Happy Scanning...

Want to be a Ham Radio Operator?

Now you can get an Amateur Radio license without learning the Morse code.
First, you need to study the FCC Rules that apply to Novices and Technicians, some antenna theory, and electronics theory. Next, you take a 30 question multiple choice test and a 25 question multiple choice test. You can buy a book with all the questions and answers in it at Ham Radio Outlet or any Radio Shack store ..and start studying.
If the Morse code does not scare you, you can get beginning code practice tapes with your study material and start with the Novice license which requires ability to copy code at 5-words per minute.
A Novice gets more HF privileges (longer distances) and a codeless Technician gets more VHF and UHF privileges. If you add the code at 5-words per minute to the Technician license, you get all of the Novice and Technician privileges.
PARC (Palomar Amateur Radio Club San Diego)annually conducts licensing and upgrade classes beginning in late spring and continuing through the summer. Classes meet one evening
per week and carry the student from Novice through the Advanced class license.
If you are interested in computers, you can access bulletin boards and contact other computers via packet radio. Technicians can also get involved with Amateur TV, microwave transmission, satellites, earth-moon transmissions, community service, transmitter hunts, and use mobile UHF and VHF radios.

Check out our home page at: http://www.electriciti.com/parc

I would like to boost the signal to my scanner. I have a cheap RS 30-1000mhz antenna trunk mounted to feed my pro 2046. I have seen many broad band amplifiers, but really need only the 800 band (everything else comes in good, the local Erickson system is awful) other than getting a cellular antenna, I can think of no other way of improving the signal (I use low loss cable) the trunking system has towers all around me, all within 5 miles, but half of all signals are weak

JSPRINE (jsprine@aol.com) wrote:
: Anyone have any information, comments, or gripes/praise about the new Relm MS
: 200?

I've had my MS 200 for almost two weeks now. Here are some comments:

Nice looking radio. I like the simple appearance and function. The case
is plastic but fits together nice and feels sturdy. The display and
keypad are lit all the time by LEDs. Very nice, though the keypad could
be more consistently lit.

It comes with everything you need for a base or mobile installation
including back-of-set whip, AC adapter, mobile bracket, DC cable.

The radio is made in USA! The AC adapter is made in China. Can't win 'em
all I guess.

The user interface is fantastic and very easy to use. I have found a few
bugs in it but they are not too annoying. I especially like the frequency
entry. I also like the channel selector knob. It's a feature I'm used to
seeing only on HTs. As far as the alphanumeric display is concerned, why
did they use a Union Jack type LCD instead of dot-matrix character which
would have been easier to read? Alphanumeric is a step in the right
direction though. Now that I've used it, I don't know how I lived without
it.

The MS 200 is quite sensitive using only the included antenna. In fact
it's all you really need if you're in a crowded area like Eastern
Massachusetts where the VHF High and UHF bands are really crowded.

The MS 200 has a weather alert feature that detects the NOAA weather alert
tone to break the squelch. Unfortunately you must be in WX search for
this mode to work. It would be better if you could include the WX channel
in your normal scanning and tone squelch the alert tone that way.

I am having a horrible time with internally generated signals and mixing
products. I originally purchased this radio to use in my car, but I found
that 800 MHz was impossible to hear because of an intolerable number of
cellular phone images. Since I must listen to the trunked Massachusetts
State Police system, I had to put my old scanner back in my car.

I am using the MS 200 as a base unit instead. It behaves much better in
the home. However I am having a problem with the back-of-set antenna
receiving interference from the radio itself. I had originally thought
that the interference was from a CD player or computer because it
disappeared when I removed the antenna from the MS 200. I found however
that my other scanners couldn't hear the interference unless placed near

the MS 200.

Someone else here mentioned that they had a later version with significatly reduced images and internal interference. What is your unit's S/N? My S/N is 808-A0003214. I purchased it less than two weeks ago.

Overall a nice radio with great user features, but has a lot of interference problems, so many I couldn't use mine mobile. It makes a great base scanner though.

Does anyone have any info on what the North Carolina HP is using
800 mhz for? They are still dispatching on low band and using
their high band for talk around etc. But I keep hearing them
refer to "800 system now 10-8". Are they using the local 800 system,
Charlotte-Mecklenburg, or do they have their own? Is it for sensitive
communication they don't want on the regular channels? I don't know. If
anyone has any accurate information, please e-mail me, jcleve@ibm.net.

Thanks

Jon C.

Could this bill still mean that when we buy future SW receivers, there will be certain frequencies deleted out on them like on scanners today ? Right now, you could buy a SW receiver that covers from 1.6 MHz (end of AM Band) all the way up to 30 MHz but some freq's be cut out later like 10 MHz to 11 MHz for example ?

Source record: 167829

First off it isn't a law until both houses pass it and the president

signs it, or both houses of the congress votes to over ride a veto.

that hasn't happened.

Secondly....

We as a group need to show concrete examples why having a

scanner benefits the american public. We also need to express to our

elected representatives that they shouldn't outlaw the owning of this piece of equipment but punish the improper, illegal use of it.

thirdly....

we need to be as self policing as the ametures are. Let folks know what the laws are that govern out hobby and possibly turn in the worse offenders. If a couple of people got a notice of financial liability from the FCC then some folks would stop passingo n what they heard on a cell phone signal. Point our fellows user to the 1934 communications act, and the others that amend it. Request that scanner manufactures with their documentation put a copy of the law in with their instructions. They have as much to loose by having it become illegal to own these devices. In other words we need to be part of the solution.

In other words my fellow wire heads, communications specialists, radio

junkies, and all the other folks who listen to ham radio, police and

fire calls, and what have you, could we be part of the problem. So now we got to find a way to be part of the solution that sounds less like we

are members of the far right, or the far left, and that we are

reasonable, citizens who think things out rather just reacting because

some bought and paid for congressman has proposed a bill and has

convinced others that he is right.

So what we need to do is very calmly, and in an organized manner write

letters, not form letters that we copy from the net/web, not reactionary letters, but well thought out letters that are copied not just to our state senators, but to the FCC, and the other 98 senators in the senate. We need to copyt hese same letters to the president, and to the news media.

We need to show how a scanner has been used in a responsible manner with narratives and stories from common citizens, police officers, search and rescue volunteers, ham radio operators, and others who use their scanners to aid the citizens of thier states in the prevention or mitigation of the loss of life and property. Stories of how a citizen was able to help a pollice office arrest and bring to justice a drunk driver. Or how when you as the writer of the letter heard about the search for a lost child and was able to spot her and help return her to her parents by using the information heard on the scanner. But these can't be just yeah I heard of this happening. It's got to be from you the writter, even if its just passing something along you have to be able to document it with name, dates, incidents reported and what really went on. Something that can be back checked. Other wise we still are part of the problem. In all the conversations, and postings I heard on this bill no one mentioned this!

Okay I'll get off my soap box. The only good news about this is that the senate wont be taking it up right away. I am not even certain as of this time if it's been sponsored in the senate and is on the calendar for debate and voting.

Regards,

Bill Carty

888. Oregon State Police air-ground freq found !!!

Source record: 167830

Traveling down I-5 around Roseburg (south of Eugene) I found the OSP issuing speeding citations using a fixed-wing plane and 3 ground units. They were using 155.475, the NLMARS frequency.The plane would fly north for a mile or so, then radio down when the speeder was passing the unit. Then the plane would fly south and monitor the southbound traffic. On that day, they were around milepost # 148 around the truck stop and rest area. My question to the locals is what other frequencies does OSP use for air-to-ground speed enforcement ?? They also seem be fond of hiding in the center divider (w/ radar) south of Eugene, around Cottage Grove.

-John "I'm proud to be Richard Simmonds boy toy" Mackey- KA0SSF
tried to hide his illegal activity with circuitous rantings:

You claimed:

> About 18 months ago I was in a work situation where I had internet
> (T1) access but NO internet address.

I say you lied. You had no valid internet address because you stole
access, and therefore had to obscure your illegal activity. But, your
employer was smarter than you, and they caught you. Your refusal to
precisely identify the employer and the work situation reinforces the
fact that you lied about the whole thing. This is just another one of
your prozac induced delusions.

> There was NO theft of services! If there was, prove it!

> I did NOT lie about NOT having a real internet address, I really
> did not have one AT THAT TIME.

Possessing and using a valid internet address is not theft of services.
Not having a valid internet address, gaining (illegal) access to
someone else's access, and using non valid addresses to cover up your
activities *is* theft of services. You admit using a non valid address
in a dubious situation. Therefore, translated from the convoluted
language of Toilet Boy, you lied, you are guilty of theft of services.
Now you can add thief to your list of infamous accomplishments. You
know, that's the one that includes liar, fraud, fool, and moron.

> NO, read it again. Here, I'll write it again incase you have trouble.
> Get ready, now pay attention:
> > > Eventually, we did get access to a mail server & then I started
> > > using an internet address

I have no trouble discerning that you are trying very hard *not* to
admit you got caught and had to find another method of internet access.
Poor Toilet Boy, you hate it when I see the transparency of your lies.
Especially when I point out that you're demonstrating that your prozac
and preparation-h abuse induces denial and general stupidity.

> No my work was providing me access to the internet for FREE, it was
> a part of my job to stay active on the internet for testing
> purposes. (You're just JEALOUS! hehehehehe)

Stealing access to the internet is usually free, that is until you get
caught as you did. As far as testing of any type goes, you couldn't test

a flashlight for proper operation, let alone anything related to a T1 connection. If you think I'm jealous of you, you're even stupider than you look. At the most, you provide amusement at just how inane and moronic you can be.

> > I never gave any fraudulent address.
> I said it was "BOGUS", it was not "fraudulent". If you don't
> understand the difference between those words let me know & I
> will post definitions.

Ah, so you DO want to ride the elliptical ferris wheel regarding the definition of bogus and fraudulent. I thought you might like to take that ride. So, I'll save you the trouble, Toilet Boy. My dictionary shows the following definitions for bogus and fraudulent:

bogus - hoax, hypocrisy, an imitation or counterfeit purporting to be genuine, an act intentionally committed to give a false impression, a trick that deludes, imposture, John Mackey or anything said by John Mackey

fraudulent - deceit, intentional perversion of the truth to deceive or misrepresent someone or something, one who is not what he pretends to be, John Mackey or anything said by John Mackey

Now applying those definitions to you and this particular lie of yours leads one to the following conclusions.

You are a fraud, liar, and thief. You have every intentions of playing out those traits to anyone who's attention you can garner.

> Sorry, there was no theft of services. You are just JEALOUS
> that I was getting PAID to be on the internet!

You used multiple phony addresses with rapidly changing of access points to the internet. ISPs are smarter than you think, Toilet Boy. They kept catching your illegal access and cutting you off as fast as you could break in somewhere else. No matter how you attempt to evade the issue, it's still theft of services. See above regarding jealousy.

> > I've never publicly or privately proclamed Bill Cheek a hero.
> Your actions say it!

By my actions and my words, I say you're a fraud, liar, and thief. In your mind, and I use the term *very* loosely, the world is divided into two segments: Those that are gullible enough to believe your lies, and those who don't. As you've shown so many times already, anyone who doesn't buy into the evangelical ramblings of John Mackey is a Bill Cheek fan.

You can't stand it that I see right through your sniveling, your twitty rantings, and your lies. You can't stand it that I openly proclaim what a fraud and a liar you are. That squarely puts me in the camp that doesn't buy into your stupidities. In your delusional mind, anyone in

that camp is someone who thinks Bill Cheek is a hero.

You overlook the fact that there are a lot of people who have no clue who Bill Cheek is, and therefore don't know if he is a hero or not. But, they know you are a liar and a fraud. If a person doesn't know of Bill Cheek, but they know you're a liar and a fraud, does that make them think Bill Cheek is a hero?

Hmmm, I don't smoke but my roommate does! Cigarettes are only $4.00CDN
(or under $3.00 US) per pack. Ontario Sales Tax is 7% plus the Federal
GST of 8% (total 15%) but this changes inevery Province, Alberta has no
Provincial Sales Tax. Beer is close to $30 for a 24, but it's Canadian
Beer not USA water!!! Scanners with full coverage do exist, but are not
sold by Radio Shack, Uniden, Icom etc are harder to find, you have to
find a Ham Store. Funny Thing some folks up here buy them from USA mail
order stores because it is not against the ECPA to export cell scanners...
For more Ottawa area scanner info: http://www.achilles.net/~dhoisak

As usual, you lie again, Toilet Boy. You came onto the internet in March 1996 starting your nonsense. At that time you were using the address John.Mackey_Jr@p234.f40.n105.z1.fidonet.org.

Knowing you have very poor mathematical skills, my arithmetic shows that to be about 24 months.

> It dies down then either Richard Kendrick or Bill Cheek (sometimes
> under one of their alias names) starts up all the CRAP AGAIN!

The scanner groups quiet down when you lay low for a while after you get your sorry derriere soundly trounced with the truth. You wait and then come back like nothing has happened and start up again.

> > After Mackey got evicted from the fido forums, he migrated to the

I'd say 24 months of attacking anything Bill Cheek says is continued harassment and electronic stalking.

> Truth: MANY months after Cheek & I had a disagreement ending in my

Yeah, a group of one. The only person that has been completely out of line is YOU. I've tried to tell you many times, Toilet Boy, watch your doses of prozac. You're starting to believe the hallucinations again.

> > Historically speaking, Mackey is a sore loser.
>
> WRONG!

Your behavior over the last two years proves YOU wrong, Toilet Boy.

> Truth: Bill Cheek brings up the Fidonet problem, NOT ME! I believe
> in NOT carrying grudges & getting on with life.

Two years of stalking and harassment in not carrying a grudge? You
really
are delusional, Toilet Boy. You have to have a life first before you can
get on with one. If you had a life, you wouldn't be here attempting to
cause so much mayhem.

RCR News reported the house measure passing. They also pointed out that the Senate already has a "Senate Version" that is so close to the house version that it will "no doubt be brought to the Senate without benefit of a joint house/senate committee to work out differences." And Clinton is quoted as ready to sign. As much trouble as he is in, he probably wants to insure none of his late night calls to his Bimbos are monitored. Its a DONE DEAL, just a matter of very little time.

By the way, the one dissenter in the House stated he voted against the bill because it "virtually took away the presumption of innocense for those accused, as is provided for in the Constitution."

Hi all,

I bought some times ago something called 'Techniscan'. That's in design a Yaesu front panel of the 80s, I've got it packed up in the original case, with docs. Does anyone know about the accessories quoted in this doc (converter, mainly) or any modifications which could be applied to the model. It currently scans from 26 to 520 MHz, am, fm and WFm. It works rather well for its age, but would even be better with improvements.

Thanks.

>all the way up to 30 MHz but some freq's be cut out later like 10 MHz to 11
>MHz
>for example ?
>

Well, this bill doesn't include a provision prohibiting shortwave receivers from covering certain frequencies, although it may inadvertantly make listening to certain shortwave communications illegal, such as press RTTY, private facsimile, etc. However, no where does HR2369 say it intends to have any effect on shortwave monitoring, nor are any communications (other than cellular and PCS) specifically protected.
As for blocking bands, I suppose someone who uses certain types of communications could come to Congress much the same as the cellular industry did. Who knows what would happen then. However, there are a couple of things that make that unlikely.
First, there are very few U.S. shortwave users that are not covered under Chapter 119's exemptions. Second is the very nature of shortwave transmissions. It would be awfully silly to ban receivers that cover certain bands in the U.S. when those EXACT SAME transmissions can be heard virtually worldwide. (Now I'm not talking about the same TYPE of transmissions, ala U.S. cellphone vs. British cellphone, but the very same transmissions.) Finally, since shortwave communications are dispersed throughout the bands and other users share the same bands (and sometimes frequencies) it would be technically inefficient (perhaps impossible) to block certain individual frequencies. At worst, I think the situation may mirror what we have with the 46MHz cordless phones. While it's illegal to listen to those communications, because other users share the same part of the spectrum the scanners continue to cover that range. Frankly, given the statement of intent that accompanies HR2369 I don't see it ever becoming a problem for shortwave listeners.

There's a Fire Department is getting some forehead microphones to test out on an experimental basis. The technology seems promising. I forget where I read about this - I think the technology came from some military app.

"Any" information? Well, the following is from a yellowed piece of
paper which has been up on the wall in my hamshack/computer room for
nearly ten years. I'm gonna have to type it in by hand, as while I
still believe I have the file on disk, it is in PetASCII text format
and recorded on media understandable by the Commodore 1541 disk drive.

I'm not sure about the origin, probably either the ham or broadcast
forums on either Compuserve or Quantumlink, or off of Ham packet.

==========

REPORT ON THE WOODPECKER SIGNAL

The Federal Communications Commission's high frequency network collected
data concerning "Woodpecker" radio transmissions during a one week period
begining August 14, 1988. All thirteen FCC Monitoring stations participated.
Over 400 observations of the "Woodpecker" signal were recorded.

The findings were:
1) The pulse rate remains at the 11 to 11.5 pulses per second.
2) The pulse width remains at 4 milliseconds.
3) The lowest confirmed frequency was 7 Mhz and the highest 1 Mhz.
4) The lowest confirmed bandwidth was 20 Khz and the highest 800 Khz.
5) The most occupied bands appeared to be 10.5 to 11.0, 12.2 to 13.0, and
16.0 to 17.0 Mhz.
6) The least occupied bands appeared to be 9.7 to 10.5, 11.0 to 12.2, and
13.0 to 15.0 Mhz.
7) The bandwidth mean was 150 Khz, and with a standard deviation of 207 Khz.
8) The air time of a signal was as a minimum, 7.7 minutes for the mean, 3.0
minutes for the medium, and with a standard deviation of 12.3 minutes.
9) All of the transmissions originated from a single source that was fixed
at 51 degrees 24 minutes North by 137 degrees 42 minutes East near the
city of Komsomolsk in the USSR.

These observations are essentially in agreement with the findings of
monitoring conducted February 23 through March 1, 186. This appears to
be the permanent pattern of the operation of the "Woodpecker"...

> Straining the bounds of coincidence, that!

I agree with you that Toilet Boy has tried to strain the limits
coincidence in the scanner groups. He is really naive if he thinks
people will believe is point of view or tolerate him in the long term.
But, from such an immature child, could you expect less?

> Will he admit, like a man, just what it was he did, now that
everybody
> knows? (HAA! What do YOU think?)

John Mackey is not a man, he is a liar, a fraud, and a coward. No matter
how many lies he is caught in and no matter how many times he is caught
dead to rights in some form of internet abuse, he will continue to try
to
lie his way out of the situation with his extensive denials. In his
twisted
little (very little) mind, he is blameless and the world at large, and
Bill
Cheek in particular, are responsible for all his woes. All those years
Mackey has been looking out of the window below is navel has distorted
his
perceptions of reality. In the future, we can expect more tap dancing,
lies,
and moronic behavior from Toilet Boy as this drama continues to play
out.

918. Anyone know state laws re: using scanner in car?

Newsgroup: rec.radio.scanner
Date: 1998-03-07 00:00:00 UTC
From: Chester Howes <howesc@delphi.com>
Message-ID: <5vQLI2J.howesc@delphi.com>
Source record: 167860

I'm sorry if this is already in a FAQ, but after searching yahoo, excite, etc., and looking at rtfm.mit.edu, I didn't find my answer.

Can anyone advise the legality of using a scanner in a vehicle. Main interest is Ohio, Indianna, and Kentucky: I chas the railroads, not the public service guys.

Any info will help.

Dirving the question: Someone told me Indianna prohibits them except for authorized public safety.

Thanks again,
Chester Howes

920. Old Bridge, NJ Frequency

Newsgroup: rec.radio.scanner
Date: 1998-03-07 00:00:00 UTC
From: Eric Plent <eplent@injersey.com>
Message-ID: <35020B63.106E7B10@injersey.com>
Source record: 167862

Can anyone tell me if the Old Bridge New Jersey Police have changed their dispatch frequency? The old frequency of 460.3750 went silent about a month ago, and I haven't been able to track them down since. The Police Call book lists some 800mhz frequencies but they too seem to be dead.

Any help would be appreciated.

The PRO-64 is not a trunk tracker, but it is pretty fast. If you plan on
only using a couple of TRUNK freqs, it can be done, but your best bet is
to buy the PRO-90 for TRUNKs.
The Pro-64 is a great scanner for the things that interest me.

I've been looking around and can't see any articles that cover modifications for this scanner. If anyone has any buried on their HD's somewhere, send 'em this way!

Another thing: what would be the value on a BC 230XLT scanner? It's in excellent condition, two rechargeable batteries, home and car power supplies. Is $200 too much to ask? Thanks for all responses!

From: hurst_m@hotmail.com
Message-ID: <6dt4fakmi1@nnrp1.dejanews.com>
Source record: 167869
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I'm preparing to modify my Pro-26 for 800MHz reception via the "virtual down-conversion" method. I have the service manual and a small (30W) solder iron. I would also like to install some type of on/off switch to allow for normal operation as well. What is the best place to install the switch and what type of switch would work best? Could using the switch generate any type of static charges, possibly damging the radio. Thank you for your information.

John, why don't you just admit that you've been caught?

Like an IDIOT, you CANCELLED Bill Cheek's and Richard Kendrick's
posts from the same NNTP posting host (206.133.225.31) in which
you posted 6 of your own articles.

I've enclosed the headers for the 6 Posts and 2 Rogue Cancels
that originated from your ISP (SprintNet) below. By the way,
this information has also been forwarded to abuse@sprint.net.

Did you know that Richard Kendrick's post was cross posted to
the news.admin.net-abuse.usenet news group. It takes real balls
to issue a Rogue Cancel in that news group. I guess that doesn't
scare you.

The manufacturers will grow tired of making "special" radios for
Americans, and will simply stop complying with FCC nonsense and get out
of the American market. The Canadians will then do a booming business
selling electronics to opressed Americans.

Cordless Telephones that employ speech inversion scrambling (typically 3300
3700 Hz), as well as some police communications (typically 3500 Hz)
can be descrambled utilizing a balanced modulator/demodulator circuit.
We have developed such a unit and are now offering it on our web site.

Surfdom responds:

I could not agree more that our laws should be at least as liberal as Canada, after al we are supposed to be the "home of the Free and Brave. That is Brave enough to not protect ourselves so much from doing stupid things like assuming that a transmitter of any type cannot be intercepted with silly laws that tax us to death and end up living in an Amerika instead of an America. This is the threat from the left. Now the threat from the Fascist holy rolling empire, bans on adult porn, access to the internet, and of course the right loves to protect big "BINNESS" like the cell phone industry. Proof of this is the fcc's inaction on allowing us to own readily available long range phones up 10 125 mile rage that uses your existing home telephone line. All you pay is for local telephone service. No tolls, no BY the minute bullshit! But the poor widdle substandard cell industry would rot on the vine. Wouldn't that be nice?

If it's digital you probably can't afford the equipment to listen in. If it's an Errickson system, they themselves probably won't be able to hear each other, just ask the Kansas City Missouri police/fire departments. They spent $20 million and they can't talk to each other in the same building! Really!! As a matter of fact some of the police/firemen are sueing Errickson for putting their lives in danger. For real!

:
:Randy

You can acheive that by simply adding or removeing a diode. The effect
is to remove 30 to 50 Mhz but add 76 to 90. The 76 to 90 range won't
receive anything without further mods so in effect the mod simply
removes 30 to 50 Mhz.

Search for the mod on the web or ask in this newsgroup.

Just received my MS 200 from Grove the other day. After waiting a week for my unit to arrive from Lentini, I gave up on them and asked Grove if they could match the price-they did, and the order was placed. As for Lentini, well let's just say there's nobody home.

I'm in a small town 8 miles west of Pittsburgh, and find the 200 works extremely well on a simple antenna, at the moment I'm using a Grove Omni, and am able to receive NOAA weather from Central Ohio and West Virgina...only birdie I've found is on low band; spoke with a engineer at Relm, and was told that while the earlier 200's had intermodulation/selectivity/birdie problems the current production run had incorporated some changes to the IF section. The small size, along with the back lit keypad makes it a nice choice for a mobile install. The programming software is neat, but mine won't work...have to spend some more time with it.
A excellent, feature packed radio for under $250.00....
Ed Hutton N3KEX

I am not a Relm employee, just a radio geek who loves radios.

An article in the Arizona Republic, Friday 3/6, (page B2 if you're interested) states that the Phoenix City Council has agreed to spend $70 million to convert the city's radio system, starting with police and fire, to a digital system that would "meet standards by the Association of Public Safety Communicating Officials." It does not state if it is a Motorola sytem, or whatever. The article also states that Mesa, Az, also is "buying an 800 MHz system that would meet association standards." The public safety portion of the system would be operational by late 2000.

982. Pro 43 for sale $60.00 -damaged-

Newsgroup: rec.radio.scanner
Date: 1998-03-07 00:00:00 UTC
From: FX1 <fx1@ix.netcom.com>
Message-ID: <6dr9u5$c0t@dfw-ixnews5.ix.netcom.com>
Source record: 167987

I have a Pro 43 for sale, here's the story, I am a weekend technician and I got a little carried away modifying this unit. I am selling it because I basicly soldered away d5, d4, and d3, trying to modify it for the all coverage including (shortwave). If you are good at fixing this unit I will sell it for $60.00, It still functions, you can get most frequincies using the 2,5,8,3,6, and 9 keys, however you cant use the 1,4,7, and 0 keys, I think I melted away a diode connector and it disabled it. Also, you cant use the manual or limit search options, you can only program it to store to banks. I still has the cell coverage, but remember, you can use all #'s but the 1,4,7, and) keys. born date is 6A2. Serial # is 008121 and FCC-ID is AA0020-300. some features that still work are the light, am/fm toggle, clear key, direct option, and you can turn on banks 2,5,8,3,6, and 9, (I think you get the picture)
$60.00, you pay for shipping.
PS: I am getting a Welz 2000, anyone know how good the unit is?
Oliver

Burt, Bill Cheek's information and dedication of helping others in this group doesn't qualify him as a immature child or that he gives crappy info. For all I know he is well known in this group and well respected. So what if he is suspected of having two names. If there is anyone that's immature it's the person who whines about it.

Just my opinion. ;)

cheer up,
FX1

cigarettes,
>beer @ $30/case, etc.

Maybe you have not checked the American Tax situation:

28% Income Tax
6% to 10% Sales Tax (Dependant upon what state and product)
$.15 to $2.00 surcharges for phone and communications
service to support United Services Fund for
low income communities.
6% to 15% Property Taxes (dependant upon State and Local
Govt.)

and on and on.

Every pay check I lose "donate" about 35% of my paycheck to Federal, State and Local Governments who only goal is to maintain their life style and work as little as possible.

I do not know what it like to live in Canada but, I do know what it is like to live here. From experience, the things I enjoied in amatuer and the scanning hobbies are now gone. I see my tax money wasted on the extreme rich and poor, with little services being returned to those who finacially support the system.

If you're talking about the supposed 800Mhz mod, forget it. Urban myth. You can get the frequency readout to display it, but no reception is possible because this scanner lacks the necessary front end to receive these frequencies.

The PRO 2004 can be modded to:
400 channels instead of 300
30khz spacing in cellular band
faster skip rate

There is a location on the net, can't exactly remember where, try
searching "pro 2004" you'll probably find it....

The TK-801 uses 2 proms for programming. The only way to reprogram the
radio is to use new proms and program them with Kenwood's programmer.
You'll need to find a Kenwood Communicatons dealer that has a
programmer from that era.

1006. scanner related software

Newsgroup: rec.radio.scanner
Date: 1998-03-08 00:00:00 UTC
From: kamst39+@pitt.edu
Message-ID: <6dv1hp$9ge@usenet.srv.cis.pitt.edu>
Source record: 167759

I'm looking for some software to decode some various subaudible tones
from my transceivers output. I can do DTMF via my mini dtmf decoder
from Opto that gets me DTSS decoding. I can do PL(CTCSS) with my DJ-580T.
Now, I want to be able to decode DPL, and a couple other tone types out there.

Now, I don't think my DJ-580T has a discriminator output and I dont think
there is a mod around to do that. However, the speaker output is definitely NOT
the same as the audio output jacks. Typically, with CTCSS, I can literally
hear the PL tone in the background. I can even tell a higher PL from
another just from listening. I can do this only from the audio output jacks,
either there is limiting circuitry on the speaker which blocks the low
frequencies or perhaps the speaker has a limited range of like 300hz and
up. Either way, I believe the audio output jacks should suffice for
decoding.

I need some software that is able to take a digitized file as input or
decode in real time from a soundcard. Has anyone seen anything out
there like this? It doesn't have to be tailored perse to DPL decoding but
just needs to display which frequencies(in hertz) are being used on
a specific audio channel.

TIA
Keith

bretth@westnet.com wrote:
> Can anyone tell me about this radio?

Nice enough radio. Good features and sensitivity but the
carrier-operated squelch allowed it to miss all but very
strong signals. Lots of internal noise so lots of birdies,
some of which are quite wide in coverage.

> When was it made?

Introduced in 1995, made for only about two years. Sold
for $400+ but clearance prices when discontinued were in
the lower $200s.

> Is it a decent full coverage radio?

Offered in two version : import(full coverage) and
domestic(cell blocked). It's a good 2nd or 3rd radio
but I wouldn't want to use it as my primary.

> How is the shortwave reception on it?

From the little testing I have done on it is on par
with the better radios in the field. But it doesn't
have SSB.

> Finally, anyone know what it is worth in excellent condition
> (used)????

I'd start at around $175.

Show me the text where it bans "owning" such a device. I believe
the ban is on "modifying" such a device. Also, show me where the
bill has been passed and signed into law.

>This would include those old TV sets that have UHF channels 72-83!!!
>So if you have an old TV, you are also a felon...

Indeed, if it bans "owning" such a device which was modified or capable
of such prior to the encatment of the law.

>
> Mark
>

If that is true, then it's now illegal to own many TV sets, since even many new ones can receive UHF channels 81-83 (868-890MHz). While the audio will be very garbled since TV audio is in WFM and cell-phones are in NFM, on some TV sets, a person could probably understand conversations. Virtually any receiver convering 800MHz frequencies will have images and other problems, allowing it to hear conversations un-modified. What language in the law bans ownership of cellular-capable radios?

1017. LAFD Firefighter dies

Newsgroup: rec.radio.scanner
Date: 1998-03-08 00:00:00 UTC
From: Brian Humphrey <brian.humphrey@prodigy.net>
Message-ID: <01bd4aed$65c8b980$12abedcc@default>
Source record: 167770

Southern California monitoring enthusiasts over a wide area were among the many who heard firsthand of the on-duty death of a Los Angeles City Firefighter.

Many have asked what they might do in remembrance of Captain Joseph Dupee.

I encourage you to take a moment to put pen to paper for his surviving family. I can hardly imagine anything less sensitive than a stack of computer printouts. Instead, I encourage those who feel so inclined to send their personalized condolences via postal mail to:

The Family of Joseph Dupee
c/o the Los Angeles Firemen's Relief Association
2900 West Temple Street
Los Angeles, CA 90026

I am certain that Dupee' s wife Julieann, a 2-year-old son, and a 10-day-old son that was born on his last birthday, will draw tremendous solace from such handwritten notes for years to come.

While Captain Dupee's family has not yet chosen an honorarium, many (including some prominent monitoring enthusiasts) have inquired where they might send a donation to help offset his young family's true and pressing needs.

Widow's and Orphans Fund
Los Angeles Firemen's Relief Association
2900 West Temple Street
Los Angeles, CA 90026 USA

Telephone: (800) 244-3439 -or- (213) 380-2900 M-F during normal business hours (Pacific Time).

LAFRA is a registered non-profit organization that supports the families of Firefighters. His widow and children can take comfort in knowing that they will ALWAYS be taken care of. Your donation will help Firefighters shoulder less of the burden. The Relief Association has a website (under development!) at: http://www.lafra.org

Thanks in advance for your generosity and kind handwritten words.

While they may not have the story in altogether perfect detail, you can visit these sites for further info about the fire that took Captain Dupee's life:

M Yuen <miltonan@pacbell.net>
from Pacific Bell Internet Services thoughtfully posted:

> I have an old Regency MX-3000 scanner. This scanner has served me well
> for years but now when I select scan, it will scan for a second or two
> and then it will give me an error message. I no longer have the
> manual. Anybody have any suggestions on how I can troubleshoot this?

What's the message????

Have you replaced the backup battery lately?

If the error is just "error", then that usually means that the
PLL cannot lock-on to a frequency, either because of a simple
programming error or something more serious.

The MX-3000 is very "dumb", as there is no "error checking" when
you enter a frequency. You can enter "bogus" frequencies (ones
well outside it's receive range, ie: 800MHz) and it will accept
them. But when it tries to scan them, it gets "stuck" on the
"bogus" frequency with a "error" message. It is also easy to get
the decimal point in the wrong place and not even notice it.

Most likely the backup battery went dead and you have lost some
of the programmed frequencies, and now some random frequencies
are in their place.

Replace the battery and step through your channels and make sure
everything is correct. Reprogram any incorrect channels.

Good Luck!

Cheers,
Paul Grohe

1021. RS Pro 2006

Newsgroup: rec.radio.scanner
Date: 1998-03-08 00:00:00 UTC
From: David Davidson <legend@cyberpunk.net>
Message-ID: <35033F15.E0FCE0CD@cyberpunk.net>
Source record: 167774

I just found this ng via www.policescanner.com, and I just wanted to say

that it has more useful real-time information for part time enthusiasts
such as myself than I have been able to find most anywhere else.

I have had a RS Pro 2006 for many years now, and every once in a while
I'll take the time to tune in and try to locate new frequencies to
listen to. But, after a while, I find nothing new except the usual dull

boring broadcasts from city services, taxis & shuttles, and assorted tow

truck companies, so my enthusiasm diminishes and I just use it for
monitoring local police fire broadcasts as well as the weather.

I have a few questions that maybe some one reading this message might be

able to answer for me:

1) Are there any accessories that I can buy that will help enhance the
receiving range of my scanner?

2) During a recent move (in which I had to give up my $100 RS discone
ant., etc.!), I lost the manual for my scanner. Does anyone have a
(xerox) copy they could send me?

3) I accidentally erased the frequency for LAFD (Verdugo dispatch), and
my notes listing my freqs were lost in my recent move. If you
anyone
knows that frequency, could you please email me to me?

I have just now begun to realize the resources available to me (like
this NG) via the NET. Maybe now, I will find the energy to become more
of an active participant in monitoring.

Dave

Bryce
these radios are basically bombproof, fireman proof, cop proof, bicycle delivery proof, etc..
In other words, Motorola portables are fine radios. But they are not designed to be scanners.
The JT1000 with the keypad reprogram is probably your best bet.. But that is a bet that will run
well in excess of $600 upwards to 2K for a smartzone MTS2000. You can run through a whole
bunch of light duty bearcats for that amount of money.

>years. New legislation will not help if the existing laws aren't enforced.

Please note. HR2369 makes not only divulging, but the simple act of listening to certain communications illegal. It changes the wording from "intercept AND divulge" to "intercept OR divulge."
Fortunately, most of the things scanners users monitor are exempt from the bill's effects.

DEFINITELY not legal, even with a ham license. Kentucky is known for having some of the most restrictive scanner laws in the country. A few years ago, there was a big news story about local cops in KY harassing a teenager who carried his HTX-202 (2m ham transceiver) on his bicycle and confiscating his radio.

Saw a scanner I really liked, not sure of the model..regency mx7000 or something to that effect. Grey/blue, slant face with blister keys, about 6" across and 9" deep (kinda like the older regency/relm bus. band mobiles..). At any rate, if anyone knows what these are, I'd like to know how hard it would be to come by one; price, availability, and when they were discontinued (if they're d/c'd).
thanks,
Randy

Greetings All,

With a serious lack of money in my bank account, I have decided that I need to part with my AOR AR8000. Here is what is included:

AOR 8000 (Version A ..completely unblocked)
AC Adapter
4 Rechargeable Nicads
Car Cig Lighter Adapter
Rubber Duck Antenna
RS Telescopic Whip Antenna
Manual
Box

(only thing missing is the battery cover, as it has been attached to my optolynx for so long I have lost it - new ones can be purchased from Design EQ for around 5 bucks)

I am looking to get $400.00 (OBO), make me an offer.....

Will ship COD and split the shipping with the buyer

Thanks,
BW

Yes, they are a sorry lot, but since you don't
contribute and since no one's been ornery to
you, what difference does it make?

> I don't know if I love it or hate it.

Sounds like a personal problem. This group, sorry
lot that they are, can help you with scanner problems,
but not with personal problems. To come on here with
personal problems is like bending over...... and someone's
going to come along and help theirself.....

> I can't wait to get home to see what happened on
> "as-the-rec.radio.scanner/alt.radio.scanner-turns".

Well, it is interesting....especially in the psychology
of the whole thing. You ever notice how the noisiest
and orneriest ones are those who have nothing to
contribute and basically no interest in scanners, and
otherwise, a host of personal problems?

> Thanks for a most interesting, if not somewhat annoying group.

Interesting, yes. Annoying? How? Don't you know how
to control your own computer much? If not, maybe you
```

need to haul off and kick the snot out of it and make
it behave a little better.

You shouldn't let an inanimate object possess you like
that. It's another personal problem that will get you
into a whole world of very deep doo-doo.

Words to the wise, my friend.

1060. NEW CRIMINALS: Scanner Owners who have older scanners that can listen to cellular calls.

Newsgroup: rec.radio.scanner

YES, thats correct folks. All of you here who are trying to sell scanners that have the ability to recieve cellular calls may well be ending up in someones database for future prosecution should you happen to keep the scanner, and, or sell the scanner to someone that can be tracked down. You who own such scanners and make note of it here could be easy targets for the FCC crackdown due to appear in the near future once the many millions of tax dollars have been given to them for this very cause. What will the penelty be? You will not only lose your scanner, but as I understand it now, you will be convicted of a FELONY which means that you will lose all rights to vote and own guns.
Did you sit on your ass while this bill made its way through Congress?
YOU ARE NOW GUILTY UNTIL PROVEN INNOCENT!
Where are sound minded men and women who can be trusted to run the country? We certainly do not have any in Washington today.
Please contact your Senate members (you have two) and tell them that you will not support their reelection if they support any bills that place new restrictions on scanner operation or ownershp.
If you and I do not call them, we will surely wish we had in due time.

In 13 metro areas, parts of the TV channel 14-20 spectrum are assigned
to Public Safety and general mobile radio use. In particular, TV Ch 20 is
used in Los Angeles and Philadelphia, with bases on 506-509 MHz and mobiles
offset 3 MHz at 509-512 MHz. Channel spacing is 6.25 kHz.
The General pool in both cities is 509.300 - 512.000, with additional
specific service assignments within the range. L.A. also has Public Safety
assignments between 509.300 - 510.275.

Spamming is sending a message to everyone or every newsgroup, whether or
not it's relevant to the receiver. It comes from the Monty Python sketch
that has the characters saying "SPAM" a lot. This would be different
from using a newsgroup for advertising.

Doug Younker <dougy@ruraltel.net> wrote in article
<34FF0BFE.3E32@ruraltel.net>...
Hello,

It's kinda scary that some would think being prohibited from
eavesdropping on private conversations, "is a dark day for freedom".
Restrictions on listening to others telephone conversations is as old as
party-line telephones. Tes the original Tauzin bull was broad in it's
restrictions. It is my understanding the ARRL along with other
interests was able to get the billrewritten in a more favorable form.

Message-ID: <EpIDC1.Axr@moraga.ness.com>
Source record: 167911

Oops, some typos made it into the following. Item 3) and the last
paragraph. The following is corrected.

==========

REPORT ON THE WOODPECKER SIGNAL

The Federal Communications Commission's high frequency network collected
data concerning "Woodpecker" radio transmissions during a one week period
begining August 14, 1988. All thirteen FCC Monitoring stations participated.
Over 400 observations of the "Woodpecker" signal were recorded.

The findings were:
1) The pulse rate remains at the 11 to 11.5 pulses per second.
2) The pulse width remains at 4 milliseconds.
3) The lowest confirmed frequency was 7 Mhz and the highest 19 Mhz.
4) The lowest confirmed bandwidth was 20 Khz and the highest 800 Khz.
5) The most occupied bands appeared to be 10.5 to 11.0, 12.2 to 13.0, and
16.0 to 17.0 Mhz.
6) The least occupied bands appeared to be 9.7 to 10.5, 11.0 to 12.2, and
13.0 to 15.0 Mhz.
7) The bandwidth mean was 150 Khz, and with a standard deviation of 207 Khz.
8) The air time of a signal was as a minimum, 7.7 minutes for the mean, 3.0
minutes for the medium, and with a standard deviation of 12.3 minutes.
9) All of the transmissions originated from a single source that was fixed
at 51 degrees 24 minutes North by 137 degrees 42 minutes East near the
city of Komsomolsk in the USSR.

These observations are essentially in agreement with the findings of
monitoring conducted February 23 through March 1, 1986. This appears to
be the permanent pattern of the operation of the "Woodpecker"...

I know how it's easy, but I am not gona tell cause people could listen in on my conversations. This would defeat the purpose for which I purchased the phone. Here's a hint tho, OKI, cpu, firmware, a couple of more chips. Or hack the phone you purchase.(Digital, spread spectrum of course.) canning the RX RF section and using a broader one.

Much deleted.

In ohio there is currently no law, city or county ordinance that prohibits the use of a scanning radio in an automobile, or in one's homes. It is currently legal to be ableto listen to police, fire, ambulance etc in your car. But please be responsible. If a bunch of us start using our scanners to go to the scenes of emergencies one of three things could happen, 1. if you get there at the right time you could be hurt. 2. If you become a problem you could have action taken against you, and 3 if enough of us do this irresponsible thing we could loose our priveledge to have a scanner in our cars. So please act responsibly.

Regards,
Bill Carty

Toilet Boy barely understands his own babbling, let alone the English language. Most of the lower primates suffer this limitation.

> You`re way to pathetic to let go on this one! Not only are you
> worthless, you are a liar. YES, I said LIAR. I hope you take me to court
> on this,

You have no fear of being sued by Toilet Boy. Even his own sister, the "lawyer" has assured him that nothing he says is prosecutable. With such a reputable source as that, you can sleep easy knowing, that by reciprocity, you can't be sued either.

> because I will own everything you own. (not that I would want
> your fleas and broke`n down dodge), but just to shut you the hell up!!!

Everything Mackey owns amounts to the complete collection of Richard Simmonds workout tapes and a defective sexual appliance. When you get custody of that Dodge Dart (the one Toilet Boy inherited from his mother),
be sure you get the stains in the back seat cleaned. She was very busy when she worked for Rent-A-Wench.

> You are good for a laugh every now and again, but that`s it. (well,
> there is that bad example thing you got going too)

Yes, Toilet Boy used to provide a laugh a minute. Now, sadly the laughs are few and far between. Excessive prozac consumption has addled what little mind he once had.

> I`ll give you 1 week to post SOMETHING on scanners.

Toilet Boy actually knows what a scanner is?

> After that, POOF. I can Get a good laugh from watching another
> monkey f_cking a football.

Mackey often wears his football costume.

> What do you say, Mac? Up to it?

"Up to it?" Nah, he's down on all fours again, his favorite position.

> Hoping you an early keyboard failure,
> Charlie

One can hope.

Where was this? When?

I suspect you just have a very convulated story of the HAM in
Hopkinsville KY a few years ago, who had his HTX-202 confiscated.

He was a teenager, but not on his bicycle. And, after talking
personally to some of the people involved, there was much
more to the story than made the internet.

you can have a scanner in your car in n.j. unless you are in the "commission" of a felony at the time. in other words, it's ok except on the days you plan to rob gas stations &liquer stores, then leave it home.

>Brent
>

There are two versions of the Pro-43 model. The Model 20-300 model is
able to be modified for cellular and expanded frequency ranges and the
20-300A model is not able to be expanded.

The cellular modified Pro-43 can have more frequencies opened
up than just cell freqs. When you do the modification that opens up
the cellular frequencies, you can take the diode that you removed and
place it in another position which will open up the 54-88MHz range.
Some ppl would argue that there is nothing in that range to listen to,
but there is a utility band at 72-76MHz. Our highway patrol actually
uses some frequencies in these ranges. Usually you are not able to
receive these frequencies on a typical scanner. You can also get hits
on TV channels 2-6 in this range, but due to the fact that the scanner
does not have the WFM circuitry, it would be garbled and what I
considered not worth trying to make sense of it.
Now there is another mod that is worthwhile and does not take
away anything from the scanner. It has become what most ppl have named
the "Pro-43 Shortwave" modification. You just need to add another
diode (1N4148) in the proper place and it would allow you to receive
splinter frequencies. You can force the scanner into 12.5kHz steps in
the cellular ranges where the normal freq. allocated steps is 30kHz.
Why is this good? Normally it isn't good, but it gives us a
non-standard splinter frequency. We can store this frequency, return
to the normal frequency steps. Now we are able to evade the CPU
programming of the allowable band edges allowing the scanner to search
beyond the normal frequency ranges.
Since the scanner doesn't really have a Band Pass Filter for
the lower ranges, it is best that you make a modification which allows
better reception with these lower frequencies. You can usually get
fairly clear reception down to 6MHz with a decent antenna. I don't use
the lower freqs as much, but sometimes it is nice to be able to pick
up the CB'ers which are just below the scanner's 30MHz cutoff.

While traveling down I-5 around Roseburg (south of Eugene), I found the OSP citing speeders using a fixed-wing plane and 3 ground units. the plane would fly northbound for a mile and identify the speeding car to the units. They were using 155.475, the NLMARS frequency. That day, they were around Milepost # 148, around the Truck Stop and the Rest Area. My question to the locals is: are there other air-to-ground frequencies that OSP utilizes ??

Yes, I agree that the term "MINT" is overused to some degree,
but I don't believe that MINT it isn't quite what you have described
it. If the unit that was bought and left in the plastic & styrofoam
box from day one would be considered to be "NIB" or "NEW-IN-BOX". You
just need to pay attention and ask questions. There are quite a few
scanners out there that have been 'babied' by the users and deserve a
few extra dollars for the care that they have been given over the
years. I bought a BC200xlt a few months back for $105 and had no
scratches, mods, etc. and what I would consider MINT shape. It comes
down to personal opinion and due to the fact that we can't keep posts
"on topic", I don't believe that we can properly set a "seller's
discription standard" which would be fair and uniform.

It's scarrier thinking that the next step would be that people are
prohibited from repeating anything told TO them, or NEAR them in a
public place.

Imagine that it would be illegal for someone to report on Reagan's
foopah "Bombing begins in ten minutes" microphone test, because while
the coment was made in open public, and on open circuits, it wasn't
"meant" to be presented to the public.

I have no problem with the privacy aspects of the law, IF, repeat IF,
efforts are taken to actually make the communication private. You can't
expect to take a crap on the side of the road and then complain that people
invaded your privacy because you didn't even try to to conceal yourself
behind your car or a bush.

There is NO reasonable expectation of privacy when you broadcast your
communications in the clear... however this world is full of unreasonable
idiots these days.

If I remember from my coin-collecting days...the term MINT was meant
for a coin sealed at the mint, never again touched with human fingers.
A coin in circulation but in "New" condition was termed "Very
Fine".....etc.
Mint should mean "as knew" no modifications, "tweaking" or other
changes to the equipment. I know for a fact when I see a rig
advertised as "Mint..with cell mod done" that it immediately turns me
away..cuz I've some of the so-called technicians in action...

Message-ID: <3502d7fb.1006322@news.auracom.com>
Source record: 167929

Hi,I have a PRO-24 made by Uniden and it no longer allows any keypad entry.No keys work at all!
It's more than dirty contacts(they are clean).
Any guesses as to the problem?
I'm thinking the main cpu chip has been fryed?
When I plug in a 12 volt source(proper polarity yes)
with no batteries the LCD reads "L",I turn the scanner off and back on and it scans the channels and will break squelch(when I turn it down).
Initially the channels had their freq.'s in them and you would hear activity,but now,nothing.....I believe the memoies have been lost.

thanks

I agree. without splitting hairs "mint" is pretty self-explanitory. too many people call their radios 'mint' just because they have kept the orignal box. I've had people try to sell me a "mint" radio & then they pull out a unit 'dulled' with age & dust or a radio thats been obviously just cleaned with windex. The funny part is that these people actually believe that their "baby" that they are parting with is MINT!!

"hi" from Europe,

for almost a year my Scout "reaction-tuned" my
Icom R10 flawlessly. All of a sudden the Scout
still finds freqs but quit tuning the receiver to the
detected freq.

Can anybody tell me how to determine wether
it's the Scout's fault (doesn't send CI-V data to
the scanner anymore) or if my R10 suddenly
went 'deaf'. (oh, and: yes, I did check the wire
that connects them ;-)

thank you, already in advance!

/\/\arkus Buttinger
Salzburg, Austria

P.S.: There's still warranty on my R10,
so I hate the idea of taking it apart...

Jon,
Here in the Raleigh/Durham area NCHP is still on
VHF-Low....BUT they do have a Talkgroup on the
Cary/Morrisville 800Mhz Trunk System....they Share this talkgroup (Uniden Dec
ID#4720) with pretty much all the
surrounding agencies (Cary PD, Raleigh PD, Durham PD,
Fire, Rescue, Duke LifeFlight, etc) as a way to communicate
with each other....They call this talkgroup "Tri-Comm" and
it stays QUITE busy as you can imagine!!! It sounds like you
live in the Charlotte area...gimme couple days to
look over my info for that area and I will email you
back if I find anything on Charlotte's 800Mhz system...
Hope This Helps and Happy Scanning and TrunkTracking!

While traveling down I-5 around Roseburg (south of Eugene), I found the OSP citing speeders using a fixed-wing plane and 3 ground units. They were using 155.475, the NLMARS frequency. The scanner was picking them up about 15-20 minutes ahead of the area. They were at milepost # 148, between the truck stop and the rest area. My question to the locals: what other air-to ground freqs does the OSP utilize ??

1097. PRO-64 programing

Newsgroup: rec.radio.scanner
Date: 1998-03-08 00:00:00 UTC
From: kd4ykv2@fuse.net
Message-ID: <3505ea2c.12917536@nntp.fuse.net>
Source record: 167937

I went down to RS and picked up one of these slick little radios on close-out. If you use MS Works as a frequency data base, here's how to make frequency lists for use with Ken Plotkin's LOAD program. Go to http://www.access.digex.net/~kplotkin/ to get the LOAD64.ZIP program.

Start Works and open a New database. In column 1 - Row 1 type a 1.
Next, highlight column 1 from row 1 down to row 400.
Next, click Edit/Fill series/Number/OK (make sure Step by: reads 1)
This will give you a sequential column of numbers from 1-400 to use for your channels. Give the column a name (CH). Go to column 2 and name it (FREQ). This is where you will Paste your frequencies to from your database. Now, Save As the document (LOAD.WDB), and your ready to use it.
NOTE When you Exit or Close the file you'll be prompted to Save changes. Click No and this will keep your document clear so you don't have to delete all the frequencies when you want to make a new .txt document.

Paste, or enter your frequencies in the FREQ column. Open a text editor program. I use Textpad. If you just want to load the frequencies and let the LOAD program assign the channel numbers, just Copy and Paste the numbers in the FREQ column to the text editor. The LOAD program will take these frequencies and load them into channels 1 to whatever. If you want to assign your own channels, then Copy and Paste both the CH and FREQ columns to the text editor.
NOTE - If after copying the CH and FREQ columns to the text editor, you have rows with channel numbers but no frequencies next to them, you must delete the channel number('s) or the LOAD program will not program properly.

The file should look like this:

1 154.190
2 154.220
3 155.760
4 453.325
etc.

*NOT * like this:

1 154.190
2
3 155.760
4
5 453.500

Save your text file('s) to the same directory as the LOAD program is located, and your ready to fly.

Yes, that's the one.

>He was a teenager, but not on his bicycle. And, after talking
>personally to some of the people involved, there was much
>more to the story than made the internet.

Yes, I have heard all versions. Whatever he did or did not do, however, there was no legal grounds for the local police to confiscate his amateur radio. None whatsoever. This was NOT a scanner...in fact, as everyone knows, the HTX-202 cannot even be modified for out-of-band reception! He had a license and a federally-granted right to carry that radio. Should have sued the department for violating his civil rights, IMO.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

1099. *FS: Transportable Cellular Phone w/ 2 antennas*

Hey there...

I have a Technophone 900 (clone of a Nokia) Transportible Cellular Phone for sale (or trade). Condition is about 5/10, but it works 100%!! Will work on the Analog (standart 800 MHz) system (both A and B carriers). Includes the Transceiver Unit, the Handset (with the cord), the 12 VDC plug (for connecting a ciggarrete ligher cord), original manual (in both Engligh and Spanish), two antennas, one is the "Rubber Duck" type which connects directly to the TNC connecter on the transciever unit, and a "Trunk Mount" mobile antenna, also with the cord and TNC connecter. Plus I also have some "Programming Info" for it. One more thing, the handset of the unit is damaged abit (there's a scratch going through the LCD) but the LCD functions perfictly. (Basicly only the handset is in rough shape, all else is in great shape.) Asking $30 + shipping. I am in the Philadelphia, PA area.

Yes, & isn't it SAD that BILL CHEEK is always the one to
bring up all the wierd stuff like sexual issues, accuse others
of personal problems, etc.

Perhaps if BILL CHEEK would change his ways, all the 'noise'
would go away!

Food for thought!

Bill Cheek wrote:

Hardly!

You seem to understand little of the modern business world! In order to stay productive in the work force, you must maintain a work force that
is efficient, lean, & effective. When one scope of work is completed, you
must focus your energy & resources on the next scope of work. When the duties
of work change, you must change with them. If you can't do that, then you are of no value to your employer & won't have a job for long.

Oh, I forgot, you DON'T have a job!

Eric, yes I agree with you, Richard & the others will get theirs
on judgement day. (Actually, I was surprised to see you say that!)

> As for Mr. Mackey (ugh!), His own actions of late (over the last 2
> years) have spoken more valumes about him than any words he could

Anyway, YOUR actions have spoken large volumes of yourself also.
Even larger volumes have been spoken about YOU by other people.
Would you like me to post some of the comments people have made
about you?

> On top of it all, he makes bold claims that I "threaten people with
> court action" every time I turn around (gee, I wonder when the last time
> was that I did that?).

Would you like me to post some of the statements YOU have made? How
about if I post your old signature file where you used to threaten
people with legal action at the bottom of every message?

Keith,

Why not try a small shared repeater panel connected to your unit? I use
the TP-3200 from Communications Specialists (Dealer Price $279.00) with
my scanner and have been very happy with it. CTCSS, DCS, DTMF are all
included; it's completely programmable from any comm program or
over-the-air, and best of all, if you get tired of using it just for
monitoring, it's a damned good repeater panel!

I'm looking for old Xtal controlled scanners. I've got a box of old crystals, and I figure most folks are throwing away those old scanners. I saw one ad for a guy in LA selling three scanners for $5 each. (They had sold a week before I emailed him.)

The crystals I have are cut for Regency scanners. I might take a chance on other models though.

I'm in San Jose, but for the right price I'll come pick yours up in the San Francisco Bay Area.

Also, I want one of those old Bearcat 101s. This was one of the first programable scanners. Got a broken one to unload?

How about an old Highband VHF variable receiver? vaccuum tubes? -no problem

I'm not rich, not a dealer, just have some time for putterring.

Dave

Hmmm, my MTS2000 Flashport only cost me $450, a B5 model!

1129. Advice? Pro 2035 + Scout

Newsgroup: rec.radio.scanner
Date: 1998-03-09 00:00:00 UTC
From: "Jeffery R. Smith" <jeffsmith@erols.com>
Message-ID: <6e20m1lrd1@winter.news.erols.com>

I have a Pro 2035 scanner, a computer, and an antenna on the roof. I am new to the hobby and have been reading this newsgroup long enough to learn there are evidently some better ways to use my resources. I have been looking at the scout and the board to go into the 2035. I have looked at Opto's webpage and think these may be a good investment.

I was wondering if any experienced scannists could give me the pros and cons about these devices. Also I am interested in monitoring the military aircraft band, would the scout be any good for this?

Any advice would be most appreciated.

Thanks,
Jeff

>
> Thanks for your agreement on this one DICK!

My original statement is shown below. You got NO agreement from me on
this point. The only member of the "group" you claim were attempting to
"keep Cheek in line & out of out hair on this NG" were the multiple
personalities rattling inside your puny mind. As usual, you lie and
misquote. You're still hallucinating again, Toilet Boy.

> > Yeah, a group of one. The only person that has been completely out

>
> You are right there, 2 years later Cheek is still harassing me.
> Someone should do something about HIM.

Seems to me, *you* are the one harassing Cheek. You are so frustrated
with Cheek that if he says the sky is blue, you'll pronounce him wrong.
You are the one with a grudge that just can't let it go.

> We have developed such a unit and are now offering it on our web site.
>
>
> CTP Descramblers

FYI, you can also do this in software (if it has already been done,
please mail or post a reference). The method is quite simple:

1) Sample the audio at 4x the inversion frequency
2) Invert every other sample (multiply by -1)
3) Play it back

That's all there is to it!

I'm using the PCR-1000 with ScanCat Gold SE and I'm very happy with the setup. I also use MAGIC! to import documents from the web and other sources. This way I can go to a given city and surf for some freqs, import them with MAGIC and start scanning right away with the PCR-1000. ALso the ZIP Drive case from Case Logic (avail at CompUSA) makes a great carry case for radio, power brick, antenna and RS-232.
Enjoy.

Well, I dont know the specs on the European 2042 or where you would buy one. The 2005 is 400 channels and if it's the older type, the type you cant buy anymore, its FULL COVERAGE . $450 is reasonable especially with the mods he put in. I would want more for it myself. :-)

I bought, but am very disappointed in it. However, since they use a
proprietary data file format, its a little hard to role your own. If you
order it, order it from Grove so you only pay $12.....

The reason is that you have the better receiver. He is receiving image freqs. and your scanner is filtering them out. Duel conversion vs. triple conversion.

1159. Pls help me with my PRO-66 and MDT hookups - Vancouver

Newsgroup: rec.radio.scanner
Date: 1998-03-09 00:00:00 UTC
From: Matt Dodge <dodgefam@lightspeed.bc.ca>
Message-ID: <3504E033.7B085A85@lightspeed.bc.ca>
Source record: 167651

Hey everyone hows your doin?
Im just wondering if anyone can help me with the location of the discriminant.... I have looked in side the beast and fount a silk screen

tag "TP3{test point??}DISCRI." with a little arrow pointing at a solder dot on the top layer. The thing that puzzles me is that the "TP" is not

directly on the chip... there are a few or one diodes between the chip pin and the "TP". And also what should I use as the ground for my out-put to my little 741 amp?
the case ground will do?? or is there a "special ground".... also my RS

scanner book shows that the Vancouver City Plolice's Data freq. is 143.055. Will MDT.EXE or MDTW1234.EXE or MDTSTUFF.EXE work on this freq. if not what freq. should I use instead???? Please And Thank you.

+FOR IMMEDIATE SALE+ - ALL PRICES OBO - ++++MAKE ANY OFFER++++

The following books are from the inventory of a closed mail-order
bookdealer. None are used; all in perfect condition unless otherwise
specified. Satisfaction guaranteed or full refund.

BYTE Magazine, FIRST TEN ISSUES, $30. Any full year, 1977-1981, $20.
Photofacts, Howard W. Sams, #1 through 1400 with some exceptions,
USED, good condition, any number (e.g., #23, #1004, #1350),
$4. Any folder (a particular radio, TV, etc.), $2.
Any 100 consecutive numbers, $250.
Telephone Accessories You Can Build, Gilder, Hayden 5748-2,
9th ptg, 1981, list $7.25. $4.
Novice Class Amateur Radio License Manual, Anderson, Sams 21529,
1st ed., 2nd ptg, 1979, list $3.95. $1.
World Radio TV Handbook, Billboard Publications, 1981, 1982, 1983, 1984,
1985, 1986, 1987, 1988, 1989, 1990, 480-600 pages, list $14.95 -
$19.95. $5 each. Additional copies, $3 each.
The IRCA Almanac, 2nd ed., 1980, list $9.95, $1.
Linear IC Principles, Experiments and Projects, Noll, Sams 21568,
2nd printing, 1980, list $9.95. $3.
Perfect Guide to Perfect Writer, Meilach, Sams 22186,
1st printing, 1984, list $16.95. $1.
Programs for Beginners on the TRS-80, Blechman, Hayden 5182-4,
2nd ptg, 1981, list $8.95. $2.
TI BASIC, Introduction to; Inman, Zamora, Albrect; Hayden 5185-9,
2nd ptg, 1981, list $11.95. $1.
Computer Design Development - Principal Papers, edited Swartzlander,
Hayden 5988-4, 2nd ptg, 1978, HARD COVER. Only $16.
Practical Design for Electromagnetic Compatibility, Ficchi,
Hayden 5685-0, 1st ptg, 1971, HARD COVER, list $14.95. $5.
Dr. Dobb's Journal of Computer Calisthenics & Orthodontia, Volume 5,
Hayden 5492-0, list $22.95, $10.
Radio Angels, Stack WA6IPF, Ham Radio, 1st ptg, 1978, Only $3.
Analog Instrumentation Fundamentals, Leonard, Sams 21835,
1st ptg, 1981, list $19.95. $7.
FM Atlas and Station Directory. 7th ed, Dr. Bruce Elving,
list $6.95, $1.
Miniprocessors: From Calculators to Computers, Heiserman, 195 pages,
2nd ptg, July 1978, TAB 971, list $5.95, $3.
Optoelectronics Guidebook---with tested projects, Fox, 190 pages,
HARD COVER, lst ptg, Jan. 1977, TAB 836, list $8.95. $2.

Introduction to Medical Electronics---for Electronics & Medical
Personnel, 2nd ed., Klein, HARD COVER, lst ptg, Jan. 1976, 310
pages, TAB 830, list $9.95, $3.
Aircraft Dope & Fabric, 2nd ed., Spencer, 160 pages, TAB 2313,
defective back cover, 1st ptg, 1981. List $6.95. $2.
VOM-VTVM Handbook, Risse, TAB 1390, 176 pages, 1st ptg, 1982.
List $8.95. $2.
How to Test Almost Everything Electronic, Darr, 160 pages, TAB 132,
10th ptg, Jan. 1981, list $4.95. $2.
Basic TV Course, Kravitz, 222 pages, TAB 105, 9th ptg, April, 1980.
List $7.95. $2.
The Fascinating World of Radio Communications, Wayne Green, HARD COVER,
176 pages, TAB 586, 1st printing, Oct. 1971, list $6.95. $2.
Saga of the Vacuum Tube, Tyne, Sams 21472, 1st ptg, 1977, 490 pages,
SOFT COVER, list $18.95. $10.
Shortwave Frequency Directory, 1.6-30 mHz, Robert Grove, 1st ed., 1982,
220 pages, spiral bound, $1.
The Handbook of Radio Publicity and Promotion, Macdonald, TAB 213A,
3-ring binder, 370 pages, 4th ptg, May, 1981, list $34.95, $18 OBO.
The Challenge of 160, Dunn, 54 pages, 1977, $3.
Reference Data for Radio Engineers, ITT, Sams 21218, HARD COVER,
48 chapters, list $44.95. $25 OBO.
S. Gernsback's Radio Encyclopedia 1927, McMahon, HARD COVER,
#1660 of 2000. Reprint 1974, 84% scale, Vintage Radio. 175 pages.
$26 OBO.
Hear All the Action, Waterford, Sams 21535, 128 pages, 1st printing,
1978, list $6.50. $2.
Guidebook to Small Computers, Barden, Sams 21698, 126 pages, 2nd ptg,
1981, list $4.95. $2.
A DXer's Technical Guide, IRCA, 2nd ptg, 1981, 98 pages, list $10.
$2 OBO.
The Truth About CB Antennas, Orr & Cowan, 2nd ed., 1st ptg, 1978,
240 pages, $2.
The Radio Amateur Handbook, Orr & Cowan, 1st ed., 3rd ptg, 1980,
188 pages, $2.

All prices (OBO = Or Best Offer) are PLUS SHIPPING and HANDLING.
First item, $1. Each additional item, 50 cents.

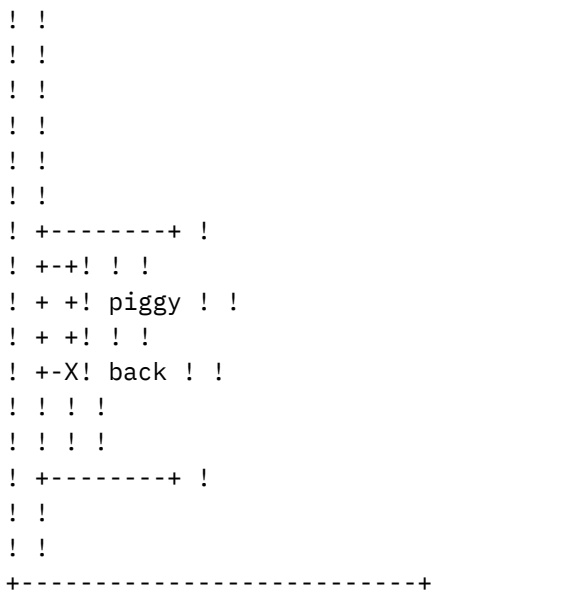
1166. Re: BC220XLT/BC230XLT Discriminator location ?

Newsgroup: rec.radio.scanner
Date: 1998-03-09 00:00:00 UTC
From: grubekg@t-online.de
Message-ID: <6e076o$149$1@news01.btx.dtag.de>
Source record: 167658

Here is where to tap the Uniden/Bearcat BC120XLT for a discriminator output. The 220XLT and 60XLT (and perhaps some other similar Uniden handheld models) might have a similar layout:



You want to tap pin 9 of the IC right left of the piggyback circuit, in the area where I made the X. I used an RCA (cinch) connector and mounted it on the rear panel right underneath the two screws for the belt clib. Then I drilled a hole in the clip and remounted it. This way, the RCA connector is in a secure, non-disturbing place. There is some shielding on the rear panel, use it for grounding the outer ring of the connector. Connect the (-) leg of a 2.2-uF (or so) tantalum capacitor to the center of the RCA jack. Connect the (+) leg od the capacitor via a piece of shielded cable to the discriminator pin.

If you don`t know how to connect all this, how to solder etc. keep your fingers off this project. It is tricky to solder in there.

1168. Oregon State Police - air-ground freq found !!

Newsgroup: rec.radio.scanner
Date: 1998-03-09 00:00:00 UTC
From: garretw@aol.com
Message-ID: <19980309002601.TAA18549@ladder02.news.aol.com>
Source record: 167693

While traveling down I-5 around Roseburg (south of Eugene), I found the OSP citing speeders using a fixed-wing airplane and 3 ground units. The plane was using 155.475, the NLMARS frequency. The scanner was picking up the transmissions about 15-20 minutes ahead. The ground units were around milepost # 148, between the truck stop and the rest area. My question to the locals is: does the OSP use any other tac frequencies for air-to-ground speed enforcement ??

1169. AR 8000 temperature while charging?

```
Radio Shack PRO-43 Modifications FAQ
<Last modified December 1, 1996>
<altered sections indicated by * in TOC>

CONTENTS

* 1. Introduction
* 2. Out of the box frequency coverage
3. Which units can be modified for extended frequency
reception?
4. Companies that will modify the PRO-43 for extended
frequency reception
5. The modifications
extended receive 800 MHz (original mod + solderless)
* extended receive 6-1000MHz
keypad beep delete
improved audio
attaching an S-meter
400 memory channels
extended receive (30-68MHz for European model)
* 5. Some fixes
* Unit reset
* Freeing from lockup after all banks deselcted
------------------------------------------------------------
1. Introduction

As long as there is a continuing demand for it, this PRO-43
modifications FAQ will be posted every month or so. In large
part, it is the file PRO43.MOD from pub/hamradio/mods/tandy at
oak.oakland.edu .

The FAQ now includes mods for

(1) extended receive (800 MHz:
original mod + solderless)
(2) keypad beep delete
(3) improved audio
(4) attaching an S-meter
(5) extended receive (30-68 MHz for European model)

There is also a mod for 400 memory channels, but, to quote
its author, it is very complicated, should only be attempted
by someone with moderate to advanced electronics experience,
and is not for the faint of heart or the "weekend technician."
A brief description is included at the end of this FAQ. If
the mod were included in its entirety, the size of the FAQ
```

would be increased four-fold.
---
2. Out of the box frequency coverage

30-54 MHz
118-174 MHz
220-512 MHz
806-823.9375 MHz
851-868.9375 MHz
896-999.9875 MHz
---
3. Which units can be modified for extended frequency
(800 MHZ) reception?

Note: In the United States, it is against the law
(Electronics Communications Privacy Act of 1987, public law
99-508, amended 1994 by public law 103-414) to listen to
cellular or cordless telephone communications. However, it is
not illegal to own equipment that can receive or can be
modified to receive such communications, even though it became
illegal as of April 1994 to manufacture or import equipment
that could be easily modified by the user to receive cellular
communications. Equipment manufactured before the cutoff date
can continue to be sold until stocks are exhausted. While
businesses are forbidden from importing cellular capable
scanners for resale, the question has been raised whether an
individual can legally import such equipment not intended for
resale. The issue is not explored here.

Which PRO-43 units can be modified for extended receive?
The best information is that units sold in the US and Canada
can be identified by the following scheme

Modifiable | Nonmodifiable
|
serial number no A in # | begins with A
FCC-ID AA020-300 | AA020-300A

There have been rumors that the correspondence between serial
number and FCC-ID may not be perfect, that is, there may be
some units judged modifiable by the serial number and
nonmodifiable by the FCC-ID, and vice-versa. Anyone with a
such a unit should send a message to gdallal@world.std.com so
that the information can be incorporated into this FAQ.

Date codes: Inside the battery compartment is a paper label
containing the date of manufacture in the form "month A year".
For example, 5A3 is May, 1993. The cutoff date after which
units could no longer be modifiable is April, 1994 (4A4). So
far, the earliest reported date of manufacture of a
nonmodifiable unit is 3A4 (March, 1994). There have been *no*
reports of a modifiable US 3A4 unit. However, there have been

reports of a modifiable Canadian 10A4 unit; it did not have an A in the serial number.

Until the rumors surrounding imperfect correspondence between serial number and FCC-ID can be settled, it is better to check the FCC-ID. But be careful. All units have A's in the FCC-ID. Only nonmodifiable units have an FCC-ID that ends in A.

THE PRESENCE OR ABSENCE OF A FINAL 'A' IN THE FCC-ID
IS A DEFINITIVE WAY OF DETERMINING WHETHER A PRO-43
CAN BE MODIFIED FOR EXTENDED FREQUENCY RECEPTION.
IF THE FCC-ID IS 'AA020-300', THE UNIT IS MODIFIABLE.
IF THE FCC-ID IS 'AA020-300A', THE UNIT IS NOT MODIFIABLE.

It has been reported that some units currently being made for sale overseas can be modified for extended 800 MHz reception. However, it is not known whether this applies to all overseas units or, if not, whether there is a way to distinguish modifiable units from nonmodifiable units.

The PRO-43 was produced under two brand names. My 3A3 unit carries the Realistic name; my 12A3 unit carries the Radio Shack name. At the moment, it is not known whether this represented a changeover or whether both types were produced side-by-side for a time. It is also not known whether their electronics are different.

There are no software modifications for the PRO-43. It is not possible to extend the frequency range of the radio by pushing buttons on the keypad. Such modifications are possible with other models, such as the PRO-51, but *not* with the PRO-43. The PRO-43, made by GRE (General Radio Electronics) of Japan, is one of Radio Shack's few triple conversion units. Radio Shack scanners with software mods are double conversion units made by Uniden.

Modification procedures for other radios are available by anonymous ftp from the pub/hamradio/mods/<manufacturer> subdirectories at oak.oakland.edu.

There is some debate about whether step (5) of the extended receive modification is worthwhile. According to Bob Parnass, from his "Improved Audio Mod", below:

"Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage."

So, if you trash the diode in step 4 or want to quit while your ahead, don't lose sleep over it. On the other hand,

quoting ray_reese@tscnet.eskimo.com (Ray Reese),

When I purchased my PRO-43 and did the mod for adding 54-88 Mhz, using the removed cell. diode, I wanted to be able to listen to the sound carrier for the tv channels 2-6 as well as the 72-76 Mhz band. It is worth the trouble to make the mode and it does work well in my area, despite not having the correct coils for that band area. Do the mod anyway, but [if you've trashed your original diode], use a 1N4148 fast-switching diode. Perhaps a 1N914 might do the job also. They can be found at Radio Shack for a cheap price.

---

4. Companies that will modify the PRO-43 for extended frequency reception

If you'd rather not do the modification for extended frequency reception yourself, Cellular Security Group, 106 Western Avenue, Essex, MA 01929 (508/768-7486) will do it for $40, which includes insured UPS return postage. However, CSG will not move the diode to extend the low band to 88 MHz; they only remove the diode to unlock the 800 MHz frequencies. When CSG is mentioned on the net, two types of comments follow: testimonials from satisfied customers and comments from those with the technical skills claiming that the service seems high priced for just removing the diode. But, there have been *no* reports of shoddy work or damaged radios. (They've modified two of mine.) Units are processed within 24 hours of receipt.

Grove Enterprises' newly advertised Repair Service will perform the mod for $40 plus shipping. They will move (rather than just remove) the diode in units that can benefit from it, but state that there is no way to tell whether the diode should be moved without looking inside. They claim that the determination can not be made from the serial number, FCC-ID, or date of manufacture. For further details, call Grove at 704/837-7081. In order to get a unit modified, a service order number must be obtained from the same telephone number. Packages without a SO# will be refused.

---

5. The modifications

From: armille@afterlife.ncsc.mil (A. Ray Miller)
Summary: cellular (870-890 MHz) and low band (51-88 MHz) restoration for PRO-43

A few people have mentioned the cellular mod for the PRO-43; it turns out you should not remove but MOVE the diode. Doing so allows cellular coverage as well as low band (up to 88 MHz) coverage.

Acknowledgments to Grove Enterprises; this information came from them.
They are selling the PRO-43 for $300 which is $50 less than Radio Shack.
I have no connection with them other than as a satisfied customer.

PRO-43
Cellular Frequency Restoration and Low Band Expansion

Note: It is not lawful to monitor cellular or conventional mobile telephone conversations.

The following procedure requires familiarity with microcircuit soldering and will violate your warranty. Grove Enterprises assumes no liability resulting from its attempt, nor will accept the modified scanner for return under any condition.

TOOLS NEEDED: Fine point, low power soldering pencil; solder wick or a desoldering tool; pointed awl, hemostats or pointed tweezers; small Philips screwdriver; solder.

1) Remove the battery, antenna and back cover (held in place by four screws).

2) Remove the six screws holding the top circuit board in place. Carefully unsolder the two antenna connections from the board. Bend the antenna ground tab fully up from the board. Carefully lift the board, unplugging the black connector at its base, and lay the board out of the way on its bundle of colored wires.

3) Remove the two screws from the next board and lift it, carefully unplugging the white connector at the bottom of the board. Lift it up and lay it aside on its brown wire (which can be unplugged if necessary).

4) Unsolder and remove the metal shield from the final board, revealing the microprocessor; note the row of diodes labeled D1-D5 above it. Only diodes D1, D2, and D4 are present; assisted by a pointed tool, unsolder and remove D4, the lone diode (this restores cellular frequencies which will be searched in 30 kHz steps).

5) Resolder the removed diode carefully into position D3 to extend low band coverage to 88 MHz.

6) Reassemble the boards, paying particular attention to the alignment of the plugs. Test the radio by entering any frequency between 870 and 890 MHz (cellular) and 51-88 MHz (low band).

From: IN%"savage@dg-rtp.dg.com" 2-FEB-1995 17:55:07.31

BTW, I did something similar [to the mod that follows] but MUCH easier... No soldering, removing antennas, PCBs, etc..

Just open up the Pro 43 and look down on the bottom PCB from where the batteries usually lie. You'll see the diodes there. Simply take an

xacto knife and and break the solder on the D4 diode (left-most on mine) on the side facing you. I just cut back-and-forth for a bit. Once the solder (it's surface mounted) is weak enough, I just bend up the diode a bit from the PCB. Presto. I left mine hanging on the one side with solder. If you continue to work it a bit, you can probably remove the whole diode.

--Ed

From: springel@umich.edu (Jason G. Springel)
Subject: MODing a Pro-43 without soldering

I just purchased a new Pro-43 to replace my Uniden 200XLT after reading many of the praises for the Pro-43 on this newsgroup. I decided to try and MOD it, but don't have a lot of experience with a soldering iron. After examining the scanner's innards, I found it was quite easy to "fix" with nothing more than a minature philips screwdriver and some small needlenose pliars.

********** Standard Discalimer from other MODs:

1-It is against the law to monitor cellular or mobile telephone calls.

*****2-Procedures outlined below [DO NOT] require knowledge of microcircuits, soldering and assembly techniques.

*****3-You will [NOT] need a low-wattage soldering iron, solder and other various tools to help in the procedure.

4-The following procedure will void your warranty.

****
Here is my new MOD:

Step 1

Remove the battery, antenna, and back cover which is held in place by four screws. Place the scanner keypad-side down on your working surface.

Step 2

Remove the six screws holding the top circuit board in place.

Step 3

Using a VERY small screwdriver (I used one from a Radio Shack kit), remove the two screws from the lower circuit board. Looking down at the unit, you will see that the screw on right side of the lower circuit board can be easily removed. Remove the screw on the left side by by sliding the screwdriver between the top circuit board and the metal frame which holds the two boards together.

Step 4

With these two screws removed, you can now lift the entire top panel (antenna, volume, and squelch knobs) along with the top two circuit boards as one unit. The two circuit boards will be connected to the final circuit board (the one attached to the front section of the scanner) by several wires. Simply set the top panel/circuit boards alongside the front section of the scanner and you can leave these wires connected.

Step 5

The microporcessor is located under the large metal shield on the final board (the front section of the scanner with the display and keypad). If you look under metal shield from the side closest to the bottom of the scanner, you should see the row of diodes labeled D1-D5.

Only diodes D1, D2 and D4 should be present.

Use a small pointed tool to break off D4. You actually don't have to remove it completely (unless you want to use it to restore additional frequencies as explained in other MODs), you can just lift one side so it dosen't make connection and then put a small piece of tape or heat shrink over it, so it won't. Make sure it's not lifted to high or the boards will not fit.

This will restore Cellular Frequencies in 30 kHz steps.

Step 5

Reverse the process to replace the top panel/circuit boards and the two screws that connect the lower circuit board. Replace the 6 screws from the top board. Replace the cover, etc.....

...the diode positions on the cpu board, of which only three are filled look like this. Where X equals a diode soldered in place.

D5 D4 D3 D2 D1

O X O X X Normal configuration

O O O X X Cellular modification(D4 removed)

O O X X X Lo-Band modification(D4 in D3's place)

These directions were based on an original MOD design whose origins I do not know. My thanks go out to the original author of that MOD! Hope this helps those of you who do not own a soldering iron!

PRO-43 Shortwave & Extended Receive
Al Mellon N8KLI

ification is only possible on radios able to be modified to receive the full 800 MHz range.)

Scope and nature of the modification: To allow the PRO-43 to receive frequencies from 6 MHz to 1000 MHz. This is accomplished by setting the PRO-43 to non-standard splinter frequencies, the CPU will then step the radio beyond the normal band edges. To derive the non-standard splinter frequencies

it is necessary to change the diode configuration matrix, and to use the monitor-search function. The hardware modification should take about thirty minutes. The remaining programming / search will take as little as 45 minutes (depending on how interested you are in the signals you encounter during the 806 MHz to 30 MHz search to be run).

I made a few attempts to make deals with various radio mod shops. Most felt the time needed to make key pad entries was too long to make a profit.

< This is a lengthy modification. It can be found in its entirety in /pub3/hamradio/mods/tandy/pro43swl.zip at oak.oakland.edu and at http://204.134.124.1:80/kc5kto/pro43swl.html>

From: ross@novax.llnl.gov
Date: 19 Aug 92 16:51:08 GMT

Here is my keypad beep delete mod for the RPO-43:

1. Remove battery.
2. Remove back cover (4 screws).
3. Remove top board (6 screws, desolder two antenna connections and bend antenna ground lead up out of the way). Be careful of black connector at bottom of board. Flip board over and lay aside (wire connectors need not be disconnected).
4. Remove middle board (remove 2 screws and wire connector). Be careful of two multi-pin connectors along underside of board. Set middle board aside.
5. Locate 10 pin connector on side of bottom board (labeled CN3). Note that one end of connector has pin 10 labeled as such. Count back to pin 6 and bend pin 6 ninety degrees towards the large RF shield. Make sure the bent pin clears the RF shield.
6. Reassemble and your done OR do the cell mod since you are so close.

Have fun. Gary Ross >usual disclaimer>

Subject: Improved audio for the PRO-43 portable scanner
From: parnass@cbnewse.cb.att.com (Bob Parnass, AJ9S)
Date: Wed, 2 Dec 1992 01:15:35 GMT

IMPROVED AUDIO FOR THE PRO-43 SCANNER

by Bob Parnass, AJ9S

The Radio Shack PRO-43 scanner audio is too bassy.1 The lack of treble makes it difficult to hear the PRO-43 in noisy situations, especially while listening in a car or truck. Louis Shirley sent me a schematic and suggested I remove C341, a tiny 0.015 ufd surface mount capacitor.

I'm glad to report that removing C341 made a great improvement. The audio is now much "crisper," more like the Uniden 200xlt, although still not quite as loud. Turning the volume control up still overloads

the PRO-43's small, internal speaker, but there's less need to do that once C341 is removed.

The PRO-43 contains 3 printed circuit boards, and the middle (second) board contains the audio circuitry. Finding C341 is difficult, as it is neither marked with a value nor a component designation. It is located on the foil side of the middle board, under IC304, an LM386 amplifier IC. C341 is in parallel with, and physically next to, R350 (33,000 ohm). R350 is slightly larger than C341 and is marked 333. Both R350 and C341 are connected between pin 2 of the LM386 and ground.

A Note About 50-88 MHz Reception

Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage.

---

Subject: S-Meter for PRO-43
From: schuster@panix.com (Michael Schuster)

Found this on the Fidonet scanner echo:

=====begin quoted text=================

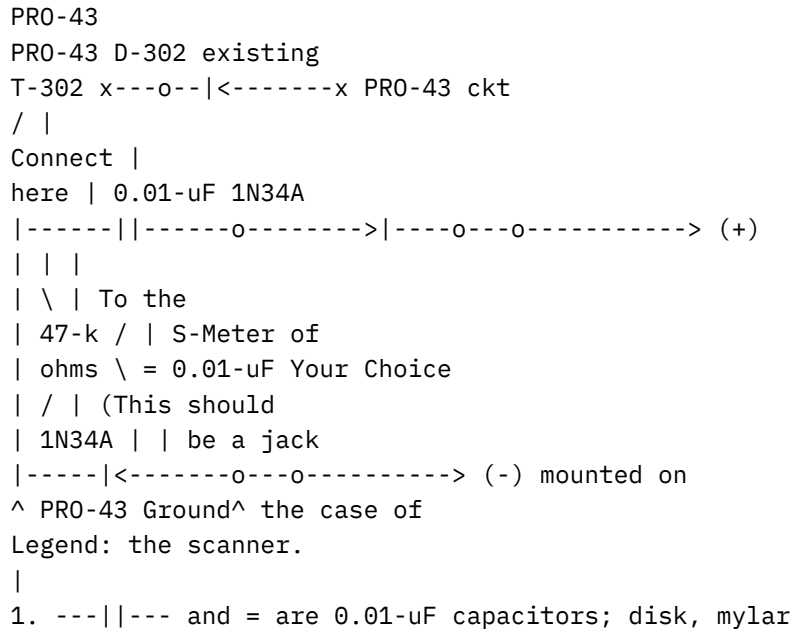
Date: 02-06-93 00:24
From: Bill Cheek
To: All
Subject: PRO-43 S-Meter!

Greetings Scanner Fans!

It had to happen! The fundamentals for an S-Meter exist alive and well in the PRO-43! Only a simple circuit and your choice of meter, analog or LED, is required for a jim-dandy S-Meter function!

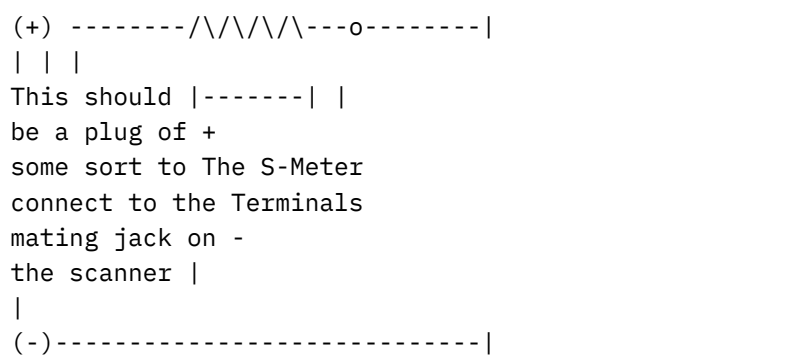
The key point in the circuit is the cathode of D-302 located on the bottom (solder side) of the AF Board (middle board). You will need the Service Manual for the PRO-43 to find it as it's not marked and it would take me 10,000 words to guide you to exactly where it is located. Call Tandy National Parts at (800) 442-2425 to order your manual: approx $10. Now here is the deal:

Locate D-302 and either build the following circuit right there on the back of the AF board in the vicinity of D-302, or solder a wire to the cathode of D-302 and route it to somewhere else more convenient to feed the below circuit. This wire ought not to be very long, though, say not more than a couple of inches. Refer to the ASCII schematic diagram as follows:



PRO-43
PRO-43 D-302 existing
T-302 x---o--|<-------x PRO-43 ckt
/ |
Connect |
here | 0.01-uF 1N34A
|------||------o-------->|----o---o-----------> (+)
| | |
| \ | To the
| 47-k / | S-Meter of
| ohms \ = 0.01-uF Your Choice
| / | (This should
| 1N34A | | be a jack
|-----|<-------o---o----------> (-) mounted on
^ PRO-43 Ground^ the case of
Legend: the scanner.
|
1. ---||--- and = are 0.01-uF capacitors; disk, mylar, monolythic, chip
|
2. --->|--- and ---|<---- are germanium diodes, 1N34A
| is cathode
< is anode
3. o means a connection, preferably soldered
4. The 47-k resistor is self-explanatory, I hope.
5. -------- and | are wires/conductors.
|
|
6. x is existing PRO-43 circuitry

If you use an analog meter, preferably a real S-Meter like salvaged from an old junked CB rig, then rig it as follows to connect to the circuit above:



You can also build the 10-segment LED S-Meter as shown in Volume 2 of my SCANNER MODIFICATION HANDBOOK, available from leading mail order radio dealers everywhere. ISBN 0-939780-14-3 published by CRB Research Books, Inc. Commack, NY.

After connected and working, locate the PRO-43 very near a known strong transmitter, perhaps a ham transmitter, a police cruiser, your favorite security guard's handheld or right next to a cordless telephone, or anything else known to transmit a strong signal. Tune the scanner to the frequency, and adjust the 5-k trim pot above so the meter reads exactly full scale. All other signals will read proportionally lower to yield "relative signal strength" measurements! A hell of a circuit here, boys & girls! Have fun!

Subject: PRO-43 w/400 CHANNELS HERES HOW!

IT IS NOT FOR THE FAINT OF HEART however.

PRO-43 ENHANCEMENT
MEMORY EXPANSION & "FADE-AWAY" LIGHT
Brett Bennett 4/12/94
bbb@kuhub.cc.ukans.edu
Copyright 1994 B&D Electronics All Rights Reserved

INTRODUCTION

The following document details two enhancement modifications that are possible on the Radio Shack PRO-43 scanning radio. The first modification doubles the factory standard memory capacity, allowing you to enjoy an additional 200 channels of memory, plus 10 more monitor memories. After completing the first modification, it is a fairly simple matter to add a 7 to 10 second delay feature to the LCD back-light lamp circuit. I designed and performed these modifications on my PRO-43 and they do work. As I understand it, there (has been/is being) presented in WORLD SCANNER REPORT a similar memory expansion. I have not seen this modification and for all I know it is a better way of doing it. What is presented is a 'clean-room' design of my

own that to the best of my knowledge is the only one to also offer a time-delay for the LCD back-light. Having said that, let me say:

I ASSUME NO RESPONSIBILITY FOR ANYTHING THAT MIGHT HAPPEN TO YOUR RADIO SHOULD YOU OR ANYONE ELSE ATTEMPT THESE MODIFICATIONS. WHILE REASONABLE CARE HAS GONE INTO THE PREPARATION OF THE FOLLOWING DOCUMENT, I CAN NOT GUARANTEE THAT THERE ARE NOT ERRORS.

The procedure described below is very complicated, and involves the soldering and desoldering of very tiny components and the cutting of printed circuit board traces. While the procedure is not irreversible, it will leave permanent scars inside your scanner. It should only be attempted by someone with moderate to advanced electronics experience. I don't think it should be attempted by, to quote someone else, a "weekend technician." If as you read through this you feel intimidated by the jargon and required procedures or if an electronic schematic looks like a strange piece of modern art to you, then this might not be the 'mod' you are looking for. The following document will assume you have obtained the materials listed below, especially the Service Manual, and you have studied the circuit in some detail. I will not describe in great detail where every component is or where every solder point on the logic board should be placed. Having the Service Manual, and having studied the drawings therein will allow you determine to where it is I refer.

REQUIREMENTS

1 - PRO-43 Service Manual. (Tandy Parts # MS-2000300 - approx. $6.00)
1 - CD4053 - Triple - SPDT analog switch - Surface mount package (DigiKey #CD4053BCM-ND - approx. $1.50)
2 - 93C67 EEPROMs (Tandy Parts # MX-8050 - approx. $13.00/each)
1 - 100k x 5 resistor network. Common lead type. (DigiKey # Q5104)
1 - UN2111 PNP transistor (Q1 on Logic PCB. Tandy Parts #)
1 - 1 uF 16v capacitor.
1 - 10 MOhm 1/8-1/16W resistor.
Misc.:
Wire wrap wire-30 gauge. (Radio Shack)
Grounded soldering iron with approx. 1/32" tip or smaller.
Desoldering Equipment.
Digital Volt Meter. (Used to double check your VCC and Ground connections, pre-check switching assembly)
Utility knife with fresh sharp small blade. (Needed to cut traces.)
Strong hand held magnifying lens. (Needed to check solder joints.)
+5-10 Volt bench power supply. (Used to check switching assembly.)
Anti-Static work place and grounding wrist band.
Very fine needle nose pliers, wire cutters.

From: IN%"millingtoj@oldhamlrd-po.oldham.gpsemi.COM"
"John Millington" 17-DEC-1995 04:55:31.71
Subj: RE: pro-43

The European Pro-43 comes with a diode in D1, D3, +D5.
Remove the diode from D5 and solder it in position D2.
The scanner will now cover 30-68Mhz.

Usual disclaimer.

---

6. The fixes

Unit reset (from the owner's manual)

If the keys do not work and the display is random, while
holding down the CLEAR and 0 (zero), turn the power on to
reset the scanner. Note: This clears all the information
Stored in the scanner.

From: IN%"randyrho@nauticom.net" "Randy Rhoades" 14-NOV-1996 00:13:32.24
Subj: Pro-43 Lockup Fix

Several months ago, the unit "locked up". When the radio was turned
on, nothing appeared on the display but the light button worked.
<RS repaired it, snipped>

It happened again.

<RR reports . . . [Before doing this, first try the reset above. GED]>
The problem seems to be in the software. The PRO-43 seems to forget
how to operate if all banks are de-selected. The software prevents
the operator from deselecting all banks but on rare occations this
routine fails. There seems to be no way to recover from this without
surgery. If you know any other way, please let me know.

THE FIX

There are lots of mod articles around describing the disassembly of
the PRO-43 so I'll omit it here. Disassemble the scanner down to
the CPU board and remove the metal shield. CAREFULLY lift pin 3 on
IC 2 so it no longer makes contact with the circuit board trace.
Reconnect the radio module to the CPU board, hold the back cover
in place, and insert the batteries. Turn on the power. The display
will look a little odd, but it will be apparant that the unit is
scanning. Press the number 1 on the keypad until the scan indicator
on the display shows band 1 is operating. Turn off the power and
disassemble the scanner again. Re-solder pin 3, replace the shield,
and reassemble the scanner. It's fixed !

The only trouble with the procedure is that all of your programmed
frequencies are dust. Just reprogram and thank God it works again.

Sounds like a great idea. I wonder why more mfrs haven't done the same?

I will, however, suggest that we go a step further. Banks make sense as a
routine way of grouping certain frequencies together, but inevitably you will
run into a situation where you'd like to monitor two different frequencies
that don't happen to be in the same bank without getting lots of spurious
interruptions from the channels in between. Sure, you can temporarily go
through and lock out the channels you don't want, or set up a special set
of channels just for that situation, but why should it be that much trouble?

I'd like to see "search lists" that would let you specify any artibrary
sequence of channels for scanning, regardless of what bank they happen to be
in. If I want to listen to channels 1, 7, 59, 158, 2, and 12, then, hey,

that's no problem. I'd even be willing to forgo a bit of scanning speed for the convenience, though I don't see why I should. :-)

And while I'm dreaming, I'd like a handheld unit with a multi-line alphanumeric display that can be programmed with call letters and a note as to the purpose of the channel ("State Police-Wesminster Barracks"). Right now I keep track of all these things in a database on my PalmPilot, but that's awkward, and memory is cheap enough these days that it could easily be built right into the scanner. I'd also like a computer interface port for control and programming to be a standard feature on all but the cheapest units. Again, why not? The more I use my scanners, the more I'm convinced that it's time for a major rethinking of what we consider standard features.

ROFLMAO! I don't know if anyone has an audio recording of Mackey
but he's certainly worthy of scientific documentation.

1183. NYC SOD/Highway Freq Change

Newsgroup: rec.radio.scanner
Date: 1998-03-09 00:00:00 UTC
From: nospam!morrisonj@usa.net
Message-ID: <6dvohj$om2$1@newsfep4.sprintmail.com>
Source record: 167708

FYI, SOD Primary, 470.8375, has had its communications moved elsewhere. 470.8375 is still operable but just not being used. SOD and Highway are using Citywide-3, 470.8625, as Primary Dispatch. Highway units are using Traffic, 470.8125, for car-to-car communications.

Citywide-3 is being referred to as "Mode 2 Position 6" and Traffic as "Mode 1 Position 1". The modes are banks and positions are channels. Generally speaking, SOD/Highway units use 24-channel Sabers; two banks times 12 channels for a total of 24 channels available.

Anyone have a rundown of the different channels in this new layout?

Later,
JohnM

HOWDY,

I have a three items for sale....

1. NEC Sportz Analogue mobile phone with 2 Nicad Batteries, desktop charger, car charger, leather case, stubby & full-wave antenna. In excellent condition with box and instructions.

2. Kenwood R-2000 Short Wave receiver. Coverage from 0 to 30Mhz. AM/FM/USB/LSB/CW Modes. 10ch Memory. AF Gain, RF Attenuation, Tone & Squelch Controls and Signal Strength Indicator. In Good condition - sorry no manual !

3. REALISTIC WORLD RADIO Model DX-380. Coverage includes LW (150 to 519 khz), AM Broadcast band (531 to 1710 khz), SW Band (1.711 to 29.999 Mhz) & FM Broadcast band (88 to 108 Mhz). Direct frequency input through keypad or manual rotary tuning option. Digital display, Signal strength sndicator, Dual time clock and Alarm. In excellent condition with instructions and protective travel case.

If you are interested in any of these items, email me with your price and contact details at:

MGB_F3XT@onaustralia.com.au
Attn: Richard

PS - I have receipts for all items.

1188. Re: AR 8000 temperature while charging?

Newsgroup: rec.radio.scanner
Date: 1998-03-09 00:00:00 UTC
From: Keith Grant <khgrant@ix.netcom.com>
Message-ID: <01bd4b17$5b44abc0$4122dccf@dogbert>
Source record: 167713

Pretty standard for it to heat up. You would be better off getting a
seperate real charger (and a 2nd set of nicads, too). The built-in charger
will kill your batteries pretty quickly due to over-charging/over-heating.
A good charger will drop the charging rate as the battery charges and will
end up with just a tiny trickle charge. The heating you notice with the
built-in charger is detrimental to the chemistry in the battery.
If you can find them, Panasonic sells a package of 4 - 1100 mah nicads and
a good charger for about $12 (I found them at Costco). These are high
capacity and seem to last a long time.

>yourself talk, so can the mic

and

>yes and no...in an enviroment with high background noise, the vox will
>often kick in, defeating the use of the ear mic.

No, bone conduction mikes work on that principle. Audiodonic mikes work because when you speak the sound travels back up your throat to the middle ear, through the ustation tube (Spelling?). There is sets up a vibration which causes the eardrum to vibrate backward, compared to hearing regular sounds. This is why you sound different to yourself, when you listen to your voice on a recording.

Well back to the mike, when the eardrum is vibrating it causes a pressure wave to travel down the auditory canal to the mike. That is how a earmike works. They sound somewhat clipped, and when you have a head cold, they are much worse. I have several of each kind, and have used many. VOX may or may not be part of an ear mike system.

: As I understand it, the Bearcat (and I think Radio Shack) trunk
: tracking scanners only work with the Motorola "standards." Our
: local community doesn't use that - they have (I think) GE radios
: which operate differently. Are there any scanners that handle this?

: Jason

Nope...not yet anyway!
BTW, most GE trunked systems will have 4 tones(or sometimes musical notes)
after each transmission...this helps identify them.

We Opto/Probe 3.0 users have had virtual banks for at least a few years. I can set up hundreds of banks in a single group, and hundreds of groups, which means I can have thousands of virtual banks! Each bank can have any number of channels up to 999. I can link any combination of those banks, assign them to a single function key, thereby creating virtual scanners with virtual banks. I could go on, but then you'll accuse me of bragging, it's that good.

One PRO 2005 with the following modifications.

1. 16 block memory mod./ 6.400 channels
2. A data/tone squelch installed. Makes shure the squelch doesnï¿½t
open on pagers,tones
and other digital signals.

3. S-meter circuit installed ready for external use (I use a
Volt-meter)
4. HamComm interface installed ready to decode pagers and others.
5. Discriminatoroutput installed.
6. Switch to turn on/off the beep.

The scanner is in fine condition.

Price: 450.- $ or highest bid.

- 10 channel uhf

2 TK-430 Kenwoods (1 has the keypad, one is minus a beltclip)
-both power up and displays work I'll attach Kenwood's babble about it

-----begin Kenwood babble

TK-430 (800 MHz)/431 (900 MHz)

TK-430 (800 MHz)/431 (900 MHz) is power in YOUR PALM. The
Kenwood trunked portable radios (LTR) can use any of 16 systems
with 10 groups each. So if your home channel is busy, these handy
portables will search out an open one in a flash. Any of the 16 systems
are programmable for either trunked or conventional operation. They're
built to stand up to the toughest environment, and engineered to the
durability standards of the U.S. Military.

Features:
Scanning - covers both conventional and trunked
channels
Power and Flexibility - with a robust 2.5 watt RF output
or a battery-saving 1 watt low power setting.
Field Programmability - makes it easy to set up,
reconfigure, or expand the system to meet your
every day usage.

Options
Dual Slot/Dual Rate Charger
Rapid Multi-Charger (6 units)
Leather Case
Speaker Microphone

--------end kenwood babble

The Maxon is new..... make an offer

Bill, I couldn't agree more. I think the best thing to do is ignore bad posts. If someone answers an honest question with some snide remark, we should simply press on with a good answer to the originator and ignore the flame. If we see a dangerous response, i.e. suggesting something that might lead to damage or injury, we should caution the readers about the problem. If, however we simply disagree with a response, we should state our position without resorting to personal comments or even professional assaults. When I see the flame threads, I mass delete them. Of course, I might miss some cute or pithy comments, but I don't read this NG for that, so I don't really miss anything. I suggest those involved in negative posts might want to re-evaluate why they visit this group and maybe try to remember when they were "newbies". Just a thought!
Dale

Ok - but what happens when the local drug dealer sues Grandma Bearcat
for disclosing to the police the transactions she overheard him make
on his cell phone?

Sure, the dealer's crimes are arguably more heinous - but the underlying
principle is the same. The dealer has every bit as much right to privacy
as the politician does (hey - wasn't that part of the contract on America?
no perks, no priviledge?)

If Justice truely is blind (and we all have to hope she is), she cares not
a wit that your favorite politician got dinged in the incident. The folks
that brought us the Newt tape are every bit as guilty as Grandma Bearcat,
and deserve the exact same sentence she gets...

IF it were a "Civil Right" then you wouldn't need a license for it.

You, like most people, confuse privledges with rights. Driving is a privledge, you have to be licensed to legally drive. Living is a right, you don't need a license to be alive <grin>.

And even real "rights" have limits. My rights end where your rights begin.

1224. how do I choose a new scanner?

Newsgroup: rec.radio.scanner
Date: 1998-03-10 00:00:00 UTC
From: Asnow <asnow@XXXexcelr8.net>
Message-ID: <3505C5B7.C277FB00@XXXexcelr8.net>
Source record: 167501

I am hoping you can help me with the purchase of a new scanner. I currently own a Uniden BC220XLT which I purchased about 4 years ago. I would now like to buy a full featured scanner and see what I have been missing.
There are so many possibilities as far as companies making scanners and models made by them and I am hoping that you will be able to assist me if not in making that decision to at least help me narrow down the options.

What I would like in a scanner follows:
? Portability. I would like a handheld.
? Full frequency coverage, no gaps from a few hundred K to 1.3 Ghz + (my current scanner Gaps at 174 ï¿½ 406 Mhz and cellular) guess I'll have to buy it out of the US.
? A price not exceeding (by much) $600.00
? A unit I can use to decode WEFAX, POCSAG, and other such transmissions into my home PC. (apparently I need to find a unfiltered DC-coupled discriminator-output MOD for my scanner before I can decode such information)
? A scanner that is not going to be limited in what it can do straight out of the box.

From what I have read so far the AR8000 is supposed to be the best scanner around, And I would love to couple that with the Optoelectronics Scout for reaction tuningï¿½ï¿½ but that may be higher than my $600.00 mark, and is it still considered the best scanner? I believe it was available when I bought my Uniden 4 years ago. Are there other scanners that have come out by other companies that can match or beat the AR8000? Are there any scanners other than the AR8000 that can reaction tune? What about in the near future?
I really don't have a favorite band to listen to, basically if it is there I will listen to it whether that is the local mall, an air show or some 800 Mhz activity to top off a night. I also bring the scanner with me when traveling by plane or ship, so a near field tuner or reaction tuner would be great to pick up local frequencies I could otherwise miss.

I have had some interest in the WinRadio and PCR-1000 units. Both of these units would be great from what I have read so far, but I am not ready to invest in a laptop to connect them to for portable use. I believe a handheld would really be my best choice now. But they sure are tempting!

There are just so many options available, and I have no way of actually seeing any of these units or trying them before I purchase them. So

basically if I gave you $600.00 what would you buy as the best combination of a scanner and a Near field Receiver (like the scout, or R11).

Just remove the "XXX" from my email to reply by mail.

IF YOUR SCANNER CAN TUNE INTO FREQUENCIES WITH A FOUR DIGIT SUFFIX THEN
JUST TRY PROGRAMMING THE NUMBER THE WAY YOU SEE IT WRITTEN DOWN. THE
SCANNER SHOULD AUTOMATICALLY DROP THE LAAST NUMBER BUT YOU STILL SHOULD
BE ABLE TO LISTEN TO THE TRANSMISSION

Thanks to Alex Blaha of Scanning USA magazine for providing the latest details on the new scanners from Sony!

The New Sony ICF-SC1PC Scanning Receiver
* Bi-Directional PC Interface with Search And Control Capabilities
* Supplied CD-ROM Lists All Receivable Frequencies Throughout The US
* Use CD-ROM with PC Interface to search frequencies and to create files using a variety of search mode options
* Scans all frequencies allowed by the FCC from 25 MHz to 1, 300 MHz (with the exception of cellular communications bands)
* PLL synthesized scanning
* 300 channel memory
* One-button access to police, air, fire/emergency, weather, marine, FM and TV frequencies
* Intelligent Active memory system
* Variety of Programmable features
* AM and Narrow/wide FM reception
* Supplied Frequency guidebook

Sony will offer it's new radio scanners in electronic, hobby and specialty stores beginning in April. Call Sony at 1-800-222- SONY (7669). Be sure to tell them that SCANNING USA Magazine sent you.

More details and a product review of the Sony scanner will be in future articles of Scanning USA Magazine.

Hi:

I know there are some fellow Milwaukee scanner-philes reading
r.r.s. and a.r.s.

Does anyone know the frequency that Medflight
(that's what we called it in Madison, maybe it's Flight for
Life here in MKE) uses when they are out on a call?
It seems to me that they'd have to contact the tower
at Mitchell Field when they're buzzing around MKE to make
sure that no big jets smack into the chopper but I've never
heard any radio traffic from Mitchell talking to helicopters.

Thanks.

-Scott in 'Tosa

Seem you are well overdue to get back to business Bill.

> The way I see it is anyone can make of it whatever
> they want..... and there is no way anyone can force
> anything on anyone else. So good ol' Ollie came on
> here whining and sniveling about what a trashed up
> newsgroup this is.....when in fact, he has the choice
> of making it utter heaver or sheer hell, regardless of
> what anyone else does.

Maybe in your mind he did but I don't agree. There is no way you will
ever convince me that the 100's of BS crap posted on here hasn't driven
away talent. Yes we can all use filters and such but in reality many
have just said screw it and don't bother to contribute to this
newsgroup. All the virtual bull crap babble aside that is a fact.

> He ALWAYS has the choice. But
> he piped in as a "poor ol' victim"....like he'd bent
> over and someone just helped theirself.

The guy was 100% correct. Your was as expected by him and countless others including myself. I don't see him as the poor old victim as you do and there lies the difference.

> Rubbish! It's that way only if YOU want it that way.
> He just as easily could have piped in, frothing over
> at the mouth, cup runnething over, and observed that
> this newsgroup was the coolest place he'd ever seen on
> earth.

Yea, right. That makes no sense at all. Seems opinions that your on going dance with Mackey cause you to froth at the mouth. You could have just ignored it but those comments always send you off on your virtual sermon.

> He could have observed that just as easily as
> the opposite extreme that he noted.

He could have if he was a moron. It was far better before Mackey showed up which is directly related to you showing up. You remove the noise and the level of meaningful posts will rise, or it certainly seems that way to me. I would be more than happy to be proven wrong but it isn't going to happen. Only a fool or an idiot would argue that 100's of off topic messages help improve the quality and number of participants of this newsgroup.

> There is no REALITY here, my friend,.....other than
> the reality that we CHOOSE to create.

What cyber-babble Bill. Give it up.

> Me....I like to please a lot of people, so I go betwixt
> the two extremes from time to time. Smacksie, Petey,
> and Hankie need pleasing same as everyone else. So
> they snivel, whine, and blow great big snotbubbles and
> want to hose 'em down. So I do. It makes them happy.

Geeze Bill, get a grip. You feed your ego or something with your little Mackey battles. It is your reality that seems disconnected from the rest. You must really feel good showing up an idiot like him day after day after day after day after day and then twice on other days.

> Then I post stuff about scanners and answer questions
> on 'em. I'm happy. You're happy. Everyone's happy.
> Nobody gets left out.

yawn

> Even Ollie......fer example.....he even observed right
> off that he was going to get hosed. Do YOU ever do that?

When it involves posts that have any connection to you that aren't praise I can say
I would normally bet on you posting a similar response as you did to

Ollie. You are very predictable in that sense Bill.

> I don't. I don't think you do. Why not? Because it is
> an explicit invitation to others to come around and bend
> you over and help theirself. They guy WANTED a hosing, see?
> Else, he'd have just made his point, if he had one......

Well some of us got and understood his point others including you
didn't. Maybe your mind is too intent on looking at things as if they
are all bent over. I dunno, it does seem to be a popular theme of yours
lately.

> See, the problem is that people can't understand a world
> where there are no victims and no heroes. But that is
> the way is here in these virtual forums. We all are
> armed to the teeth, and we possess or have the capability
> to possess perfect force fields as well as perfect plasma
> ray hyperzipzapwarp guns.

More cyberbabble and excuses for behaviors one normally would not
exhibit in public.

> Read good ol' Ollie's post again, word for word, and
> see where he welcomed a good hosing for his dismal
> view of the world around him. He said a lot and gave
> away a lot of himself.....poor fellow. But then he's
> used to being a victim....same as a mistreated dog
> doesn't know any difference.

Have you considered putting all this in a FAQ? In the future you could
just post the FAQ. I've seen this line from you so often it would save
you lots of time. Again, you see Ollie in a different light than I do.

> The main difference, however, is that dogs can't choose
> whereas people can. Like you, ferinstance....you can
> tell people to eat your shorts.....or offer to eat theirs.
> Or....express a disgust for shorts in the diet, period.

I usually don't get into such nonsense. Once and a while for Boy Prozacs
sake but that is it.

> Me, I like anchovies on my pizza...
>
> <shrug>
>
> It's always a matter of choice here in "virtuality".

Cyber-babble Bill. All of life is choice sooner or later.

> Tell me it ain't.

Why? That burning desire you have to argue and show all what you are
made of? Most all of us know Bill. We have seen and heard it from you a
million times. No thanks, no more today for me. Go play with Mackey, we

are through here I think.

Congress passed a law that limits our rights to listen to radio waves that pass through our houses. Until Congress the ban on scanners that receive cellular telephone frequencies, we were allowed to listen to anything as long as we did not discuss it.

Big business wanted a cheap means to avoid encryption of CelTel radios. It would be funny McDermott has the law over turned!

I figured for $12-13.00, it was worth the gamble....
I agree with the others, the dos version sucks...
Thought I saw somewhere that there is a Windows
version..... but you'll have to pay a lot more for that
one I'm sure.....

I recently purchased the PRO-67 hand held scanner. So far, I haven't been able to find any info concerning mods, ie. freq extension, recovery of locked out freqs, etc. Can anyone advise where I might find this info? Has anyone seen any writeups concerning the performance of the radio? So far, it seems to be a great performer.

Wally

For one you are well over the 25 words or less standard.

> Is Petie Joe Boe your personal problem?
> Did he dip into your shorts or something? I can't
> imagine that being so.....but what's the difference?

HEHEHEHE! No, but he doesn't even post things that relate to computers,
scanning or the like. He is one of the last of the Toilet Boy groupies
and has no reason to try and keep this newsgroup a kinder and gentler

place.

Anyway, he has changed his name to Bud or something and now believes he was never been on prozac. I guess the studio apartment, kiddy piano lessons and miserable life are all behind him now.

Just because Ollie expresses a desire for a nicer atmosphere in this group doesn't mean he can't control his computer or he feel victimized or molested. I certainly didn't read any of that characterization into Ollie's post.

Life goes on.....

No it's not possible to listen to GSM.

The transsmissions are digital and encrypted and they use special
techniques like multiplexing which ordinary scanners including
Winradio does not support.

I made my cable using Ken Plotkins recommendations and it works fine
with both my PRO-64 and my PRO-2041. I would suggest trying it
without the resistor and the tip wire. If that doesn't work, try a
shorter cable.

Nobody seems to know what the 1K resistor is for but it doesn't seem
to be necessary nor does the tip to DB9 pin 2.

I'm also using WFWG 3.11 but on an old 386 DX40 that I had laying
around. Which COM Port are you using? I think only 1 and 2 are
supported by LOAD. Maybe Ken can give you a hand, his e-mail

I am an avid listner to AM radio. I just purchased a Jeep and the
reception for AM radio stinks. Very weak signal. If I hold the antenna
with my hands it improves.

What are my options?

I thought of using a CB whip antenna but I don't know JACK about
antenni.

Can someone enlighten me please.

From: Andy Domonkos <domonkos@erols.com>
Message-ID: <350561DC.FD346B68@erols.com>
Source record: 167564

I have the final release of POC32 and it works great on a 486/50 system with 16bit Soundblaster card. It works as well on a Pentium based PC. I tapped the discriminator of a Pro2038 mobile scanner and I get 100% copy.

The problem is any long line appears to be truncated. Wondering if anyone else has this problem. The same output of the Pro2038 to the PD204 decoder system gives 100% with no long line truncation. Any ideas?

Andy

1277. Congressman Sues Over Taped Cellular Phone Call

Congressman Sues Over Taped Call

By DAVID ESPO
Associated Press Writer

WASHINGTON (AP) Rep. Jim McDermott intends to "vigorously defend" himself against a first-of-its-kind lawsuit charging he leaked the contents of an illegally taped cellular phone call involving House Speaker Newt Gingrich.

"This suit is part of a yearlong vendetta against Congressman McDermott because of his key role" in the ethics probe of Gingrich, his attorney, Frank Cicero Jr., said in a statement Monday shortly after Rep. John Boehner, R-Ohio, went to court.

Boehner's suit against McDermott, D-Wash., is believed to be the first case of one congressman suing another over his private actions rather than as a challenge to his official duties, lawyers on both sides said.

McDermott is "sued in his personal capacity," says the suit, filed in federal court in Washington.

Boehner's lawyer, Michael Carvin, said the distinction should quell any attempt by McDermott to defend himself by using the constitutional protections given members of Congress.

In his complaint, Boehner, the fourth-ranking Republican in the House, accused McDermott of providing the contents of the illegally taped call to The New York Times, The Atlanta Journal-Constitution and Roll Call, a newspaper that covers Congress. Participants in the Dec. 21, 1996, call included Boehner, Gingrich and other members of the House Republican leadership.

A Florida couple pleaded guilty to illegally taping portions of the call, and said they provided the tape to McDermott.

"The disclosure (by McDermott) ... was for private, partisan purposes, and was not essential to, or even related to, the legislative process," the suit alleges. "The disclosure was also made in wanton, reckless and malicious disregard for plaintiff's rights."

McDermott responded with a brief statement that said the suit is "obviously politically motivated and I refuse to dignify it with a comment."

Cicero, his attorney, added, "We intend to vigorously defend against this suit. We deny all claims of any wrongdoing and expect to prevail."

Boehner asked for monetary damages as well as punitive damages.

Regardless of the outcome, the suit appears to pose political jeopardy or potential embarrassment for some Democrats.

Officials involved in the case say Carvin, Boehner's lawyer, is likely to seek to question McDermott as well as Rep. Karen Thurman, D-Fla., whose office briefly had custody of the tape, as well as aides to House Democratic Whip David Bonior of Michigan.

Boehner was in Florida at the time of the phone call. During the conversation, he, Gingrich, Majority Leader Dick Armey, R-Texas, and other lawmakers and aides planned strategy in advance of an announcement from the ethics committee that a settlement had been reached in the speaker's ethics case.

Gingrich wound up admitting to ethics violations and agreed to pay a $300,000 penalty. The GOP high command was maneuvering at the time to make sure the disposition of the case didn't jeopardize Gingrich's campaign to win re-election as speaker.

Boehner filed his suit as a Justice Department probe into the taping of the call slowly proceeded.

John and Alice Martin, the Florida couple, pleaded guilty nearly a year ago to using a radio scanner to intentionally intercept the call. The Martins were fined $500 each last April and agreed to cooperate with the investigation. The Martins also said they delivered the original tape to McDermott.

Congressional sources, speaking on condition of anonymity, say the criminal investigation stalled after McDermott sought to stop prosecutors from compelling testimony from two of his own aides, as well as James Cole, who headed the ethics committee investigation into Gingrich. McDermott has cited a constitutional provision designed to shield lawmakers from legal jeopardy arising from the exercise of their official duties, these sources added.

Should a similar claim be made in the civil suit, it would be up to a judge to decide how the case would proceed.

The Journal-Constitution and Roll Call had no immediate comment on the suit. A spokesman at the Times said the paper "doesn't discuss its sources."

It is a great little radio but I doubt you'll find much
in the way of mods for it. The radios of today aren't what
they use to be due to the legislation of '90s.

I have an Icom R10 raidos that have the cell frequencies blocked.
It is one of the first ones so it can be Modified to the European
model.

I would like to do the MOD and need some info from someone that
has done the procedure.

Questions:

Can I pick up the resistors needed at Radio Shack?
If so, what is the part number?
If not, where would I order the parts?
Did you run into any problems?

Thanks for any help.
Tony.

> up about this whole cell thing.

Back in the 50's & 60's when someone came out with a dog of a movie or book, they would attempt to have it banned somewhere so the advertising could read "Come See The Movie That Was BANNED in _______. This would actually increase ticket sales as people would rush to see the movie that someone did not want them to see.

Not so long ago another movie, I believe the title was "The Last Temptation of Christ", was probably headed for oblivion until the Catholic Church deemed it sacreligous and picketed theaters showing the film. Naturally, when people got wind of this, they flocked to the theater to see what someone did not want them to see.

Now that government has deemed that people must not listen to cellular, folks who before didn't know it was even possible now want to hear what someone does not want them to hear. And that, fellow scanists, is probably why every fourth post on R.R.S is asking about cell mods.

Hi,

I just relocated to Spokane Washington and was wondering if anybody out there has a short list of frequencies for the area. Specifically I'm looking for Spokane Sheriff and City PD dispatch, car to car, special ops. I'm also looking for Spokane city & county fire dispatch, fire scene, special ops. .

I bought a scanner frequency guide, but to be honest with un-packing, painting, cleaning, moving, new job and such I just haven't had the time to sit down for the several hours it takes to sort through all the frequencies.

Any assistance would be appreciated!

Thanks. .

Not likely. The story was quoted straight from the AP Newswire, and has been posted on several News WEB sties (CNN, Seatle Times, etc).

If he does, then he'll be sueing you also for quoting the entire post.

Anyway, here's a copy of the same story that appeared in the New York Times, this morning.

Suit Filed Over Disclosed Phone Call Involving Gingrich

By LIZETTE ALVAREZ

WASHINGTON -- Rep. John A. Boehner filed suit on Monday against Rep. Jim McDermott, accusing him of publicly disclosing an intercepted conference call involving Republican leaders.

The suit, filed in federal district court here, accuses McDermott, a Washington Democrat, of violating the Electronic Communications Privacy Act by turning over a tape of the illegally recorded conference call to reporters.

Boehner, of Ohio, who heads the House Republican Conference, is seeking punitive damages and $30,000 in civil fines.

A Florida couple illegally recorded a conversation they picked up on a police scanner involving Boehner, Speaker Newt Gingrich, and other House leaders in December 1996. The leaders were discussing the political ramifications of the ethics charges brought against Gingrich, of Georgia.

Accounts of the conversation were published in The New York Times, The Atlanta Journal and Constitution, and Roll Call, a Capitol Hill weekly. In his lawsuit, Boehner accuses McDermott of leaking the tapes to reporters.

Boehner's lawyer, Michael A. Carvin, said that McDermott was being sued as a private citizen, not a member of Congress. The legal distinction is designed to curtail the added constitutional protections McDermott receives as a congressman.

Complaining about the pace of a Justice Department criminal investigation, Boehner said he decided to move forward with the lawsuit

to insure that the case got resolved either in civil or criminal court before the statute of limitations expired in December.

"Congressman McDermott and others have stonewalled the Justice Department's criminal investigation for more than a year," Boehner said in a written statement.

Bert Brandenburg, a Justice Department spokesman, said the investigation was continuing.

Reacting to the lawsuit on Monday, McDermott said: "This is obviously politically motivated and I refuse to dignify it with a comment."

Boehner received permission from the Federal Election Commission and the House Ethics Committee to use campaign money to bring the lawsuit. Any awarded damages, he said, would go to pay his legal expenses, and the remainder would be donated to charity.

Boehner was driving in Florida on Dec. 21, 1996, when the Florida couple picked up his cellular phone conversation. Convinced they were eavesdropping on what could prove to be an historic exchange, the couple, John and Alice Martin, tape-recorded the conversation.

Seizing on the tape as fresh evidence of a misdeed, Democrats said the conversation was proof that Gingrich had violated an agreement he made with the ethics committee not to stoke opposition to a House reprimand. Republicans said it showed just the opposite, and added that disseminating the tape violated the law.

In April, the Martins pleaded guilty to using a radio scanner to intentionally intercept a call. They were fined $1,000 and agreed to cooperate with the government in its investigation into how the transcripts of the tape wound up in reporters' hands.

The couple said that their congressman, Rep. Karen L. Thurman, D-Fla., had suggested they give the recording to the senior Democrat on the House ethics committee, McDermott.

The federal investigation into the tape hit a roadblock in December when McDermott invoked a constitutional clause to try to quash several subpoenas. The clause has often been used to limit the scope of civil or criminal court cases on congressional actions, and can extend to congressional staff members as well as members of Congress.

It is likely McDermott will use the same clause in his defense in the civil suit, Carvin said.

Yeah, well, you STILL visit with him. He whups his
outlooks on you and you whup yours on him, even though
the two are diametrically and diabolically opposed.
```

> Just because Ollie expresses a desire for a nicer atmosphere in this
> group doesn't mean he can't control his computer or he feel victimized
> or molested. I certainly didn't read any of that characterization into
> Ollie's post.

Well, hell, you can't read all that well, man. Take
me ferinstance, I don't come on here sniveling and
whining to people for the way they do things. And I
don't see an atmosphere on this newsgroup, either.

It's whatever the hell I want to see in it, regardless
of who does what to whom. In a short time, I am slapping
Smacksie, Petey, Hankie, and a few others back on my
Shit List and going on with business.

The way I see it is anyone can make of it whatever
they want..... and there is no way anyone can force
anything on anyone else. So good ol' Ollie came on
here whining and sniveling about what a trashed up
newsgroup this is.....when in fact, he has the choice
of making it utter heaver or sheer hell, regardless of
what anyone else does. He ALWAYS has the choice. But
he piped in as a "poor ol' victim"....like he'd bent
over and someone just helped theirself.

Rubbish! It's that way only if YOU want it that way.
He just as easily could have piped in, frothing over
at the mouth, cup runnething over, and observed that
this newsgroup was the coolest place he'd ever seen on
earth. He could have observed that just as easily as
the opposite extreme that he noted.

There is no REALITY here, my friend,.....other than
the reality that we CHOOSE to create.

Me....I like to please a lot of people, so I go betwixt
the two extremes from time to time. Smacksie, Petey,
and Hankie need pleasing same as everyone else. So
they snivel, whine, and blow great big snotbubbles and
want to hose 'em down. So I do. It makes them happy.

Then I post stuff about scanners and answer questions
on 'em. I'm happy. You're happy. Everyone's happy.
Nobody gets left out.

Even Ollie......fer example.....he even observed right
off that he was going to get hosed. Do YOU ever do that?
I don't. I don't think you do. Why not? Because it is
an explicit invitation to others to come around and bend
you over and help theirself. They guy WANTED a hosing, see?
Else, he'd have just made his point, if he had one......

See, the problem is that people can't understand a world
where there are no victims and no heroes. But that is

the way is here in these virtual forums. We all are
armed to the teeth, and we possess or have the capability
to possess perfect force fields as well as perfect plasma
ray hyperzipzapwarp guns.

Read good ol' Ollie's post again, word for word, and
see where he welcomed a good hosing for his dismal
view of the world around him. He said a lot and gave
away a lot of himself.....poor fellow. But then he's
used to being a victim....same as a mistreated dog
doesn't know any difference.

The main difference, however, is that dogs can't choose
whereas people can. Like you, ferinstance....you can
tell people to eat your shorts.....or offer to eat theirs.
Or....express a disgust for shorts in the diet, period.

Me, I like anchovies on my pizza...

<shrug>

It's always a matter of choice here in "virtuality".

Tell me it ain't.

:-))

I have a Pro 2035 scanner, a computer, and an antenna on the roof. I am new to the hobby and have been reading this newsgroup long enough to learn there are evidently some better ways to use my resources. I have been looking at the scout and the board to go into the 2035. I have looked at Opto's webpage and think these may be a good investment.

I was wondering if any experienced scannists could give me the pros and cons about these devices. Also I am interested in monitoring the military aircraft band, would the scout be any good for this?

Any advice would be most appreciated.

Thanks,
Jeff

> By God I am tired of this ongoing crap

Okay....so get some rest, then. No?

> Enough is enough.

You can't control other people. You can
only control yourself and your computer.

So do it. And watch the changes!!!

> People get a bait of this after so long.

Who? People? What people? Did "people" authorize
you to speak for them? Especially to make some
obscure point?

> Its not funny anymore.

To you, right? Are you speaking for others?

> Just goes to show how childish some people are.

Which ones? May we....ummmm....begin with you?

> Quit making bigger fools out of yourselves
> than you already are.

Is that an order? Do you expect people to
just obey you? What are your qualifications to
demand obedience?

> Thank you.

For what? Obeying you? Puh--leeze, leave me out
of that one. I am not the obedient type. I walk
in my own moccasins and resent the hell out of it
when others try to fit in, too. You just walk in
your own moccasins.....and you choose where YOU
place your steps and which ways you turn and how
fast or slow you go.

And stop trying to control others. You won't
ever succeed, so why pee into the wind?

Oh....and learn how to control your computer so that
it doesn't piss you off so much.

IMHO.

>
> Finally!

I agree!!! We need to hold everyone in Congress accountable for the laws that they pass.

By the way, he also voted "YES" on the new Wireless Privacy Bill that the House passed on Friday.

U.S. House passes wireless privacy bill
01:11 a.m. Mar 06, 1998 Eastern

WASHINGTON, March 5 (Reuters) - In a bid to protect privacy for cellphone or digital calls, the U.S. House of Representatives on Thursday voted 414-1 to make intercepting such phone conversations illegal.

The Wireless Privacy Enhancement Act makes clear that the act of interception -- whether or not the call is later divulged or disseminated in any way -- is against the law.

It bans modification of scanners that are now on the market that can easily pick up calls made on cell phones, and prevents a market for new scanners capable of intercepting digital communications.

The bill, which the Senate has not yet acted on, increases penalties for intercepting or divulging private communications, making them subject to a $2,000 fine and six months in jail. Earlier laws had not treated such interceptions as serious offenses if they were not used for financial gain.

Although the bill had broad bipartisan support, it was a particular favorite of Republicans, who were furious after a December 1996 cellphone conversation involving House Speaker Newt Gingrich and fellow Republican leaders was taped by a Florida couple. House Republicans have alleged that Washington Democratic Rep. Jim McDermott then leaked it.

McDermott -- who voted for the wireless privacy act -- has not publicly commented on those allegations.

Ohio Republican Rep. John Boehner, who was using a cellphone in his wife's car in that conversation with Gingrich, enthusiastically backed the bill.

``Our message should be plain and simple,'' he said. ``If you violate someone's privacy, you are not creating idle mischief, you are breaking the law and of the land and you will be brought to justice.''

Roughly 50 million Americans use some kind of new mobile electronic communications services, according to the bill's sponsors.

The sole vote against the bill came from Ron Paul, a Texas Republican. He was not immediately available for comment.

Just go ahead and enter the frequency into your scanner it will be close enough to work.

Trunked radio is a method of a number of users to use a limited number of channels. Because a single user may use any of a number of the available channels, and usually any user can use any channel, trunked systems are difficult to monitor on a standard scanner.

There are a number of references on the WEB concerning trunked radio. Check out the following URL as a starting place:

http://members.aol.com/wwhitby2/trs.html

Hope this helps

It's $65 an hour for beginners. The shack really pushed too. Especially if you don't meet your quota. The worst part is a lot of their merch isn't up to "normal standards" of product quality. Or they run the price way up.

The grounded pins supply Vss to the CPU, plus one line to inhibit Test. The ungrounded pins are Data/control ports which may allow different functions of the CPU to operate. Without a data sheet from the CPU manufacturer, it's very hard to say.

1325. Making Pro-64 computer interface work

Newsgroup: rec.radio.scanner
Date: 1998-03-10 00:00:00 UTC
From: mroberds@worldnet.att.net
Message-ID: <6e2mf2$31c@bgtnsc02.worldnet.att.net>
Source record: 167679

Hello all!

I am having some trouble getting the Pro-64 computer programming to work
and I wonder if anyone can give me some suggestions.

I built the cable per the specs in both Ken Plotkin's LOAD documentation
and Bob Hruska's WWW page. I used about six feet of standard four-wire
telephone cable with one wire unused. There is a DB9 on one end with
2, 3, and 5 connected. On the other end there is a 1/8" stereo jack
with the suggested 1K resistor across tip and ring. I was going to use
a short 1/8 stereo-to-1/8 stereo cord I had (about 6" long), but I
couldn't find it, so I used one about 6' long to give me a total length
of about 12'. My DMM says the whole assembly is OK as far as opens
and shorts.

I followed the recommended procedure: scanner off, connect cable, hold
3 and Enter and turn on. I got the "PC PGM" message on the display,
but that's about as far as I was able to get. Using the "LOAD" program,
I sometimes got a 1-Error (checksum error) or 3-Error (communications
error) but never a completed load or a "PC-Connect" display. I was
trying to load the short sample list that comes with the LOAD program.
I also tried modifying the timing in the LOAD.CFG file, and this didn't
seem to help much. As suggested, I tried using the reset button on
the side, both by itself and in conjunction with the Clear key as
explained in the manual. No joy.

I then tried to "do it myself" using a terminal program. I used Telix
in TTY mode, 2400 8N2, "Enter" sends CR/LF. Bob Hruska's page indicates
that as soon as you send the $999*F9 "attention" command, the scanner
should say "PC-Connect". I was unable to get this message. Here again,
I tried the reset/clear sequences.

Thinking perhaps I had a bum serial port on the computer, I tried the
other (known good) port with both LOAD and Telix...same results.
I even wondered if the 1K resistor was there to provide some kind of
feedback or level adjustment from the audio back into the data line,
so I tried it with the squelch on (silent) and with the squelch off
and the volume about 75% of the way up. Of course, I couldn't hear
it with the cable connected, but I was guessing that it might make
a difference - it did not.

Any ideas on where to go next? I am thinking of trying it on a
different computer. The one I tried all this with is a P5-100 running
DOS 6.22/WFW 3.11 with two 16550 serial ports on the motherboard.
I have read that some "kinda-sorta" RS232 interfaces, like I suspect
the PRO-64 is using, don't get along with "some" serial ports. Other

possibilities are clipping the 1K resistor, trying a shorter cable,
and maybe disconnecting the "tip" wire. The radio itself is a 7A7
date code, and seems to work fine when programming it from the keyboard.

I really can't complain, anyway, as this is a major upgrade from
my previous scanner, a Pro-20?? 20-channel woodgrain base model. :)
And I do appreciate the work that people have already done to figure
out this interface and make the programs available. Any further
suggestions, hints, or tips-and-tricks for making this work would be
appreciated. Thanks!

Oh no, of course not. I just can't imagine even

True enough. No sweat. But to waltz in all high
and mighty without being a contributor is tantamount
to .... well..... bending over. No? I mean, who's
going to take the poor sap seriously?

> > > What I'm I getting at?

> > I was wondering that myself......

Naw.....I *was* wondering....though he didn't
mince words thereafter.

I *don't* object. He can offer his opinions all he
wants. I was just sort of nicely telling him the
legends of the birds and the bees with respect to this
newsgroup. You know, counseling him a little....preparing
him for the worst.

By choice. Volunteer. No strings attached. Well,
one maybe.

You dish it out and you better be able to take it.
Can't stand the heat, you need to get outa the kitchen
and into the crocheting room. That's about it, though.

> > otherwise, a host of personal problems?

> We all have those, some just seem to bring them on here with them.

Speak for yourself. :-)

> of control? Trolled and Hooked? Hypnotized by Toilet Boy? Possessed by
> Boy Prozac?

Nah. I saw it as another good opportunity to explain a
point of view that I hold dear.....an opinion, if you prefer;
that there is no damn sense in people being "victims" in
this world of virtuality. You're a victim ONLY if you choose
to be.....but I can't imagine folks choosing it.

Thus, they *think* they're being victimized...molested....
impinged.....impacted.....hosed......porked.....whatever
you want to call it. But that's downright dumb.

There is a better way. Control your computer. Pop it
in the chops and be its boss. Make it do your bidding,
including erecting a force field around your domain so
that the things that could chap your hide won't. I mean,
what better place to "hear no evil; see no evil; and
speak no evil"?

Folks learned that back in the Bible days of networking
when they saw that if they didn't like the smoke signals,
they didn't have to look at 'em. Unless they wanted to.
But if they want to, then they can't snivel and whine.
They need to take it like a man....(or a woman, I guess.)
>
> > You shouldn't let an inanimate object possess you like
> > that. It's another personal problem that will get you
> > into a whole world of very deep doo-doo.

> So you too seem to have a "problem" with Ollie expressing his opinion?

Why do you think that? You eat something that disagreed
with you tonight?

> I mean you really got me confused here. OK, maybe easy to do but who
> forced you to read his post?

No one. Why?

> It seems as if Ollie's opinion has become
> your personal problem.

Why does it seem that way? Is Petie Joe Boe your personal
problem? Did he dip into your shorts or something? I can't
imagine that being so.....but what's the difference?

> > Words to the wise, my friend.

> In the end, the spirit of Rodney King seeps through! ;-)

Not with Smacksie around, it doesn't. Anyway, I was just
answering that feller and wondering how's come he couldn't
control his own computer. And kind of trying to plant the
idea that he can control it and he doesn't need to be
victimized and molested.

....unless he wants to, of course.

I used to work for them. Worst experience of my life. If they can't make at least a 50% markup (excluding sale merchandise), they won't sell it. Overpriced junk. Underpaid help. The reason RS clerks are all brain-dead is because that's apparently what Fort Worth wants: robots who won't question their policies or do anything besides go through the motions. The "good ones" either leave quickly for more lucrative opportunities or are forced out by their store managers or district managers, worried that they might end up with their jobs.

Joe,

I agree it doesn't make much sense, but the operator of the Motorola Trunked system in my area is doing exactly that. I posted a keypad trick that enables the radio to work even if the system it's monitoring is rigged to defeat the TT. I'll post again:

If your TT is experiencing the problem outlined below, try this keypad trick,
it works !!:

Hold the SVC, #2 & #9 keys down simultaneously while turning the unit on. This puts the radio in a diagnostic mode. While the characters in the window are blinking, hit the #5 key, then enter the key that has your trunked system programmed. Now scan your trunked system normally. If this doesn't totally eliminate the dropping out then start over but instead of the #5 key try #6 and so on, progress upward until you achieve the desired operation.

One word of caution though. Doing this will erase all frequencies programmed
into banks 6, 7 and 8. But it may be worth it if your system is rigged to screw with TrunkTrackers.

Seems to me this would also include about half of the cell phones as
well. You can put quite a few on "test mode" using keypad tricks, and
viola a cell phone scanner.... May make for an interesting court case,
put a cell phone on "test" record Newt talking to Paula Jones, sell
the tape to CNN, and get charged for using a cell phone to listen to
cell phone....

No. The discussion was about Ollie's comment and your cyber-babble
remark. If you want to discuss Petey and I start a new topic.

> > > Rubbish! It's that way only if YOU want it that way.

Quite often I do ignore Petey. You won't find threads that last for
months from Petey and me. There is an enormous difference between my
actions with Petey and you and Mackey.

> > > He could have observed that just as easily as
> > > the opposite extreme that he noted.

It was quite easy to tell from what he wrote. Misguided thinking it
would have any effect on your "peeing contest" but certainly not a
moron.

> > It was far better before Mackey showed
> > up which is directly related to you showing up.

That in itself would be a move in the right direction and probably many
would prefer it to the present state of affairs.

> And then when the 167th one of those in a week comes

> I'm not accusing you of babbling.....though I could.

Regardless of what you preach we are not talking to AI on here and every message has a real person behind the keyboard. It is all real Bill, only the content of messages may hold the untouchable but it is still written by real people.

> Why are you drifting off on that tangent? Why don't

> of the words, both in Websters as well as in the cyber
> glossaries. Then tell me why I'm wrong. If I'm wrong.

Write some messages that you are planning to kill Clinton. Send some threats to the White House through your E-mail and then tell the Feds that show up on your doorstep that it is all virtual and they can't touch you!

> > Geeze Bill, get a grip. You feed your ego or something with your little

> What's the difference, anyway, with you and Peter Breath Boe?
> You sure seem to get off porking him every chance you get.

Not true Bill, I have ignored him. There also is the difference that you don't see 100's of messages from us.

> Is this a deal where it's okay for you and not for me?

I NEVER said I was right flaming Petey did I? I am wrong most every time I do it. Usually I only reply when he steps on my toes but I really should ignore him. So what? Did somebody post a message complaining about me? Did I post that it all is virtual and said poster is .....! (fill in the blank) Nope.

> > > Then I post stuff about scanners and answer questions

>
> "Once in a while?" You're kidding? There are 21 posts
> from you in my recent queue, three of which are remotely
> on topic. The rest are to, about, or connected with
> Mackey and Boe. How do you explain "once in a while"?

Actually Bill, 43 posts since December 1997. More than three were
scanner related. If we are comparing you to me than once and a while
should be never. As I said above, I don't condone my "behavior" on this
newsgroup. It isn't positive and has no meaningful use to the scanner
hobby. Did I say differently?
> > > It's always a matter of choice here in "virtuality".

Version 2.0 of our Speech Inverter for Windows 95/NT and a full duplex
sound card is available at http://www.lpcom.com. This is freeware.

Many enhancements:

- MMX utilitzation
- NT compatibility
- Improved inversion algorithm
- Inversion point frequency display
- Inversion point fine adjustment
- Reduced computational latency

Some people argue that conversations on cellular radios should be no more private than any other radio communications. Historically, radio has been considered a public medium while telephone lines have been considered private. If someone broadcasts a message thorgh an unprivate medium and then through a private one, the communication would not have an expectation of privacy. The same rules should apply to cell-phones. The Communications Act of 1934, which prohibites wiretapping, does not prohibit listening to radio signals simply because they were also sent through a telephone line. Listening to cell-phones is only illegal due to the influence of the CTIA with legialstion such as the ECPA of 1986.

Hey everyone...I'm new to scanners, or I should say to there features since I have spent a lot of time using the basic features on my grandfathers...anyway I have read lots of FAQ and I was wondering this: Are the trunktracker radio's made so you can talk back, or what are they...I understand that with scanners you can only listen correct?

You got it Dave. Listen only.

I've read your technical pieces in MT over the years and respect your opinion and so I find it disheartening to see the kind of conversations you are engaged in here. The newsgroup is filled with personal attacks back and forth between you and a myriad of others. Why not take the high road Bill and stop responding ? You are better than this.

Just an opinion.

Sooooo, you can't be logical? I am beginning
to suspect you are not THE "Glenn Hansen" I
know.....or used to know. Am I conversing with
a forger, perchance or happenstance? In any event,
you certainly aren't serious about this matter.
You sure don't want to even TRY to see a different
point of view....but worse than that, you won't
bother to explain yours. Verrrrrry strange, pal.

> > Maybe. MAybe not. But I and I alone will make that
> > determination......without assistance. More or less

It says no more than YOUR actions of the past couple
of years..... So which are the loudest?

> > So what do you see? Him as being in full control?
> > Are you in full control? Does Petie Breath force
> > himself upon you and relieve you of your goodies?

They're related. You are coming from a very
non-constructive area.....trying to task me for
much the same in your makeup. I don't understand.

> > How's come you don't ignore Peter Breath Boe? Why
> > ignore dung? It still stinks....so you may as well

> actions with Petey and you and Mackey.

It's Petey's doings more than yours. He loathes you
and has to take a breather for his Prozac. If that
weren't the case, you and him would continually be at
it. Still, we're only talking degree..... not worlds
of differences.

> Victimized? You sure love that word. Is that what you feel?

Of course not. Where do you read that? I see
a lot of people perceiving themselves as "victims",
They come off as "helpless" and demanding of others
to resolve their problems for them.

> > And even if it was all huggy-kissy-smoochie, you'd have

> would prefer it to the present state of affairs.

Poppycock! It would get old mighty quick and the
clock would tick off the seconds before some pervert
would start it all anew. You know that.

> Probably, but you would have no problem keeping you "peeing" master
> title! :-)

Depends. If it's some low-life like Petey or Hankie
with no socially redeeming values, then I'll keep
'em on my Shit List more often than not.

> > It is a vicious circle, perpetuated by Mackey, Boe,
> > Hamptom, and their ilk.....the likes of whom outnumber
> > the chiggers in a blackberry patch. If it ain't one
> > thing, it will be another. You ought to know that.

> Yep, and all you have to do is ignore it Bill. Take control Bill. Read
> the FAQ Bill!

You don't understand. *I* don't have the problem, Glenn.
I respond to what I CHOOSE and not to what I don't choose.
Either way, nothing chaps my hide or alters my equilibrium.
Not here. Not in virtuality. I don't mind a good peeing
contest same as I don't mind a good chat about scanners.

My choice is simple. Until YOU....Mackey.....Boe.....
Hamhocks, and other such...*choose* to ignore non-topical
matters, then far be it from me to be the odd man out. I'll
go with the flow....and if people like to target me to
get their jollies, then what the hell? If they can learn
to lay off and respect the general idea of the forum, then
I sure can, too. But you?

You're a FINE one to be delivering preachments and
lectures. You want to accuse me of the same? hah!
If I preach anything, it's one simple fact.....that
there is no need to be a victim. No one can hurt you.
No one can spit tobacco juice in your eyes. The
topic of this thread....Ollie.....felt harmed, victimized,
ala HURT.....when there was no inherent need to feel
that way. I can't argue the CHOICE to feel that way.

This world has masochists and sadists. Maso's like to
be victimized. It's their thing. I don't understand
it, but I won't argue it, either. So the crux of my
preachments is to come to grips with your inner self
and what you want. If you are a masochist, then I bow
out. If you are "normal" so to speak, then listen to
what the hell I'm telling you: YOU don't have to be
victimized if you don't want to be. Between controlling
your computer and understanding that this isn't a REAL
meeting hall we're in....well, I would think that a
different point of view could emerge.....

A point of view that would make it a LOT easier to
ignore the scuzz of the earth, few and far between
as they are. But the first step is to realize that
they are impotent; powerless; and cannot possibly
victimize you.....unless, of course, you CHOOSE it.

> Regardless of what you preach we are not talking to AI on here and every
> message has a real person behind the keyboard.

Does that include Petey, Smacksie, and Hankie?

> It is all real Bill, only the content of messages may
> hold the untouchable but it is still written by real people.

You don't KNOW that in the purest sense. Petey
might call you a sphincter schnoz, but you don't
know a thing about Petey or, if in fact, it is HIM.
And you don't know if he was smiling or ripping the
phosphors off his CRT trying to get at you. You
don't know if he was being affectionate in a perverted
sort of way.....or if he was pulling the punches
and being very conservative in his estimation of
your schnoz.

You DON'T KNOW beans, man. Best you can do is
"think" you know.........

> > Then tell me why I'm wrong. If I'm wrong.

> Write some messages that you are planning to kill Clinton. Send some
> threats to the White House through your E-mail and then tell the Feds
> that show up on your doorstep that it is all virtual and they can't
> touch you!

It becomes "real" when they show up. However,
they will show up, NOT because it's "real"; rather
because it is a threat to reality. Big difference.
You've not made your "reality" case very clear.
You're not on my doorstep, either.....

> > What's the difference, anyway, with you and Peter Breath Boe?
> > You sure seem to get off porking him every chance you get.

> Not true Bill, I have ignored him. There also is the difference that you
> don't see 100's of messages from us.

I ignore him and Mackey, too. We're talking degree.
Besides, Petey is a friggin lunatic. Mackey is just
perverted.......

> > Is this a deal where it's okay for you and not for me?

> I NEVER said I was right flaming Petey did I? I am wrong most every time
> I do it. Usually I only reply when he steps on my toes but I really
> should ignore him. So what? Did somebody post a message complaining
> about me? Did I post that it all is virtual and said poster is
> ....! (fill in the blank) Nope.

So? So you're a better person than me. Live it up!
Proclaim it to the world. Don't tell me - I don't give
a hoot. If you're a better person than me, then the
"fruit of your tree" will have a better taste and be
carried around the world. <Shrug> I don't give a
flying fresh-picked booger if you're better than me.
Okay, so you are. Now what?

> > Ahhhhh, I see. So you DON'T like scanners and scanning?

> No, it is just after all these years I have heard the same line before.

Well.....truth is something that just doesn't change
with the whimsy and fickle perceptions of it. Lies and
misunderstandings certain change a lot. Might there be
a clue for you?

> > At least those topics bore you, eh? I mean...YOU don't
> > talk scanners and scanning a whole lot. Not at all,

> > that it doesn't count for much my being "predictable" here
> > and now. If it were to ever COUNT, let me know and I'll
> > mend my ways.

> Point went right over your head Bill, sorry.

No. It hit home. Now I say if you think I am so
predictable, then capitalize on it. Make something
good happen to you out of it....if you're so "right".
Otherwise, what's it matter?

> I didn't pick and choose I just don't agree with your interpretation.

How's come you don't do any more than disagree? Why
don't you state and present a case for your "opinion"?
Am I supposed to come around to your way of thinking
on your mere say-so?

> > Do you want a different one? Show me. Show me a
> > different one in how you treat Peter Breath Boe.
> > Examples are louder than words. Show me.

> What good would it do Bill? Will you follow my example? If not, then
> there was no point in the above paragraph.

You don't know WHAT good it could do until you
do it. I can't predict what good will come out of
YOUR actions. All I know is you're picking things
apart now.....and have no meritorious position of
examples or words on which to base your case.

You just "disagree". That's all. I *can* be
convinced now and again....but not on one-liners
like yours. State a case. Give me an example.

> > > More cyberbabble and excuses for behaviors one normally would not
> > > exhibit in public.

> > There is NO "behavior" in these virtual forums.

You don't understand, so you call it "babble". I see.

> > "Behavior"
> > is an item of action. There is NO action here. And what
> > there is, period, is totally and 100% *perceived*. It is
> > not in any sense of the imagination.....real. Tell me how
> > it can be.

> So when you going to send that virtual letter to Clinton to test this?

Why should I do that? I have no feelings of that sort to
him. Besides, it does not clarify your case. You're
suggesting something stupid and idiotic.....a schizo of
an idea, no less.

We're not talking toppling the federal government here.
We're not talking physical actions (reality) against
anyone or anything that is otherwise against the law.

Your allusion is an illusion....and a freaky one, at that.

> > I don't "see" Ollie. All I saw were words attributable to
> > him, and I read every word he wrote....individually and
> > in summation.

> Oh, thanks for the correction Bill. I guess another point went over you
> head. BTW, "see" doesn't always mean visual. Sheesh!

Nothing went over my head. But without body language,
voice inflections; and physical auras, you cannot possibly
deal with anything more than brass tacks facts in these
virtual forums. Our deal Ollie spoke of no facts. He
iterated perceptions and feelings. His. These are not
factual to anyone on the planet except to him....and he
could wake up the next morning with a different point of
view. So where does that leave your "facts".

All you have is a judgment. And a rush to judgment, at that.

> > "Once in a while?" You're kidding? There are 21 posts
> > from you in my recent queue, three of which are remotely
> > on topic. The rest are to, about, or connected with

> Actually Bill, 43 posts since December 1997.

I SAID I had 21 in my recent queue.....I didn't go back
to December. Second week in February, to be exact.

> More than three were scanner related.

Not since February 9th.

> If we are comparing you to me than once and a while
> should be never. As I said above, I don't condone my "behavior" on this
> newsgroup. It isn't positive and has no meaningful use to the scanner
> hobby. Did I say differently?

Then why sharpen your teeth on me? No facts, no examples,
and no case.....and a very poorly and loosely composed
idea period.......and I'm, supposed to do as you SAY; not
as you do?

Geezus H. Kriste, man, what tribe are you from?

> > There you go with the "babble" again. It isn't.
> > Not....unless.....you can't understand what I'm
> > talking about...in which case we have a problem
> > either of your lack of comprehension or my lack
> > of clear expression. Which is it?

> You.

Your say-so. But you won't even do me the courtesy
of stopping at first base and dissecting the first
thing you don't understand or don't agree with. You
won't cite your understanding so we can compare notes.
Instead.....you say I am "babbling".......

But I am supposed to FOLLOW you? Really?

> > > > Tell me it ain't.

> > > Why? That burning desire you have to argue and show all what you are
> > > made of? Most all of us know Bill. We have seen and heard it from you a
> > > million times. No thanks, no more today for me. Go play with Mackey, we
> > > are through here I think.

> > Wow. Wild. Crazy. Far out.

> I never said that and you didn't answer my question.

You posed a fallacious question. It's roots are
an assumption and a fallacy. I can't answer it.

And....you never said WHAT? I quoted what you said
verbatim......

> >I take it you don't like me anymore?

> I never said that either. I made a comment on your schooling Ollie. I
> still love ya man! :-O

Well, then don't retreat to your corner hollering
"babble". If it's "babble", then you don't understand.
If you don't understand, then make me make you understand.
Or.....you make me understand. One or the other.
Or both.

> > Throughout your entire series of posts, you have
> > continually injected little personalisms, adjectives
> > that were not initially fired at you, and you've
> > methodically avoided hitting the nail on the head,
> > in terms of the subjects discussed.

> You need to read it again without your chip and ego.

I have. Several times. You are not dealing in facts
and substance and tangibles. Your position is one of
simple "disagreement". And personalisms......

> > You want scanners and scanning talked about here?
> > Show me. You are capable of talking radio. You
> > are capable of answering a lot of the newbies'
> > questions. You are capable of talking higher level
> > stuff, from computer interfacing to digital decoding
> > to satellite reception.

> > But you don't.

> Oh, but I do on occasion.

A matter of "degree", huh? So the 'ho who turns ten
tricks a week is a better person than the 'ho who turns
20 tricks a week? Good grief....the pot calls the kettle
black. Brazenly, too, it appears. Ballsy-like.....

> OTOH, I don't post 100's of messages a week about nothing.

Ummm....me neither. Not even Mackey does that.

> So what? Are you challenging me? I think you are treading
> on grounds that can't support you Bill.

While we have established that you are a better person
than me, I am most assuredly willing to walk on water
and other "grounds" that don't support me. I wouldn't
have said it, if I weren't willing. Yes.....you are
challenged.....certainly to practice what you preach,
for starters.

> > Don't task me until you've either corrected or
> > at least explained your own failings. That's
> > only reasonable and fair.

> I did Bill. Guess you just were too virtual to read them.

The first you've 'fessed to your own failings was
in this latest post. And yes, I read them, but not
before you could finish the post. In prior posts,
you did not make clear that your position was something
to the effect:

"DO AS I SAY - NOT AS I DO."

Now that we have established at least a semblance
of a framework of your logic, let us proceed from
there and see if we can convince each other...or
otherwise, figure out a solution to your problems.

Me....I don't have any problems and am not a victim.

If I am somehow victimizing you, let me know what
I can do (besides sending money) to help you out
of your unfortunate circumstances.

The best I can figure out right now....and giving
credit where it is due.....I've got to say you've
picked up a case of "eye-rectitis" where your optical
nerves got crossed up with the rectal nerves and
gave you a shitty outlook.

I just don't know what can be done about that.
It's a personal problem, and I'm not qualified
to handle those. Sorry. But I'm *certain* you
will understand. I'm counting on it.

PS: One more time......about Ollie.....I want
you to take a long, close look at his
SUBJECT line. Factor that in with his
"poor ol' me" observation....and tell me
what the hell his zipper has anything to
do with anything? And why it wasn't legit
for me to wonder if that zipper was on the
seat of his wretched britches........

Eh?

> How about Radio Shack?

Many better radios. But none sold in the USA
can be modifiable for cellular, thanks to a law
passed in 1994. You need to get a pre-1994 scanner
if cellular trips your trigger.

1360. Monitoring Newt's conversations

Newsgroup: rec.radio.scanner
Date: 1998-03-11 00:00:00 UTC
From: wb5sxk@aol.com
Message-ID: <19980311230101.SAA25130@ladder03.news.aol.com>
Source record: 167415

When the stuff hit the fan concerning the monitoring and taping of Newt's cellphone conversations, did anyone get the idea that something was awfully strange about the alledged scenario?

I believe the tape was about 20 minutes long. The people who were monitoring it were supposed to be in a vehicle, driving along an interstate highway when they just happened to hear a familiar voice on a hand held scanner that they didn't know had been modified for cellular use! They then held a pocket tape recorder up to the speaker and got an excellent quality voice recording.

Several things are wrong with this

1) When was the last time you were able to track a cell-conversation for 20 minutes. Even in a small town like ours, the signal would have been handed off several times, and a real chore to even find, let alone tape.

2) You're doing this from a moving vehicle. In 20 minutes you've move through the coverage area of several cells. What's the range of a cell to a hand held scanner...inside a moving vehicle?

3) I've heard a couple of snippets of the tape. The audio quality was remarkable to have been done with a hand held scanner with the mic of a pocket recorder.

Now...

What do you think are some alternate explainations???

Were one of the participants to the call taping it and then it was leaked using the
cell phone scanning as a cover?

Was there an illicit wiretap ... and again, the cellphone story used for cover?

What do you think?

<..>

And here is what Ollie wrote....

I know I'll burn in hell for this but...

I regularly lurk in about 50 newsgroups, plus I jump in and out of
dozens more. What I'm I getting at? This group has the most ornery
bunch on usenet! I don't know if I love it or hate it. I can't wait
to get home to see what happened on
"as-the-rec.radio.scanner/alt.radio.scanner-turns".

Thanks for a most interesting, if not somewhat annoying group.

Yep, sounds like the plea of a victim Bill. I was wrong, not.
I still agree 100% with Ollie. I also understand why he picked the
subject line. You have done the same yourself.

BTW, I said your virtual reality spiel is cyber-babble. Bullstuff. If
you want to be a victim and interpret it as all your writing is babble,
that is your choice.

Like new, purchased 11/97 in Hong Kong. UK bandplan (unblocked)
1000 channels, including original box, manual, nicads and 120VAC
wall charger.

This scanner/receiver is fantastic. Covers 500 Khz thru 1800 Mzh !
Nothing is blocked -- hear EVERYTHING. AM/SSB/CW/NFM/WFM all mode
handheld receiver.

$495 + shipping OBO.

Email if interested.
thanks,
Joe N0IAT

1365. For Sale--Pro26 and Pro-2035

Newsgroup: rec.radio.scanner

Hi All,

It appears that someone is issuing Rogue Cancels again from an
Open NNTP Server at Texas A&M Univ. All Posts and Cancels via
this Open NNTP Server "boisdarc.tamu-commerce.edu" seem to get
a NNTP Posting Host of itself "boisdarc.tamu-commerce.edu".

All of the posts cancelled from this server appear to belong to
John Mackey, however, they do NOT appear to have been issued by
him, because the Browser Type used was NETSCAPE Standard 3.01
running under Windows 95. The real John Mackey runs NETSCAPE
Gold 3.01 under Windows 3.1.

These are the headers of the Rogue Cancels that I came across
this morning:

1368. Internal Speaker

Newsgroup: rec.radio.scanner
Date: 1998-03-11 00:00:00 UTC
From: Flipper <kennyamy@earthlink.net>
Message-ID: <6e7867$bt2@ecuador.earthlink.net>
Source record: 167423

To All,

Can anyone tell me if there is a scanner that has a internal speaker larger or louder then the one's Bearcat, Radio Shack, Uniden, etc? I drive a semi and it is very hard for me to hear what is being broadcast. I know that I can use a external speaker and even a headphone. But due to the fact they I drive Hazmat my company will not allow me to use these external products..

Thanks

Scan Man

I have a non-functioning 2004 also. Once the radio was completely dead and I found that the a.c power cord was bad at the point where it mounts to the chassis. I think if you try it on 12v and it works then it could be the a.c. cord. But probably not. I read that R235, a resistor on the main board can cause problems in 2004. I looked at mine and there is a 2200mf capacitor in the area that appears to have leaked. Mine turns on but no display, It has the backlight but no digits, and the squelch won't open but I can hear static when I turn it on. I will post on here after I check that R235 and the 2200mf cap. I had let the radio sit for a long time after it died and just recently got it out. It worked briefly and quit again. Good luck with your 2004. I know the RadioShack will repair it if you don't want to risk destroying it by fixing it yourself.

Two words: Private Calls

I'm curious to know if someone like yourself could simply tell the
trunktracker to track the outstanding channels being used that can't
be accounted for when tracking normal talkgroups. We know already
that the trunktrackers will track these transmissions, as they show up
as active repeaters on the display, just with no accompanying tg's.
Hell, I'd PAY you for that if you put it in a "deluxe" version. :)

Even if Newt was parked, the copy was very good. Let us hope that McDermitt getting nailed will help convince Congress that taking away freedoms (like the freedom to listen to what comes thru your house, ie radio waves) is not a good idea.

Maybe this will result in a test case for the Supreme Court. Besides, it sounds as if this couple was using a professional CelTel interception unit (like the cops have).

My main interest with my scanner is aviation. I have found the FREQs
for my local airports. With the amount of sports events around here, it
is not unusual to look up in the sky and see a blimp. I was wonderring
if anybody have the frequencies for the GOODYEAR, MET, and FUJI blimps,
along with any other blimp.

It most likely is a Regency MX-7000, mfg by AOR. I bought mine back in 1985, am still happy with it, and will probably never sell it. By today's standards, it's a really slow scanner at only 7 channels/sec out-of-the-box. A simple mod brings it up to about 10 ch/sec. Also, memory is only 20 channels. The '7000 really shines when it comes to selectivity, sensitivity and image-rejection. It's the only radio I own that I can listen to the 900MHz trunked systems clearly, where active frequencies are sandwiched together every 12.5 kHz. The only drawback is that it takes some patience to learn how to program; it's not quite as intuitive as a typical Uniden unit.

One plus about the design of the unit. I accidentally left mine outside in a torrential rainstorm once, but the inside was relatively dry.

San Francisco has recently added its first police helicopters in many years to service. Has anyone heard these yet? What channels and call signs are they using? What are their hours of operation?

The press photo seemed to indicate that the helicopters were not equipped with Nightsun spotlights so perhaps they're restricted to day ops?

Our former helicopter, a Hughes 300, used the call sign 3V1 so if something like this pops up it might be them.

All information appreciated.

Regards,

Dick Dillman

Hi,
you may want to check out the following mods bible:
Radio/Tech Modifications & Alignment Controls 8A (Ham radio outlet)
Those guys describe exactly what to do.
Basically you only need to exchange diodes D9 and D10 which are located
on the main PCB but hard to find without a picture (donï¿½t have it).
You need to get the parts from ICOM since usual diodes wonï¿½t do the job.

Hope that helps
Karsten

1382. "H & S"----what does it mean?

Newsgroup: rec.radio.scanner

>Is THAT fair?

It's far more fair than what you do here. It's also untrue, but we'll
let that pass.

>> > Re TV Antennas for scanners......
>
>> >THAT....and only that was the "bullshit" to which
>> >you were "subjected".
>>
>> That is hardly the whole story.
>
>It is the whole story as far as YOU were concerned.

No, it is not. What gives you the right to tell me what concerns me?

>You galloped in out of nowhere to attack me for my
>stand on using TV antennas for scanner beams. There

I did not.

>were no other issues betwixt thee and me.

Yes, there were.

>> >Your "victimization" wasn't all that complicated. And
>> >you did comply, if memory serves, and you were not
>> >booted. So what's the problem?
>>
>> The problem has already been addressed here in the past, and I'm not
>> going to go through it again. Anyone who was around already knows it,
>> and those who weren't can peruse the archives.
>
>You haven't addressed it with me, and I don't recall

Oh, yes, I did. At some length. It's all there in the archives.

>seeing you tell anyone else. You don't hold conversations

You saw enough to put me in your killfile when you couldn't rebut what
I said.

>with people. You just snipe and potshoot here.

I think you have me confused with yourself. Also, unlike you, I try
not to indulge in sophomoric namecalling.

>However, I do have a record of yours and my interchanges

As do I.

>on Fido.....and the TV Antenna Issue was it. And only it.

Wrong.

>And you got personal from the opening shot....it was

Wrong.

>obvious you weren't there to discuss scanners and scanning,
>same as you're not here to discuss scanners and scanning.

Wrong.

>> The fact is that you abused your power, so I obeyed "your rules,"
>
>It wasn't a matter of power. You were MY guest there.

Wrong.

>> I bided my time, and when we met
>> here where you did not have any advantage, I got my side of the story
>> presented, much to your chagrin and frustration.
>
>HA ha ha ha ha ha..... Well if that is true, then present
>it again so that I will be even more frustrated and chagrined.

Nope. Once was enough. Interested parties can look it up. I'm not
wasting the bandwidth.

>> Once it was over, I let it drop; I'm not a vindictive person.
>> The only time I jump on your case is when you do something outrageous.
>
>Oh. I see. Hmmmmm, your track record says different. But

Wrong.

>who cares. I had you on my Shit List for a long time. Maybe

I suggest you put me back in there, then, because you're not drawing
me into a protracted name-calling contest. When you distort the
facts, I may correct you, otherwise I'll just let you carry on your
long-winded and profane tirades.

>I missed something. You sure continue to take your snipes and
>pot shots nowadays, though.

Wrong.

>> I always tell the truth as I see it, Mr. Cheek.
>
>No no no no.....I'm not talking about OPINIONS, man. Not

Yes, you are. I've presented facts, not opinions, in most cases, but
"truth" is almost always subjective in these cases. I admit my
biases, since, unlike you, I don't consider myself omniscient.

>those things that have "color" depending on the eyes. I was
>talking about YOU and ME on FidoNet and the TV Antenna issue.
>There is no "as we see it" there. Just truth.

The truth is that I exposed your errors in several areas.

>Like here. You do not discuss scanners and scanning. You

Wrong.

>participate in slams and off-topic hullabaloos to the exclusion
>of everything else. These are TRUTHS......

>Like......how TV antennas make great scanner beams. THAT is
>a truth. It isn't an opinion.

Wrong.

It's a rule of logic that any gratuitous assertion may be refuted with
an equally gratuitous rebuttal. Almost all of your assertions here
were gratuitous, as usual when you start to pontificate.

I've made my point. This conversation is over.

>with my hands it improves.

New Jeep? Take it back to the dealership and have them fix it.
Old Jeep? See if the antenna is plugged into the radio. If you decide to replace the antenna, go to your local auto parts dealer and buy a replacement antenna. If it doesn't come with installation instructions, ask the persons behind the counter. If they don't know, they should know someone in the area who does.
You might want to try another radio. Check around for a "You-pull-it" parts auto parts yard. You can probably find a radio for 5 to 20 bucks.

>
>I am having some trouble getting the Pro-64 computer programming to work
>and I wonder if anyone can give me some suggestions.

Tonight I tried it without either the 1K resistor between the tip and ring
connections or the connection from the tip to the PC. I had to reset the
scanner, as mentioned in the directions I've seen, and it worked just great!

The short answer seems to be: Not only do you not need the 1K resistor or
the tip connection, it seems to mess things up if you add it. YMMV.

Thanks to all who responded!

THERE IS ABSOLUTELY *NO* COST FOR THIS. PLEASE STRIKE THE DELETE KEY IF YOU HAVE NO INTEREST IN CONTRIBUTING TO THIS PROGRAM.

YOU MUST HAVE A PUBLIC SAFETY SITE TO CONTRIBUTE TO THIS PROGRAM

THE PROGRAM WORKS BECAUSE IT INVOLVES A CONTRIBUTORY EFFORT BY INTTERESTED PARTIES. IT *WILL* BRING TRAFFIC TO YOUR SITE. THE DEGREE OF SUCCESS WILL BE BASED UPON THE EFFORTS OF SUPPORTERS. ***DO NOT LOOSE INTEREST*** THIS PROGRAM IS *VERY* SIMPLE.

****PLEASE READ ON***

Subj: Re: Free Advertising
lllllllllllllllllllllllllllllllllllllllllllllllllllllllllllll
FREE ADVERTISING PROGRAM l
lllllllllllllllllllllllllllllllllllllllllllllllllllllllllllll

Dear Advertiser:

we have visited your web-site, received email from you or were direct to your site by an interested party. Our program takes just several minutes to take advantage of the power of the worldwide web. Whenever you are looking for *FREE ADVERTISING* use our program down below. Good Luck, and remember NO COST.

Kindly,
Tactical Command
TacticalCommand@pemail.net

EXPOSE YOUR URL/WEB SITE TO 3 Million Readers - SEND THIS PAGE TO PUBLIC SAFETY WEBMASTERS.... If 39 Million people agreed to "Listen" To you for 1 minute what would you ask/or tell them??

Everyday , Over 55 Million people are on the I'net. An Estimated 83 Million People Have an E-Mail address....! Now you can Reach up to 3 Million of them easily....FREE. IN Fact Up to 39 Million. Below is a list of five (5) URL's (Web sites/emails). With a 25 word or less Advertisement telling what they offer. Read each; If Interested Reply/Visit.

Then, Place YOUR URL/SITE/E-mail Ad In the Number #5 Spot. Rotate the other Names Upward! (CUT AND PASTE). The URL Ad in Spot #5 will become #4 as You become the New # 5. The Current #4 is moved UPWARD to become #3 etc. - The URL which is listed as #1 is removed from the list. We recommend you take time to email the former #1 Advertiser a copy of the New list so they'll know to start over.

THERE'S NO Obligations - NO MONEY TO SEND- JUST RUN YOUR URL/SITE/Email ADVERTISING = THATS IT!!! WHATEVER You Offer/ Seek will do Greater Business if you are "Exposed" to39 Million Email readers". There is something in this for those of you who do not offer products.... "HITS". "HITS" augment your banner programs by the nature of the reciprocal agreement you probably have.

If 39 Million are ready to see some kind of offer - Ask Millionaires On-line to Invest in your Ideas -
Anything !! Here's how it works out to 39 million email readers.... Put your name/email/URL/Website
Ad (25 words or less) In Space #5 , then Email this FREE ADVERTISING To 100 email Addresses (No
Spamming needed - Answer classified ad's which list an email address, i.e.: "Saw your Ad' Here's how to
get it into the hands of Millions of others....etc. When you send 100 -All 100 will see your Ad - out of
100 readers, 40% (40) are unable to read or comprehend what this is! So of the 60 (30%) -that's 18- They Are Too Lazy to try it, And of the 42 still remaining 20 have Nothing to Advertise or Aren't Mentally Suited
for Business. Or they tried some idea and when it didn't work - they lost confidence in Business
Advertising overall..

That'll Leave 20 People who Place they're FREE AD URL/SITE - and they each email 100 copies.
That's 2000 Readers who see Your Ad in spot Number 4...(20 people Email 100 copies each -
20X 100 =2000 total) Now Grab an Adding Machine and Run the Numbers @ 20% Follow through - By the
time your URL is up to Space #1 . There'll be 39 Million people reading this email message.- Unlike
Money Games' It doesn't matter if someone follows through or not. All WE Want here is A READER To
Visit Our Site/Email us etc. WHY 20% Follow through?

Because There's NO MONEY Involved , NO Need To BUY Anything, NOTHING !!! IT'S simply "FREE ADVERTISING" WE ALL HELP EACH OTHER..no matter what happens-Your URL/Email is Guaranteed to be read/seen by the first 100 who get your email. right ? GET STARTED NOW!

THANKS FOR SPENDING TIME WITH US....

PLEASE TRY AND KEEP YOUR AD LIMITED TO 25 WORDS OR LESS

I second the Austin Spectra...really killer antenna. Pricey, but worth every penny.

Yes, but that is a choice, the results of which
you, Ollie and others have simply self-imposed.
Sort of like self-flagellation, if you will.
Why do it? Duhhhhhh....cuz you like it? You
tell me. Don't make me guess.

> > It's whatever the hell I want to see in it, regardless

> Seem you are well overdue to get back to business Bill.

Maybe. MAybe not. But I and I alone will make that
determination......without assistance. More or less
exactly like you do.....

> > The way I see it is anyone can make of it whatever
> > they want..... and there is no way anyone can force

> ever convince me that the 100's of BS crap posted on here hasn't driven
> away talent.

I didn't say it didn't. But I am saying that "talent"
chose to be driven away. Puredeegolden personal choice.
Probably based on not being able to withstand the heat,
but the more timid sorts might well just have better
things to do with their time.

Me.....it's a hobby. I always did enjoy a good fracas
of one sort or another, from an out and out rumble to
peeing contests. So if that's what folks want to do,

well.....okay, I sure won't run from it. If others do,
well, that's their choice.

> Yes we can all use filters and such but in reality many
> have just said screw it and don't bother to contribute to this
> newsgroup. All the virtual bull crap babble aside that is a fact.

Maybe. But even at its best, there would be some to choose
to go elsewhere. If everyone hugged, kissed, and loved up
on each other, I'd probably hit the trail. <Gack.>

> > He ALWAYS has the choice. But
> > he piped in as a "poor ol' victim"....like he'd bent

So what do you see? Him as being in full control?
Are you in full control? Does Petie Breath force
himself upon you and relieve you of your goodies?

> > Rubbish! It's that way only if YOU want it that way.

> going dance with Mackey cause you to froth at the mouth. You could have
> just ignored it but those comments always send you off on your virtual
> sermon.

How's come you don't ignore Peter Breath Boe? Why
ignore dung? It still stinks....so you may as well
shovel it up and pitch it into the cesspool, and hose
the spot down.

> > He could have observed that just as easily as
> > the opposite extreme that he noted.

> He could have if he was a moron.

If? How do you know he wasn't?

> It was far better before Mackey showed
> up which is directly related to you showing up.

Ummmmmm nooooooo......it was another feller who really
sounded my calling......but we'll not argue the point,
fellers being fellers and all......

> You remove the noise and
> the level of meaningful posts will rise,

THAT is not a foregone conclusion. People CAN control
the noise. People can choose not to be victimized.
And even if it was all huggy-kissy-smoochie, you'd have
a hundred times more dumb cellular hack questions and
not a heck of a lot more contributions. Maybe SOME more,
but not a LOT more. A different kind of "noise" will
arise....."How do I mod my SnakeBite 760YMU for
cellular?"

And then when the 167th one of those in a week comes
in and gets ignored, then the sicko will get pissed at
the "talent" he perceives as having ignored him, and
a whole new war will commence.

It is a vicious circle, perpetuated by Mackey, Boe,
Hamptom, and their ilk.....the likes of whom outnumber
the chiggers in a blackberry patch. If it ain't one
thing, it will be another. You ought to know that.

> or it certainly seems that way
> to me. I would be more than happy to be proven wrong but it isn't going
> to happen. Only a fool or an idiot would argue that 100's of off topic
> messages help improve the quality and number of participants of this
> newsgroup.

They don't improve or degrade. At least not to the
enlightened participants who come here for what they
want and perhaps to give a little.

> > There is no REALITY here, my friend,.....other than
> > the reality that we CHOOSE to create.

> What cyber-babble Bill. Give it up.

I'm not accusing you of babbling.....though I could.
Why are you drifting off on that tangent? Why don't
you argue or explain how this virtuality is as real
as the hemmorhoids you're sitting on? Or some other
reality that is about as real as blue sky, chilled beer,
and peanut butter sandwiches?

It isn't babble. You may choose not to agree, and if
so, then offer some tangible shred of evidence of this
forum being a reality. Begin with researching the defintions
of the words, both in Websters as well as in the cyber
glossaries. Then tell me why I'm wrong. If I'm wrong.

> > Me....I like to please a lot of people, so I go betwixt

> Mackey battles. It is your reality that seems disconnected from the
> rest. You must really feel good showing up an idiot like him day after
> day after day after day after day and then twice on other
> days.

No, I just feel good each morning waking up knowing that
I ain't him.

What's the difference, anyway, with you and Peter Breath Boe?
You sure seem to get off porking him every chance you get.
Is this a deal where it's okay for you and not for me?

> > Then I post stuff about scanners and answer questions
> > on 'em. I'm happy. You're happy. Everyone's happy.
> > Nobody gets left out.

> yawn

Ahhhhh, I see. So you DON'T like scanners and scanning?
At least those topics bore you, eh? I mean...YOU don't
talk scanners and scanning a whole lot. Not at all,
actually......though you certainly have more exceptions
than Mackey and Boe. Those two popinjays NEVER talk
the topic while you hardly ever do. It's a matter of
degree, but not by a hell of a lot.

> > Even Ollie......fer example.....he even observed right
> > off that he was going to get hosed. Do YOU ever do that?

> When it involves posts that have any connection to you that aren't
> praise I can say
> I would normally bet on you posting a similar response as you did to
> Ollie. You are very predictable in that sense Bill.

Predictable? <Shrug> If so, then it ought to be worth
some money to you on a bet with some sucker. Take
advantage of it. If you can.

I won a fortune in poker some years ago....from people
who thought I was predictable. No matter. Just consider
that it doesn't count for much my being "predictable" here
and now. If it were to ever COUNT, let me know and I'll
mend my ways.

> > I don't. I don't think you do. Why not? Because it is

> > you over and help theirself. They guy WANTED a hosing, see?
> > Else, he'd have just made his point, if he had one......

> Well some of us got and understood his point others including you
> didn't.

You are as much 'fessing up that you PICKED and CHOSE
the points you picked up. But you can't legitimately do

that. A guy writes something, and you gotta take it all
into account. The WHOLE picture. You can't pick and
choose and have any reasonable hope of being correct.....

> Maybe your mind is too intent on looking at things as if they
> are all bent over. I dunno, it does seem to be a popular theme of yours
> lately.

Do you want a different one? Show me. Show me a
different one in how you treat Peter Breath Boe.
Examples are louder than words. Show me.

> > See, the problem is that people can't understand a world

> exhibit in public.

There is NO "behavior" in these virtual forums. "Behavior"
is an item of action. There is NO action here. And what
there is, period, is totally and 100% *perceived*. It is
not in any sense of the imagination.....real. Tell me how
it can be.

> > Read good ol' Ollie's post again, word for word, and

> Have you considered putting all this in a FAQ? In the future you could
> just post the FAQ. I've seen this line from you so often it would save
> you lots of time. Again, you see Ollie in a different light than I do.

I don't "see" Ollie. All I saw were words attributable to
him, and I read every word he wrote....individually and
in summation.

A FAQ? Hmmmmm. That may be a good idea....*if*....people
read FAQs. There is plenty of evidence, however, that
people don't read much. So I dunno. I'll dwell on it.

> > The main difference, however, is that dogs can't choose
> > whereas people can. Like you, ferinstance....you can
> > tell people to eat your shorts.....or offer to eat theirs.
> > Or....express a disgust for shorts in the diet, period.

> sake but that is it.

"Once in a while?" You're kidding? There are 21 posts
from you in my recent queue, three of which are remotely
on topic. The rest are to, about, or connected with
Mackey and Boe. How do you explain "once in a while"?

> > Me, I like anchovies on my pizza...
> >
> > <shrug>
> >
> > It's always a matter of choice here in "virtuality".

> Cyber-babble Bill. All of life is choice sooner or later.

There you go with the "babble" again. It isn't.
Not....unless.....you can't understand what I'm
talking about...in which case we have a problem
either of your lack of comprehension or my lack
of clear expression. Which is it?

> > Tell me it ain't.
>
> Why? That burning desire you have to argue and show all what you are
> made of? Most all of us know Bill. We have seen and heard it from you a
> million times. No thanks, no more today for me. Go play with Mackey, we
> are through here I think.

Wow. Wild. Crazy. Far out. I take it you don't
like me anymore?

That is utterly amazing......staggers the farthest-fetched
imagination.

We? Babble? Million times? Made of?

Throughout your entire series of posts, you have
continually injected little personalisms, adjectives
that were not initially fired at you, and you've
methodically avoided hitting the nail on the head,
in terms of the subjects discussed.

Why? I didn't do it to you. So what elicited
it other than your 'disagreement'? I don't understand.
The "million times" crap can be simplified to me
mentioning several dozen times that Mackey is a
hermaphrodite. Did this somehow get around to where
you thought I called you one?

I don't recollect it, if I did. I don't feel I
accused you of "babbling". So why take a perfectly
good argument down to a personal nature? Why
dismiss the points I made or tried to make?

You want scanners and scanning talked about here?
Show me. You are capable of talking radio. You
are capable of answering a lot of the newbies'

questions. You are capable of talking higher level
stuff, from computer interfacing to digital decoding
to satellite reception.

But you don't.

Don't task me until you've either corrected or
at least explained your own failings. That's
only reasonable and fair.

> Any suggestions for obtaining IC data sheets from Uniden?

Not data sheets for IC's no. But get whatever
service manual you can....it shows the IC's,
and from there, you can get the datasheets
from the manufacturer of the chips.

That would be about the only way, really,
though there are a number of variations on
the theme. You get the idea, though.

Because the PRO-90 is a superior receiver using triple conversion.
Your 200XLT is receiving image frequencies which are a by-product
of the receive process and especially troublesome on most double
conversion units. Triple conversion helps to eliminate these
false signals and their annoyances.

There really isn't much to update, so it isn't all that hard to figure
out.

The FCC licenses belong to the team (holding company), not the driver,
simply follow the equipment. For example, when Brett Bodine bought the
#11 team from Junior Johnson, the radio gear went with it, same thing
with the #7. The #25 became the #50, so the freqs will stay the same.
For Steve Park, look for the #14 from 1997, this is much of the same
equipment, now with a different number. I'll bet that the 97 team has
the same radios as the old 97 team, even though they are considered a
"new" team by NASCAR.

For Sterling Marlin, look for the #40, since it is still owned by the
same company (Sabco), it'll have the same freqs with a different driver.

The only real tough ones are the truly new teams, such as the 26, 35,
13, etc... Ask at the track for these or on the net for the specific
car you are looking for. <G>

Or you can buy used.

> ? A price not exceeding (by much) $600.00

That should be easy to do. Have you checked Bandercom pricing?
Their latest posting at http://www.bander.com/export/exscan.htm :

AOR Receivers
AOR AR-8000 0.5 - 1900 MHz, 1000 ch US$425
AOR AR-8000M scout/birdiemod/US band plan/case US$499
WELZ
Welz WS-1000 0.5-1300 MHz, Full coverage. US$319
Welz WS-2000 0.5-1300 MHz, Full coverage. US$349
ICOM
Icom IC-R10 No Block version, handheld US$425
Icom PCR-1000 PC Card receiver US$529
ALINCO
Alinco DJ-X10 Wideband sca with 110V drop in charger US$425
UNIDEN
UBC-220 "AMPS" 30 kHz step on cellular band US$249
UBC-3000XLT 25/1300 MHz, no-block 800 MHz. 5 kHz s US$279
UBC-3000 "AMPS" modified to have 30 kHz step US$329
YUPITERU
MVT-7100 0.530-1650 MHz, 1000 ch. Full coverage US$305
MVT-9000 0.530-2039 MHz, 1000 ch, Full coverage US$499

MVT-9000M 33% higher scan/search, Bleed-mod plus US$559

> ? A unit I can use to decode WEFAX, POCSAG, and other such transmissions
> into my home PC. (apparently I need to find a unfiltered DC-coupled
> discriminator-output MOD for my scanner before I can decode such
> information)

You will want to check into available modifications for the radios
which you are considering. You might also want to take a look into
the WiNRADiO Digital Suite package. WiNRADiO plus Digital Suite
will run you about $565 from Advanced Digital System which is
where I purchased mine.

> ? A scanner that is not going to be limited in what it can do straight

> and is it still considered the best scanner? I believe it was available
> when I bought my Uniden 4 years ago. Are there other scanners that have
> come out by other companies that can match or beat the AR8000?

Match or beat it in what aspects? It has a great receiver in it and
recent version have fixed some of its earlier shortcomings. It is
highly flexible but also quite complicated due to its programming
syntax as well as sheer number of features.

> Are there
> any scanners other than the AR8000 that can reaction tune?

The Reaction Tune feature supports the AR8000 and CI-V protocols
which means any of the CI-V iCOM radios such as the R10. The older
AR2700 also supports Reaction Tune but I would not recommend this
radio for your purposes.

> What about in the near future?
> I really don't have a favorite band to listen to, basically if it is
> there I will listen to it whether that is the local mall, an air show or
> some 800 Mhz activity to top off a night. I also bring the scanner with
> me when traveling by plane or ship, so a near field tuner or reaction
> tuner would be great to pick up local frequencies I could otherwise
> miss.

Then it seems you are to choose between the AR8000 and R10.

> I have had some interest in the WinRadio and PCR-1000 units. Both of
> these units would be great from what I have read so far, but I am not
> ready to invest in a laptop to connect them to for portable use. I
> believe a handheld would really be my best choice now. But they sure are
> tempting!

WiNRADiO won't work with a laptop. You'll need a "full-blown" PC with ISA. For the IC-PCR1000, a laptop is fine using the serial port but you'll need to supply power to the receiver. More mobile than the WiNRADiO but still limited to finding a power source or carrying some form of battery/gel cell.

> There are just so many options available, and I have no way of actually
> seeing any of these units or trying them before I purchase them. So
> basically if I gave you $600.00 what would you buy as the best
> combination of a scanner and a Near field Receiver (like the scout, or
> R11).

You seem to have done your homework, which is good. But for your requirements of mobility and signal detection/interception, the AOR AR8000 and iCOM IC-R10 seem to be your only choices since they are handheld and support Reaction Tune.

If you would like more info on either the AR8000 or R10, I have written reviews of both which are at my web site. If interested, go to my home page below, follow the radio monitoring link, page down to my table of receivers.

You can get the AR8000 from an exporter, or go with the US made, cellular-blocked AR8000B. You can get the IC-R10 in either export or domestic versions.

Good luck with your decision!

Strong signals,

It most likely is a Regency MX-7000, mfg by AOR. I bought mine back in 1985, am still happy with it, and will probably never sell it. By today's standards, it's a really slow scanner at only 7 channels/sec out-of-the-box. A simple mod brings it up to about 10 ch/sec. Also, memory is only 20 channels. The '7000 really shines when it comes to selectivity, sensitivity and image-rejection. It's the only radio I own that I can listen to the 900MHz trunked systems clearly, where active frequencies are sandwiched together every 12.5 kHz. The only drawback is that it takes some patience to learn how to program; it's not quite as intuitive as a typical Uniden unit.

One plus about the design of the unit. I accidentally left mine outside in a torrential rainstorm once, but the inside was relatively dry.

Source record: 167248

Public Memorial services for Los Angeles City Fire Captain Joseph Dupee will be held this Saturday, March 14th in the South-Central area of Los Angeles.

Preliminary news reports of the fire that took Captain Dupee's life may be found at the LAFD website: http://www.lafd.org

Members of the Public and uniformed Firefighters who are NOT driving emergency apparatus are to report no later that 8:00 AM Saturday morning to the schoolyard near the intersection of 77TH Street and Vermont Avenue where they will assemble to march in a procession. This assembly point for the Public and Firefighters NOT driving apparatus, can best be accessed by exiting Highway 110 (the Harbor Freeway), at Manchester Avenue and heading west to Hoover Street. Turn right, traveling North to 77TH Street and turn West (left) to the schoolyard entrance. (Thomas Bros. map page 704 coordinates A-1). Though there will be supervised parking, we do encourage carpooling.

These members of the public and uniformed Firefighters who are NOT assigned to drive emergency apparatus will be shuttled from the schoolyard to the nearby intersection of Vermont and Florence. At Vermont and Florence, they will assemble to march in a procession back to nearby Fire Station 57, Captain Dupee's last assignment, where brief ceremonies will take place. After these brief LAFD ceremonies, those gathered will walk across the street to attend a public ceremony at the Crenshaw Christian Center (commonly referred to as "The Faith Dome"). The indoor facility can seat up to 10,000 persons. This public ceremony will begin at 10:30 AM and end at 12 Noon.

These are the only PUBLIC events planned for Captain Dupee. Other services as well as committal are characterized as private at this time. Members of the Los Angeles Fire Department should refer to upcoming administrative teletypes for further information.

Agencies that will participate with emergency apparatus are asked to closely follow these directions. The assembly point for apparatus only, is the MTA bus facility at the intersection of 54TH and Arlington (Thomas Bros Map 673 G-5). The yard will open at 6AM. We encourage early arrival to allow for a 7:30 AM assembly of apparatus. Departure will be at 8:30 AM sharp. The procession will proceed east along Slauson Avenue, turn south on Western, turn east again on Florence to Vermont. At this location, Engine 57, carrying the body of Captain Dupee will proceed slowly southward on Vermont to Fire Station 57. Those uniformed Firefighters and members of the Public who earlier assembled will follow the casket. The marching Firefighters and walking citizens will themselves be followed by the procession of emergency apparatus. Detailed written instructions will be

handed to apparatus drivers on arrival at the MTA yard at 54TH and Arlington. Agency representatives that desire further information may call our Chief of Staff directly at (213) 485-6002. Once again, for PUBLIC SAFETY AGENCY COORDINATORS OF REPRESENTED AGENCIES ONLY, please call the LAFD Chief of Staff at (213) 485-6002 if you are in need of further information or to finalize details of your agency participation that morning.

The latest memorial service information can be obtained by calling our special information hotline at (213) 485-2337.

In lieu of flowers, the Dupee family has kindly asked that donations be made to a special fund established to support his children. There is also a separate address where messages of condolence are warmly welcomed.

Donations may be sent to the:

Dupee Children's Fund
Los Angeles Firemen's Credit Union
P.O. Box 60890
Los Angeles, CA 90060 USA

The hand-written notes to his family have been especially welcome, and no doubt will remain touching in the difficult years ahead. Personal cards, letters and notes to Mrs. Dupee and her children may be sent by way of our benevolence society at:

Los Angeles Firemen's Relief Association
2900 West Temple Street
Los Angeles, CA 90026 USA

Thank you for your support of our men and women during this difficult time.

Please no e-mail regarding this notice (my box is already overflowing). Rather than tapping out an e-mail or posting a message here, please direct your condolences to the address above.

Thought i'd toss my 2 cents in....
I too like the unit. I asked G&G Communications (Gerry) and he agreed
that it was a good unit. He did caution that the keypad is overly
delicate and they may be hard to get replacements.
Best Regards,
Ray Miller N2NJK

I have a Startek freq counter for about 8 years now. They seem to be reliable. The only problem that I have had is when I forst got it, I overloaded the input and burnt out something. They repaired it under warranty. I have been very happy with the performance. They are not as popular as the Opti type but probably less expensive too.

Don't forget about Kansas City fire Department and the wonderful EDACS system, no talk around capability IE direct comms., a great idea when a team in a burning building cannot talk to each other direct. KC fires chief has now bought CB's for the fire units to use, I understand they can now talk to one another in burning buildings.

"glenn" <corbo_99@yahoo.com> asked:
> ... Can some one send me a list of some mobile phone frequencies.

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Mobile Telephone [22.501]

VHF - 30 kHz spacing UHF - 25 kHz spacing

Base: 152.030 - 152.210 RCC 454.025 - 454.350 RCC
152.510 - 152.810 telco 454.375 - 454.650 telco
Mobile: 157.770 - 158.070 telco 459.025 - 459.350 RCC
158.490 - 158.670 RCC 459.375 - 459.650 telco

Transmissions are FM. Many of these channels may now be used
for paging, specifically 152.78, which is a nationwide page.

>ones cannot be? Any suggestions on a good phone? Thanks!!

IMHO regular digital should be enough to stop the casual eavesdropper.
Another form of relatively cheap 'security' would be speech inversion. From
there you can move up to DSS, encryption, or best of all just using a corded
phone :)

1459. Info and Mods on the BC3000XLT

Newsgroup: rec.radio.scanner
Date: 1998-03-12 00:00:00 UTC
From: epattis@uvi.edu
Message-ID: <epattis-1203981527220001@voyager.uvi.edu>
Source record: 167257

Hi everyone!
I just got myself a BC3000XLT handheld scanner. So far I have been
really impressed with it and I am enjoying it immensely. I am interested
in learning more about it... specifically on its performance in certain
areas. What antennas are found to work the best? I know that at least
one company had (before legislation) offered mods for unblocking it to get
full range freq coverage. How is this done and can I or anyone these days
do this? I know the European model is unblocked "UBC3000XLT". Any
BC3000XLT users out there who want to compare notes?
Thanks!

Hi All

Is anyone aware or can anyone point me in the direction of someone who can tell
me the codes that control an AOR 3000A when used remotely from a pc..the owners manual gives a few codes i.e. how to store a frequency at a given memory
address using a terminal emulation program but the manual does not tell how to do a search between two freq's..or rather it does not show the command to do this.

I'm tearing my hair out with this so I would really appreciate any help you all could give me.

Cliff.

GOODYEAR BLIMP FREQUENCIES
--------------------------

By John (Topol) Johnson KWV8BP

Source: Monitoring Times

Here are a few frequencies you might want to monitor if you ever see one
of the Goodyear Blimps fly overhead. A couple quick notes first, there are
three Blimps in operation in North America a fourth is operated in Europe.
The American blimps are stationed at three locations, one on each coast
and one in-between. The Enterprise, tail number N1A, is based in Pompano
Beach, Florida: the America, tail number N3A, is based near Houston, Texas
and the Columbia, tail number N4A, is based in Los Angeles.
Each blimp is accompanied by a three vehicle ground fleet consisting of a
van, a tractor-trailer, and a Greyhound-like bus.

The communications between the blimp and ground crew are normally held on
151.625 Mhz. The blimp also uses VHF aircraft band, communications can be
monitored here at 132.00 Mhz. AM. Below is a list of other frequencies used
by the blimp.

123.050 Common Blimp port frequency
```

123.250 Suffield (Ohio) Wingfoot Lake Facility

132.000 Goodyear Tire & Rubber Company channel

151.625 Blimp Operations NBFM

465.9125 Blimp Operations NBFM - Low Power

465.9375 Blimp Operations NBFM - Low Power

465.9625 Blimp Operations NBFM - Low Power

This file was brought to you by John Johnson KWV8BP of The Hotline,

The America blimp is no longer based in Houston. It was moved
north several years ago. I thought that it was now based in
the Ohio area...

>

The Communications Act of 1934 as you recall it is *history*. Gone
forever. When HR2369 becomes law, the Act will change from a law
which enumerated what you _couldn't_ do with a receiver to one which
enumerates what you _can_ do with a receiver. The law states you
cannot "intercept *or* divulge" radio signals, with a list of
exceptions. The act of interception -- by itself -- is now illegal.

Fortunately, the exceptions include most of what a so-called "legit"
scannist would listen to. Unfortunately, it's not all that big a
list, and could be shortened without much trouble.

Meanwhile, those of us who *have* to use cell phones have no more
assurance of privacy than before -- in fact, even less than before,
since CTIA will point to this law when asked why cell phones in the
US are _still_ unencrypted.

Don't feel so hopeless. This could be fought in court. Nailing a
democrat was the best thing that could happen to us. Let the central
planning types discover what taking away freedom results in.

In time I believe that this will reverse.

Regarding the subject line, I felt he picked it to attract attention or possibly to fool the idiot cancel freak. I think you misunderstood me Bill. If you really want to get into interpreting it I would have to say he meant for one to drop to their knees. I don't see how you interpret that as somebody offering to bend over for you or be a victim.

> > BTW, I said your virtual reality spiel is cyber-babble. Bullstuff. If

Ever heard the term Psycho-babble in relation to psychology and some of their BS reasoning and terms. I bet you can figure it out.

> I haven't encountered the term before. So it sounds like
> your statement of "computer babble" to me....a definite
> slam. Duh........

Read the above again. Yes, I guess you could say I slammed your "virtual reality spiel". I am not as articulate as you Bill. I am for loss of any other way to put it. Spiel, stand, sermon or what ever. The statement you have made many times concerning virtual reality. Spiel for loss of words. Sorry if I offended you with the word spiel.

> And..... "spiel"?

above

> Lordy, you'd howl to a half-dozen different deities for
> my ass on a skewer if I slammed you.........

Now that is babble Bill. When and what deities have I howled to about you. Are you reaching or what? Talk about victims! I have gone to bat for you on different issues and disagreed on a few, but I don't recall going to the deities about you. That seems pretty cheap Bill.

> I've been
> real careful to pick my adjectives, adverbs, and nouns.
> You're either not very careful, or.....very careful, too.

1482. MR 8100

Newsgroup: rec.radio.scanner
Date: 1998-03-12 00:00:00 UTC
From: jhiott <jhiott@worldnet.att.net>
Message-ID: <6eae3f$st8@bgtnsc02.worldnet.att.net>
Source record: 167280

Came by a Uniden MR 8100 w/speaker and docs - thought about selling it to get something else. What's a fair price for this scanner?
Haven't seen a lot for sale to get an idea.

Thanks
Jeff

please email me at jhiott@worldnet.att.net

Multiplying the samples by -1 would only invert the AMPLITUDE not the frequency. It would sound identical to the original signal... You have to convert the samples to the frequency domain, invert the frequencies, then convert back to the time domain and play it back. Not quite as easy as you mentioned, but it is still not very difficult to do.

If you consider of your eavesdropping hobby (scanning phone calls) in the same sense as peering in your neighbor's window with a pair of binoculars (an act of being a "Peeping Tom"), then hopefully you'll realize your voyeurism is not healthy and may be an indication of some deeply rooted problem.

Our Congress is doing exactly what I pay them to do. It's just a pity that the Electronics Privacy Act isn't enforceable.

Jeff KH2PZ

P.S. Say Greg, you didn't happen to appear in that QualCom commercial - you know the one - the midgets are hiding in a cafe trying to scan some fellow's phone call.

>Can anyone tell me if Motorola makes a handheld scanner for public use?

Motorola doesn't make a scanner. What you probably have seen is the "Minitor" which is a pager that is able to receive audio on a single frequency. It is popular with volunteer fire departments which can use it in the pager mode to receive their alarms or may put it in the monitor mode to receive the traffic on the channel. The minitor is available on the surplus market in the $100-$150 range depending on condition. There are several places on the WEB where the Minitor is sold. Just put "Minitor" in the search string of a search engine and several will come up.

Hello. Flight For Life (as it is called) runs a coupla different Copters. One based out of Milwaukee Regional Med. Complex In Tosa and one outta McHenry County in ILL. I hear them mostly relaying patient info on 129.275. I have heard them a couple of times talking on Mitchell Field App/Dep Frequencies. Also give a listen to Firecom (154.295). But like the State Patrol, Flight 4 Life can communicate on just about any frequency. Any more questions just let me know. Or you can visit my Wisconsin Scanning HomePage. (http://www.geocities.com/CapeCanaveral/lab/7646/index.html)

Let me know,

Tim

>
> ......Natas@erols,com or Jerry S.

Do it! It works great. When you built the circuit, dump r-2 and r-3 and
tie pin 3
of the 741opamp to ground. Make sure the output--pin 6 of the 741opamp
goes to CTS.
I don't know about any of your scanners except the pro-37.
If you remove the backcover, inside on the circuit board next to where
the squelch
cable plugs in is a metal post(tp103), which is the discriminator
output.
The metal frame on top where the volume and squelch is makes a good
ground.
You can use alligator clips to attach it, I use my pro2006 for data,
since it was
so easy to install external jacks. If you find a good place on the 37 to
mount a jack
I'd like too hear it. I guess you could just run a cable out through the
battery door
or the side of the case...
I have found police mdt transmissions in the 470mhz and 850mhz range
here where I live.
I also have a few taxi services in the 850mhz range..although I suspect
they could be found anywhere.

Anyway..do it! It should take no more then an hour or so to build, and is well worth it.
The parts are less then $10 at radioshit, and as a bonus you can download pd-204.zip
from anywhere and decode pocsag (pagers) and such. Trunker and mobitex are also good
programs to use with the interface.
While you are at it, there are tons of soundblaster programs you can pump the discriminator output into to decode many popular digital formats.

The guy actually using the cellular phone was talking on it while parked at a
restaurant, while his family was inside. In other words, he was a stationary
target. In other words, he was probably just intercepted via one cell site, on one
cellular channel.

> 2) You're doing this from a moving vehicle. In 20 minutes you've move through
> the coverage area of several cells. What's the range of a cell to a hand held
> scanner...inside a moving vehicle?

It doesn't take a genius to realize that if you found traffic interesting enough
to record, you might also decide to pull off the road & stop to pay more attention
to it.

> What do you think?

I think you're a little late with the conspiracy theory! This stuff was
all discussed here right after it hit the news.

The story does sound a little suspicious, with the 'explanation' by the two
people being pretty dumb & hard to believe. But because the people themselves
seemed pretty dumb, their stories could be plausible.

I'm in whole-hearted agreement with that statement. Privacy is the
responsibility of the transmitting party. If there's concern that
the wireline party may not know their conversation is vunerable,
require cell-phone carriers who run voice analog and in the clear
to provide a 'beep' on the wireline side, similar to what is provided
with many phone recording devices...

hurst_m@hotmail.com wrote:
: Some people argue that conversations on cellular radios should be no more
: private than any other radio communications. Historically, radio has been
: considered a public medium while telephone lines have been considered private.
: If someone broadcasts a message thorgh an unprivate medium and then through a
: private one, the communication would not have an expectation of privacy. The
: same rules should apply to cell-phones. The Communications Act of 1934, which
: prohibites wiretapping, does not prohibit listening to radio signals simply
: because they were also sent through a telephone line. Listening to
: cell-phones is only illegal due to the influence of the CTIA with legialstion

I too am looking to tap this output on my BC220XLT.
Tonight I found this information
http://w5gb.nmsu.edu/kc5kto/mods/baseband.txt
which tells what chips different radios use. Of course the 220 is not listed... but I'd say there is a fair chance that it shares the same chip that one of the listed Unidens or Radio Shack scanners use.

I just pulled the scanner apart here and was poking around for this chip but have not seen it. I am looking for a regular IC with a name such as "TK-10420" printed on it right? I see that most of the chips listed in the above link work off pin 16. Granted it is late here and I should look again in the morning, but I only see 2 IC's that will be large enough.

One is on the main board next to a big orange cube. The chip is labeled "mc33618d" "xac405" 16 pins.
The other is mounted on a secondary PC board above the main board. The chip has a metal canister type crystal laying on top of it. The chip is labeled "sm5158ap" 16 pins.
One other IC is directly behind "sm5158ap". This one is only an 8 pin and is labeled "tlc271cp"

The "mc33618d" seems to be the closest to a name match with the chips listed at the above link. Does anyone know for sure, what the pin layout is, or if there is an updated list like the above that contains newer radios?

One big problem:Radio Shack's base unit is NOT the same as the bc-895(the
base Uniden unit).
In fact, Radio Shack's base TT is actually a repackaged PRO-90!
This is, of course the Uniden BC-235 hand-held TT.
So unless a RS-232 mod is figured out for the PRO-90/BC-235, the
owner's of the base R.S. unit are out of luck.

: We'll have to ask Bill Cheek if he's got plans for that mod... :)

Doubtful, but if anyone can figure it out Bill Cheek can.

For someone who claims to have been a cop for 5 years, it sounds like you discoverd turdville and decided to move in. Perhaps you have forgotten, via the bullshit reasons to make the traffic stop comes the opportunity to arrest someone on outstanding warrants, stolen property, weapons, or narcotics offenses.

As for the insurance violation--I take it serious. Have you ever paid for auto insurance and wonder why it is so high? Have you ever been hit by an uninsured motorist, or one whose d.l. is suspended or expired so the insurance companny did not pay the claim since it was an unlicensed driver operating the motor vehicle? Anyone who injures another or their property and can not pay for their actions are criminals to me.

And as for dunkin doughnuts, could you please get some original material--like we have not heard quite enough concerning this stereotype.

Perhaps you were the type of cop that did not look beyond the end of your nose and just issued "good" citations and went 10-8. Or perhaps you are no longer a cop because you were complaisant or incompetent.

If what you refer to is harrassing I'm going to keep on harrassing, so stay out of my jurisdiction I don't want to upset you with my bullshit reasons.

P.S. Quit cross posting you whiner.

Cross-posted to: rec.radio.amateur.space,rec.radio.scanner

Hello,

I am using a scanner and my soundcard to decode pictures from the NOAA polar orbiters and in the tradition of my hopelessly poor methods I would like to try to build a turnstyle antenna, or maybe even a quadrifilar... but I think I wanna go with a turnstyle first until I have better materials. Anyone have sufficient data for radial lengths and separation distances, loading (if any), wiring, etc. for a simple 137 MHZ turnstyle? I built a simple twisted loop antenna and it seems to work -ok- but for my current residence I need better gain and I like the turnstyle idea the best.

Thanks in advance for any help you guys can offer!

, Rick

Source record: 167376

rds is a data service carried on the subcarrier of an fm station.
it has station info emergency info and other data carried on it.
there are a few stations that have it in the U.S.
and it is really big in The U.K.
I was able to find software to decode this from www.leo.
org/~lorenzc/rrds/
but cannot find interface schematics.
can one take the audio from the fm reciver, demod the subcarrier using
a SW reciver tuning below 100khz then take the audio from there and feed
it
thru a data slicer (ie. hammcom/pocsag interface) to decode it with a
computer and software?

any hardware/software information anyone might have
would be a great help..

Thanks

I think it's all moot, now. The Communications Act of 1934, the original
"sunshine" law, is effectively f**cked. Instead of enumerating what you
cannot do with a radio, it now enumerates what you _can_ do. At this
point, there's nothing that can be done about it. The time for wondering
about that "amazing coincidence" is long past.

See this site:

http://exo.com/~rbarron/earth.html

Or the mother-lode of info:

http://x8.dejanews.com/getdoc.xp?AN=180708203&CONTEXT=889691600.827850793&hitnum=2

These are the remote seismograph telemetry links. You can
actually "listen" to the seismographs.

Scan through the 160-172MHz (or UHF 406-440MHz) range and listen
for steady, continuous tones at about 1-2KHz, sent at low
modulation levels (NBFM).

This is best done late at night when two-way traffic and intermod
is at it's lowest. Don't confuse them with trunking or pager
tones.

The tones will frequency-modualte a few Hz with movement.
Otherwise, listening to them is rather boring. You could rig up a
circuit to detect any change in the frequency (a nice programming
exercise).

Good Luck!

Nice thought, but keep dreaming. There's no constitutional
clause regarding radio usage -- the (former) Communications
Act is more like a "sunshine" law that requires public meetings
to be open.

Nope, we'll have to wait until Congress starts discussing
campaign finance reform before anything could possibly happen.
I don't expect to live to see it.

Newsgroup: rec.radio.scanner
Date: 1998-03-12 00:00:00 UTC
From: keef@tamu.edu
Message-ID: <35089d8c.35803330@news.tamu.edu>
Source record: 167381

Radio Shack Pro 62
Price = $99.00 (includes shipping by 3-day Priority Mail through the Post Office).

I have had this scanner since last August and used it very little. The scanner comes "bare" without any accessories. It does have an original antenna.

All Specifications are available at:
http://support.tandy.com/support_electronics/16620.htm
The instructions for operation are also available on the TANDY web site.

Prepayment by check or money order is preferred.
I can also send this by COD through the post office.
Email me at keef@tamu.edu with any questions.
Thanks,
-Brad Keef
---

200 channel, hand-held, programmable scanner, very good condition.
All Specifications are available at:

1528. For Sale: Radio Shack Pro 29, $65

Newsgroup: rec.radio.scanner
Date: 1998-03-12 00:00:00 UTC
From: keef@tamu.edu
Message-ID: <350b9e6f.36030468@news.tamu.edu>
Source record: 167382

Radio Shack Pro 29
Price = $65.00 (includes shipping by Priority Mail through the Post Office).

I have had this scanner since last August and used it very little. The scanner comes "bare" without any accessories. It does have an original antenna.

All Specifications are available at:
http://support.tandy.com/support_electronics/19700.htm
The instructions for operation are also available on the TANDY web site.

Prepayment by check or money order is preferred.
I can also send this by COD through the post office.
Email me at keef@tamu.edu with any questions.
Thanks,
-Brad Keef
---

60 channel, hand-held, programmable scanner, very good condition.
All Specifications are available at:
http://support.tandy.com/support_electronics/19700.htm

Features:
Frequency Search
Six Channel-Storage Banks (10 Channels per bank)
Monitor Memories
Two-Second Automatic Scan Delay
Memory Backup
Lock-Out Function
Priority Channel
Weather Bank Key
Display Backlight
Search Skip

Frequency Bands:
29-29.7 MHz (10-Meter Amateur Radio)
29.7-50 MHz (VHF Lo)
50-54 MHz (6-Meter Amateur Radio)
108-136.975 MHz (Aircraft)
137-144 MHz (Government)
144-148 MHz (2-Meter Amateur Radio)
148-174 MHz (VHF Hi)
406-420 MHz (Government)
420-450 (70-cm Amateur Radio)

450-470 MHz (UHF Standard)
470-512 MHz (UHF "T" Band)
806-823.9375 MHz (Public Service)
851-868.9375 MHz (UHF Hi)
896.1125-956 MHz (UHF Hi)

The scanner is preprogrammed with these weather service channels:
162.400 MHz (NFM)
162.425 MHz (NFM)
162.450 MHz (NFM)
162.475 MHz (NFM)
162.500 MHz (NFM)
162.525 MHz (NFM)
162.550 MHz (NFM)

I saw the movie "US MARSHALS" last week and boy was I excited when they showed the opto-scout freq. counter in action. If you have nothing better to do, watch the movie, it's not a bad sequel. I did like the first movie with Harrison Ford better, both very predictable. I also enjoyed one of the newer James Bond or was it Mission Impossible, or The Saint?, movies that had the Alpine CD deck turn into a fax machine. I have the same identical deck in my car but I dont know if anyone has a Mod for external fax capabilities (j/k). Anyone else see any movies with cool gadgets? (involving wireless communication equipment of course ;)) Is anyone else a gizmo freak like I am?
fx1
BTW, just got my new Welz2000, anyone else a proud owner of one? E-mail me I'd like to share some experiences, I am dedicating a web page to my baby scanner.

No jay. the audio portion of nascar is on the 460 MHz area. As a matter of fact if you check out Speedworld.Net you might be able to find the new frequency lists.If you can't find it there just e-mail me and I will give you what I have. And by the way, If you want to continue to goto the nascar, I suggest you get a RS 50 channel handheld scanner, instead of renting one evertime for $140. Only $99 plus headphones.. C U Later Jay.

>rebate. Usually this means that they are getting ready
>to introduce a newer product. Has anyone heard anything?

The R10 is a relatively new radio. No replacement in the shadows.

The rebate was to blow out stock for the end of the fiscal year at the end of March. There are $$$ advantages to having a low inventory when you end/start fiscal years.

ICOM also is trying to pump sales figures for various reasons. They have been leaning on dealers pretty hard to keep numbers up and make quotas.

On April 1st, ICOM receiver prices will go up 5% across the board. Some of the coupons and other specials may be extended. Not sure. If you want something ICOM and can afford it now, it would be good to pick it up before the end of March.

(edited for space)

Paul,

Unless you're determined to build one, why not try to find a used VHF
pager somewhere in that band and recrystal it to the freq you need. A
lot of times, you can pick up a used pager for $15.00 to $20.00, and a
crystal should cost somewhere between $15.00 and $30.00 max.

Good Luck!

1545. Searchable Scanner Index online

Newsgroup: rec.radio.scanner
Date: 1998-03-13 00:00:00 UTC
From: "Sonny J. Lewis" <sonny@notnow.com>
Message-ID: <6eca9pkge1@charm.magnus.acs.ohio-state.edu>
Source record: 167195

The Columbus Frequency Index has placed online a searchable, category based index for scanning-related topics. This site is intended to benefit scanner users who use the web to find scanning-related info. To search the index, go to http://cfi.simplenet.com/category.hts. While it is still in its formative stages, it will grow to have many more links added as users see fit. Remember to bookmark the URL so you can easily find it in the future!

For those of you who wish to add a scanning-related site to the index, follow this URL: http://cfi.simplenet.com/category.hts?getentry (this page can also be accessed from the main index page by clicking on the Add button). If you run a website, remember to link to http://cfi.simplenet.com/category.hts so others can find it and use it!

The following categories are available; if you have any other suggestions for a category, let me know!

Sure, but it is not a software program, simple call your pager (u do
have one don't you!?) and play the tones, then a minute later u should
see the number on your pager, (old phreaker trick)!

You guys don't seem to have the maturity to take it to e-mail. Your egos are tied up in showing the rest of us who is better. News flash: You guys are weenies and you're boring the rest of us. Keeping your feud here isn't helping either of you accomplish your mission. Take it to e-mail or give it up. Can you comprehend what I'm saying? Do either of you have the guts to do what is right?

I have noticed that they have changed the PL tones used on these repeaters
twice recently.

For many years both systems used PL 146.2. Last year they changed to a DPL
code of D205. Then recently they changed again to a PL of 210.7.

My guess is that the first change (to DPL) was due to co-channel
interference (I often heard other agencies getting into the repeater when
conditions were up)

I further guess that the change from D205 to 210.7 was due to the hetrodyne
effect of the multi-site repeater system, and the DPL code not playing nice
with the setup of a linear multi-site system as this is...

No, Jeff, I was not in the commercial nor I have seen it.

I really do not care what most other people talk about (unless
it is a political enemy, then I want to know everything. But
then that is what good Intel is all about). I guess I get mad
at someone telling what I can not do, especially when it is
really bad law.

Jeff, I grew up in small town America. There is no such thing as
privacy except what you create (and that is usually an illusion).
To say that a broadcasted radio wave is private is crazy! What do
a bunch of lawyers know about technology?

Look, Jeff, if I remember right, you a radioman in the Coast Guard.
So you know about radio waves and you also know about how hard it is
to get things private, especially in small, tight groups of people.
It really counts on you being a person of character. The clowns who
tried to run the edges of the rules, usually found out that everyone
knew what they were up to. It is the same everywhere, even in the
big cities. You can run but you can't hide. Either you have character
and does not matter or bullshit and everyone knows. Either way,

privacy is an illusion that your friends create for you.

I don't know about listenning to it on a plane itself (and really wouldn't advise doing it,) but it's really interesting to listen to the ground crews. My business is not to far from one of the local airports, and I listen to the ground crews during the day, and at night when I'm home laying in bed. I have found it a great way in choosing what airline I fly when I have a choice, as I learn some interesting stuff about the airlines from the way the ground crews communicate.

Listening to radio is the same as looking in other people's windows? Are you nuts? Since radio began we've had the right to listen to anything as long as we did not repeat it. It is time to go back to that. This doesn't get the Democratic scum of the hook, however, since they recorded and leaked a cell phone call to the media. This was illegal all along.

> that is your choice.

Well, define "cyber-babble". It's not in the dictionary.
I haven't encountered the term before. So it sounds like
your statement of "computer babble" to me....a definite
slam. Duh........

And..... "spiel"?

Lordy, you'd howl to a half-dozen different deities for
my ass on a skewer if I slammed you..... I've been
real careful to pick my adjectives, adverbs, and nouns.
You're either not very careful, or.....very careful, too.

Which is it?

> I appreciate your comments/advise.

The GUY who owns StarTek used to be married to the
GAL who presently owns Optoelectronics. She stuck
it to him and won the store and all the goodies.

So he went out and started a competing enterprise.
So far he has stayed in freq counters and not gotten
into scanners like she has.

In other words, HE invented, designed, or supervised
same of all the Optoelectronics freq counters. And
now StarTek's. They're probably as good as Opto's
and maybe better.

I don't have any info specifically for the BC-220XLT, but
it is certain to use one of the NFM chips shown below for
other Uniden scanners in my database. Find one like the
below in yours and you'll be in business.

The Sacramento Police are on the county Trunked Radio System. You will need a Uniden BC835xlt TrunkTracker to receive anything Sacramento County Law Enforcement related. Stop by The Radio Place, south on Howe when it turns into Power Inn Rd., just past Fruitridge on the left. They will answer ALL your questions!

George / KD6CWU

I love talking on my trunk-tracker, that is why I bought it. Most
trunk-trackers do not come with a mic., you have to buy them separate.
I do not call 911 anymore, I just call the police on my trunk-tracker,
when my power goes out I talk to the power company trucks.
This is a must have item.....buy one now!

>without the resistor and the tip wire. If that doesn't work, try a
>shorter cable.
[snip]

Just got back from a trip where I had no net access, so I'm joining this a little late.

I built my cables with no resistor. They're also short - half of a 6' audio cable. 2400 bps isn't particularly fast, though, so I'd be suprised if cable length would be a problem.

>around. Which COM Port are you using? I think only 1 and 2 are
>supported by LOAD. Maybe Ken can give you a hand, his e-mail
[snip]

There are two versions of LOAD. One uses the simple two-wire cable, and supports just COM1 and COM2. The other needs a few extra jumpers at the computer end, and supports COM1,2,3 or 4. The version that supports only 1 and 2 is the one that supports between-character and between-line delays, but I don't know of anybody who's needed to do that yet.

Speaking of the PRO-64, I just got a spare battery holder. It was $5.29 plus tax plus $1 shipping. I ordered it via RS/Unlimited. I only had to go to two Radio Shacks before I found a salesman who understood the concept of ordering parts from RS/U. :-)

The primary use of my PRO-64 is listening at car races, so I wanted to have a spare pack ready to pop in, rather than fumbling with six separate cells in the middle of an event. Anybody playing with the nicad-charging mod, though, might want to get one in case they slip and destroy the original holder. :-) Or maybe have one for disposable cells and one for charging nicads.

I was wondering, I have a sony portable tv that has a ant input jack and
wanted to know if I could send a signal cord from my scanner headphone jack
to the portable tv jack to view vhf/uhf signals that transmit thru my
scanner. I know it may sound wierd but can it be done? Some other things
to note, I can switch my portable tv to get only source from the ant (aux)
and I have ran a normal cable ant from my house to the portable and I got
cable reception easy.
Any ideas..please reply via post or via e-mail,
Thanks,
FX1

(My girl told me this over the phone from the Atlanta Constitution, to me, to you)

A Marine Commander with ties to the White House is in trouble with the Corps for what he said from his house, to the housewife next door on his portable phone. A third woman taped the portable phone calls and turned them over to the Marine's superiors, who then brought charges of adultery against him. The Marine and the alledged adulturess next door, both deny there was any adultery. They also are asking a federal court to rule the cordless tapes illegal, as they had been obtained illegally. No word in the account read to me about the busybody lady with the scanner and tape machine. Oh, yes, she also was a marine's wife and knows the man and woman accused by the Marines of adultery. If you want to know more, better check the Atlanta Journal Constitution website.

1609. Gore in boston..Freqs?

Newsgroup: rec.radio.scanner
Date: 1998-03-13 00:00:00 UTC
From: pnash@bbnplanet.com
Message-ID: <NpbO.4$Cm6.207875@cam-news-reader1.bbnplanet.com>
Source record: 167324

Watching the news this morning I heard that VP Gore will be staying in Boston/Cambridge this weekend. I pulled out my BC235xlt and programmed in the codes for the Secret Service & FBI, aswell as MIT (he's speaking there this morning). I haven't heard *anything* on Secret Service/FBI freq's..

Here's what I've entered:

167.5625 - F.B.I. Nationwide Primary
167.6375 - F.B.I. Boston Primary
167.475 - F.B.I. Tactical (MA)
167.4875 - F.B.I. Boston
163.975 - F.B.I. Extended Car-Car ECC1
162.6375 - F.B.I. Boston ECC4
163.925 - F.B.I. Boston ECC5
167.3625 - F.B.I. Boston

165.375 - U.S. Secret Service (Boston & Nationwide)
166.700 - U.S. Secret Service (Executive Protection)
166.5125 - White House Communications Agency (Nationwide)

Yep, the FBI doesn't really have anything to do with the president visit, but it's not hurting anything to have them in there.. I guess my question is, are there any other frequencies to listen on? The only freq's I'm picking up is Cambridge Police & MIT Police.

Thanks for the help,
-Paul

1610. Indiana Toll Road Freq. ?

I need to find a 10k ohm SMD (hey, its tiny - maybe the micro size - roughly .100" long) to do a mod on a radio. Where would I find such an item? My local electronics supply house used to carry some, but demand was so low they gave it up. Is there a mail order house I could contact? Or anybody got a few of these they could spare?

Thanks

John McDermon, KE4VAL

Digikey says they stock these - P10KGCT-ND, 99 cents for 10 pieces. They're at 800-344-4539. That is a 1/16 watt 0603 form factor resistor.

Note that any surface mount work requires a steady hand, a low-power ultra-fine-tipped soldering iron, and a good magnifier.

I have an old bearcat 100 hand held scanner and I am trying to have it fixed or repair it myself I can't get the scematics from uniden they also don't repair them and I have tried sams they don't cover this model. I read a while back that electra was back around and repairing the old units does anyone know if that is true? or where one could get this old unit repaired or the scematics for it??
Any info would be helpfull.

Thanks,

Matt

Yes....they're denied all the time. Not necessairly by the time it gets to the judge, but in all the steps it takes to get the order before the judge.

If a cop wants to tap a conversation (wire or wireless...doesn't matter), they first have to present their reasons to their supervisor and/or commander. My experience is that about 75% of the requests are denied at this point. Once they approve, an order is typed up and approved by the commander. IT is then taken to the DA's office where several attorneys from the DA's office go over the request with a fine tooth comb. About 1/3rd of the requests that make it this far get denied. After all of that is done, then the request is brought before a judge and at that point...about 90% of them are signed.

For those that are denied along the way, usually more information or supporting evidence is needed to get approval. Once that additional information or evidence is gotten, the process starts over again. I would guess that overall....about 1/2 of the requests are eventually granted.

But you see, the cops and DA's office know what the courts require, and they don't bother when they know they can't support the request. Cops are just as lazy as anyone else. There's a lot of paperwork in getting a wiretap and no one wants to got thru it knowing it's going to be denied.

The above is from my 26 years experience as a cop <now retired> a major metro area.

Don

I hope you're right, because they've really turned the law upside-down on
us. The original Act was one of those really rare, thoughtful laws that
only appear in the rarest of circumstances.

I've spoken to a couple people who feel we're not that bad off (Hi, John!)
but we really are at the mercy of what the FCC believes -- or is told to
believe -- is fair. The law is no longer on our side.

> In time I believe that this will reverse.

On the other hand, someone else will go out there, tune his TV to channel
70, get a "sensitive" message, and another law will be passed that will
do no good.

Or even worse, one of these weenies will discuss something sensitive -- as
in national security -- over his cellphone which will be picked up by the
"wrong" embassy, and will wonder why his precious law didn't protect him.

Grr. F**king idiots.

Thickest bunch of Bull I ever read. Mackey, I've been reading this NG
since '91, and NEVER before you started this crap did it happen to such
a large degree. I very clearly remember how it started! Cheek posted
his FAQ, and *YOU* replied with your "How dare you" followup! There
were *NO* major flame wars on this group before that time. YOU STARTED
IT, and only newbies may believe otherwise!

Christ, Mackey, do you really believe what you are spewing? What ever
benefit of the doubt I may have ever given you in the past is *LONG
GONE* after that whopper of a lie! No matter how arrogant and thick
headed I've seen Cheek behave here, Nothing compares to that bold faced
lie above!!!!

Now, once again, would you *PLEASE* stop changing the way your name
appears in the "from" line, so you'll stay in my damn killfile!?!?!?

Back in the box, IDIOT. BACK IN THE BOX!!!!

Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.scanner,rec.radio.amateur.misc

Hello-
I have a need for a single channel (need to monitor a repeater-147.240 MHZ) and am looking to put together a simple circuit to listen to only that frequency.(note- I am a no-code tech and I have friends who hang out on that repeater). I'm looking for something light (i can put in my pocket or on my belt, with a earphone)and as simple as possible. Has anyone put one together that can tell me the difficulties and the cost. I've been reading the news archives and stumbled on the MC3363 from motorola which seems like the best solution. If you have experience with this IC or if you know of a simpler path to achieve my goal, please let me know.
I read the app notes (AP980) from motorola. Here are my concerns. First off, it said not to breadboard this circuit, but to use copper traces because occllations will occur. My only tools are a soldering iron, a simpson meter, and some Radio Shack PC board. Will this be a problem? I have pretty limited electronic skills and test equipment. Also, the notes say I can flip dip switches and get 256 2-meter frequencies. This is cool, but I only need one. Can I use a crystal instead? Has anyone a shematic that will make this reciever work? Any push in the right direction will be appreciated.

Thanks,

Paul Carter KF4JIR

Two pieces of information:

1) The frequencies for the Indiana Toll Road are:
154.7750 District 11 (Toll Road) State Police
155.4150 Toll Road Administration (toll booths
and road crews).

2) Indiana law prohibits the use of mobile or handheld scanners unless
you are a licensed ham, a police officer, a news reporter, or a
dealer. With a few other exceptions. See the full text of the law
below. I didn't write it, I only quoted it...

For more info:

The Indiana Scanner Frequency Page
http://members.iquest.net/~aeverhart/

The Indiana Code - from the official state web site.
http://www.ai.org/legislative/ic/97/

This particular law:
http://www.ai.org/legislative/ic/97/title35/ar44/ch3.html#IC35-44-3-12

Sec. 12. (a) A person who knowingly or intentionally:
(1) possesses a police radio;
(2) transmits over a frequency assigned for police emergency
purposes; or
(3) possesses or uses a police radio:
(A) while committing a crime;
(B) to further the commission of a crime; or
(C) to avoid detection by a law enforcement agency;
commits unlawful use of a police radio, a Class B misdemeanor.
(b) Subsection (a)(1) and (a)(2) do not apply to:
(1) a governmental entity;
(2) a regularly employed law enforcement officer;
(3) a common carrier of persons for hire whose vehicles are
used in emergency service;
(4) a public service or utility company whose vehicles are
used in emergency service;

(5) a person who has written permission from the chief executive officer of a law enforcement agency to possess a police radio;
(6) a person who holds an amateur radio license issued by the Federal Communications Commission if the person is not transmitting over a frequency assigned for police emergency purposes;
(7) a person who uses a police radio only in the person's dwelling or place of business;
(8) a person:
(A) who is regularly engaged in newsgathering activities;
(B) who is employed by a newspaper qualified to receive legal advertisements under IC 5-3-1, a wire service, or a licensed commercial or public radio or television station; and
(C) whose name is furnished by his employer to the chief executive officer of a law enforcement agency in the county in which the employer's principal office is located;
(9) a person engaged in the business of manufacturing or selling police radios; or
(10) a person who possesses or uses a police radio during the normal course of the person's lawful business.
(c) As used in this section, "police radio" means a radio that is capable of sending or receiving signals transmitted on frequencies assigned by the Federal Communications Commission for police emergency purposes and that:
(1) can be installed, maintained, or operated in a vehicle; or
(2) can be operated while it is being carried by an individual.
The term does not include a radio designed for use only in a dwelling.

A BILL

To amend the Communications Act of 1934 to strengthen and clarify prohibitions on electronic eavesdropping, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the ``Wireless Privacy Enhancement Act of 1998''.

SEC. 2. COMMERCE IN ELECTRONIC EAVESDROPPING DEVICES.

(a) Prohibition on Modification.--Section 302(b) of the Communications Act of 1934 (47 U.S.C. 302a(b)) is amended by inserting before the period at the end thereof the following: ``, or modify any such device, equipment, or system in any manner that causes such device, equipment, or system to fail to comply with such regulations''.
(b) Prohibition on Commerce in Scanning Receivers.--Section 302(d) of such Act (47 U.S.C. 302a(d)) is amended to read as follows:
``(d) Equipment Authorization Regulations.--
``(1) Privacy protections required.--The Commission shall prescribe regulations, and review and revise such regulations as necessary in response to subsequent changes in technology or behavior, denying equipment authorization (under part 15 of title 47, Code of Federal Regulations, or any other part of that title) for any scanning receiver that is capable of--
``(A) receiving transmissions in the frequencies that are allocated to the domestic cellular radio telecommunications service or the personal communications service;
``(B) readily being altered to receive transmissions in such frequencies;
``(C) being equipped with decoders that--
``(i) convert digital domestic cellular radio telecommunications service, personal communications service, or protected specialized mobile radio service transmissions to analog voice audio; or
``(ii) convert protected paging service transmissions to alphanumeric text; or
``(D) being equipped with devices that otherwise decode encrypted radio transmissions for the purposes of unauthorized interception.
``(2) Privacy protections for shared frequencies.--The Commission shall, with respect to scanning receivers capable of receiving transmissions in frequencies that are used by commercial mobile services and that are shared by public safety users, examine methods, and may prescribe such regulations as may be necessary, to enhance the privacy of users of such frequencies.
``(3) Tampering prevention.--In prescribing regulations pursuant to paragraph (1), the Commission shall consider

Union Calendar No. 243
105th CONGRESS
2d Session
H. R. 2369

[Report No. 105-425]

To amend the Communications Act of 1934 to strengthen and clarify prohibitions on electronic eavesdropping, and for other purposes.

IN THE HOUSE OF REPRESENTATIVES

July 31, 1997

Mr. Tauzin (for himself, Mr. Markey, Mr. Oxley, Mr. Gillmor, Ms. Eshoo, and Ms. McCarthy of Missouri) introduced the following bill; which was referred to the Committee on Commerce

March 3, 1998

Additional sponsors: Mr. Manton, Mr. Wynn, Mr. Peterson of Minnesota, Mr. Deal of Georgia, Mr. Campbell, and Mr. Burton of Indiana

March 3, 1998

Reported with an amendment, committed to the Committee of the Whole House on the State of the Union, and ordered to be printed
[Strike out all after the enacting clause and insert the part printed in italic]
[For text of introduced bill, see copy of bill as introduced on July 31, 1997]

A BILL

To amend the Communications Act of 1934 to strengthen and clarify prohibitions on electronic eavesdropping, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the ``Wireless Privacy Enhancement Act of 1998''.

SEC. 2. COMMERCE IN ELECTRONIC EAVESDROPPING DEVICES.

(a) Prohibition on Modification.--Section 302(b) of the Communications Act of 1934 (47 U.S.C. 302a(b)) is amended by inserting before the period at the end thereof the following: ``, or modify any such device, equipment, or system in any manner that causes such device, equipment, or system to fail to comply with such regulations''.
(b) Prohibition on Commerce in Scanning Receivers.--Section 302(d) of such Act (47 U.S.C. 302a(d)) is amended to read as follows:
``(d) Equipment Authorization Regulations.--
``(1) Privacy protections required.--The Commission shall prescribe regulations, and review and revise such regulations as necessary in response to subsequent changes in technology or behavior, denying equipment authorization (under part 15 of title 47, Code of Federal Regulations, or any other part of that title) for any scanning receiver that is capable of--
``(A) receiving transmissions in the frequencies that are allocated to the domestic cellular radio telecommunications service or the personal communications service;
``(B) readily being altered to receive transmissions in such frequencies;
``(C) being equipped with decoders that--
``(i) convert digital domestic cellular radio telecommunications service, personal communications service, or protected specialized mobile radio service transmissions to analog voice audio; or
``(ii) convert protected paging service transmissions to alphanumeric text; or
``(D) being equipped with devices that otherwise decode encrypted radio transmissions for the purposes of unauthorized interception.
``(2) Privacy protections for shared frequencies.--The Commission shall, with respect to scanning receivers capable of

receiving transmissions in frequencies that are used by commercial mobile services and that are shared by public safety users, examine methods, and may prescribe such regulations as may be necessary, to enhance the privacy of users of such frequencies.
``(3) Tampering prevention.--In prescribing regulations pursuant to paragraph (1), the Commission shall consider defining `capable of readily being altered' to require scanning receivers to be manufactured in a manner that effectively precludes alteration of equipment features and functions as necessary to prevent commerce in devices that may be used unlawfully to intercept or divulge radio communication.
``(4) Warning labels.--In prescribing regulations under

paragraph (1), the Commission shall consider requiring labels
on scanning receivers warning of the prohibitions in Federal
law on intentionally intercepting or divulging radio
communications.
``(5) Definitions.--As used in this subsection, the term
`protected' means secured by an electronic method that is not
published or disclosed except to authorized users, as further
defined by Commission regulation.''.
(c) Implementing Regulations.--Within 90 days after the date of
enactment of this Act, the Federal Communications Commission shall
prescribe amendments to its regulations for the purposes of
implementing the amendments made by this section.

SEC. 3. UNAUTHORIZED INTERCEPTION OR PUBLICATION OF COMMUNICATIONS.

Section 705 of the Communications Act of 1934 (47 U.S.C. 605) is
amended--
(1) in the heading of such section, by inserting
``interception or'' after ``unauthorized'';
(2) in the first sentence of subsection (a), by striking
``Except as authorized by chapter 119, title 18, United States
Code, no person'' and inserting ``No person'';
(3) in the second sentence of subsection (a)--
(A) by inserting ``intentionally'' before
``intercept''; and
(B) by striking ``and divulge'' and inserting ``or
divulge'';
(4) by striking the last sentence of subsection (a) and
inserting the following: ``Nothing in this subsection prohibits
an interception or disclosure of a communication as authorized
by chapter 119 of title 18, United States Code.'';
(5) in subsection (e)(1)--
(A) by striking ``fined not more than $2,000 or'';
and
(B) by inserting ``or fined under title 18, United
States Code,'' after ``6 months,''; and
(6) in subsection (e)(3), by striking ``any violation'' and
inserting ``any receipt, interception, divulgence, publication,
or utilization of any communication in violation'';
(7) in subsection (e)(4), by striking ``any other activity
prohibited by subsection (a)'' and inserting ``any receipt,
interception, divulgence, publication, or utilization of any
communication in violation of subsection (a)''; and
(8) by adding at the end of subsection (e) the following
new paragraph:
``(7) Notwithstanding any other investigative or enforcement
activities of any other Federal agency, the Commission shall
investigate alleged violations of this section and may proceed to
initiate action under section 503 of this Act to impose forfeiture
penalties with respect to such violation upon conclusion of the
Commission's investigation.''.

Not a great map (no minor streets, just very major ones & freeways),
but it is available via the web, and better than nothing.

Try the DFD web site. The URL of the page with the map is:

http://www.ci.dallas.tx.us/dfd/stamp97.htm

In California, H&S stands for "Health and Safety", the code sections that cover narcotics and controlled substances. (i.e. H & S 11357a - possesion of marijuana, 11550 - under the influence of controlled substance or narcotic) "H&S activity" is used on the air to refer to drug use, sales, etc.

You might send a letter to the FCC. Computers are not allowed to exceed a certain amount of spurious emissions and if yours is, it may be the manufacturers responsibility to get it into compliance. The FCC is way understaffed, so you'll probably never hear from them. My computer does the same thing, I cannot monitor my neighbors on their 46 Mhz cordless phones while the computer is running. You might ascertain if the emissions are coming from the monitor, or the CPU. Once you isolate the source, try shielding the device with foil tape available from many mail order electronic suppliers. It may help to use shielded cables, including the power cable. As for your Plectron receiver, I would recommend using an outdoor antenna if you are a fireman and it is important for you to have it. That will get it away from the interference and outside where it can receive the desired signal better. As I stated earlier, I have the same problem, but I have been tolerating it. What I would recommend you do first is take a cardboard box, cut it to fit precisely over your CPU, line the box inside & out with aluminum foil (for shielding), and slip it over your CPU. If the interference goes away, that's a start. If you use a box keep in mind not to block the ventilation fan.

I have a Radio Shack HTX212 and Cushcraft 3 element dual band yagi (70cm/2m) for trade for a used trunk tracker.
The htx212 was factory serviced for blown finals in November, and has been is service since with no trouble. The Yagi was used once on field day last year, and never after. I am hoping to trade with someone local, as I will not get into shipping and handeling for swap orders. A am in Central Massachusetts.

Hi. I just bought a Pro 26, and read mixed reviews. Is it any good?
I only paid $199.00. Now, I just found out that one can use IF
frequencies to listen to cell calls, and it works! But, I already
ordered a full coverage logic board from Javaition (sp?) Will the
reception be better when I get the board using the correct frequencies
as opposed to the IF frequencies? Also, I just noticed my computer
interferes big time when it's on. Would using an outside antenna be
an option I should consider? Thank you for your replies.

Usually a "Health and Safety Code" violation involving controlled substances. In the case of the term "H&S activity", you can assume it's drugs.

What law prohibits this? If your neighbor's house is located right next to yours (or a busy street) and your neighbor decides to strip in front of his windows without pulling down his window shade or planting shrubbery, he would not receive much sympathy when someone happened to notice his behavior.

Only by those who believe their privacy extends over the the private
property of other people. If a radio wave goes through my house and my
body, I am not "invading" anything by listening to it. Anything someone
does in their house may be private, but not something they broadcast over
the air.
Listning to radio signals can not be compared to peeking in windows, unless
those windows are clearly visible from the street and no one has bothered
to block the view. In this case, no one would have much sympathy if someone
in the house complained that pedestrians were "invading" their privacy by
looking towards the house.

You could also find a real cheap scanner. Try looking at fleemarkets, garage sales, and hamfests for one of the older ones. Virtually any radio will cover 144-148 Mhz.

Source record: 167062

Scannerheads,

I was scanning the bands today and came across weird stuff on 220.210 Mhz. There is a tone every fifteen seconds or so, and every once in while there is some garbled speech. I've tried AM, FMn, USSB, and LSSB and can't understand the speech. The signal is strong, 9dB on a unity-gain discone. Does anyone happen to know what is on this frequency?

Thanks,
Jethro

If I'm not mistaken, all aircraft operating in and around a
specific (controlled) airport must use the approach and ground frequencies
assigned to that airport. This is regardless of what type of aircraft it
is.....airplane, helicopter, blimp, glider or UFO.

Hi people.
I wanted to comment on my Yupiteru MVT-9000. I own four scanners all together and even though this was the most expensive one of the bunch, it really is the least desirable when I'm listening to local frequencies. I'm not the most engineered type of person and I still haven't taken the time to learn about all the buttons and knobs on the thing but I can definitely tell you this. I also own a Rat Shack Pro-26 and it is the best when it comes to picking up local police and fire frequencies even though it is cellular blocked.
My main point is this: Does anyone else own the Yupiteru MVT-9000? I would really enjoy some email on some stories or experiences with this unit for I would really like to learn how to use it the best of advantages. I really think for the price that I paid for it, and besides ordering it from Finland, that it should be the best bang-wizzing instrument that I own. Any help would be greatly appreciated. You can email me at cskoenig@home.com

Thanks,

Ck

1661. Re: Internal Speaker

Part of the problem is most of the scanner's speakers direct the sound from the top or side. Also being small there is not much bass. Try building a little acoustical box over the speaker opening with an open end of the box facing where you sit. Like a little speaker enclosure. Experiment with light cardboard (shoe box thickness) and tape. As well as directing the sound towards you, you should pick up a little bass in the audio which may be easier to hear. Try different materials and different box and opening shapes. May be a cheap solution.

Okay..I'm not exactly a newbie at this sort of thing but I would like some simple questions answered please. When I received a listing of cellular phone frequencies it gives Non-wireline and Wireline company's. What is the difference between the two?

Number two, when it gives base and Mobile numbers. what is the difference between these two terms (base and mobile). Does this mean that I have numbers for both parties chatting? I realize that this is as illegal as hell but I would like to know what these terms mean anyway. Would somebody please respond to this?

Happy Listening,

Ck

It looks like it may be a while before this stuff gets into common use.

You might want to look into an APCO 25-compatible communication analyser test set. This will be quite expensive.

Eavesdropping on someone's telephone call is the same form of voyeurism
as peering in their windows (except that one allows you to hide in your
home with your drapes closed while the other requires that you must be
peeking through your drapes).

>Since radio began we've had the right to listen to anything as
>long as we did not repeat it.

Wire-tapping someone's telephone has been illegal for quite a long
time. Now ask yourself how listening to a phone conversation
via a scanner is different from wire-tapping that party's phone.
Your intent is the same - to spy on your neighbor.

You can attempt to justify your obsession of electronic "peeping tom"
but it doesn't change the fact that you're committing a federal crime.
It's just a pity that we need such a federal law in place of what
should be a moral obligation to respect the privacy of your neighbors.

If you want the EPCA repealed, then you should also fight for allowing
unlimited wire-tapping without court intervention.

Source record: 167086

I just received my new Scantenna this morning and spent a coupla hours putting it up on a pole outside.

It seems to work well although it's way too early to tell yet and I haven't been able to compare it to my discone yet.

One thing I did notice though, and which disappointed me somewhat, is the poor quality of the whole antenna. It looks like it's been made the way those really cheap and nasty TV antennas from the far east are made.

I can't help wondering how many days it's gonna take before all kinds of weird electro-chemical effects start happening between the various pieces.

Does anyone else have any comment on this antenna?

I wonder whats next? Will criminals start suing the police for catching them? Will criminals sue their parents for the fingerprints that got them caught? Let's not forget DNA tests, very big in high profile cases so it will be a lager $$ figure. Maybe McVeigh should sue the FBI and the state of OK for all the methods they used to catch and convict him. How long is it going to be before we are sued by someone for turning our TV sets to channel 88? I hope we do a show on this mess, I could stay on this soapbox for hours...

G Hansen <glenn.hansen@usa.net> wrote:

> Regarding the subject line, I felt he picked it to attract attention or
> possibly to fool the idiot cancel freak.

Ahhhhh.....you "felt" that. Okay, that's cool.
But let's stand off a little and take a look at
two extreme statements:

1. I know......
2. I don't know....

Well, "felt" is a quantity that falls on a line
somewhere between the above two extremes, just
like....."I think"; "I'm not sure"; "I don't think",
and so on.

So you "felt". Please keep that in mind as we proceed.

> I think you misunderstood me
> Bill. If you really want to get into interpreting it I would have to say
> he meant for one to drop to their knees. I don't see how you interpret
> that as somebody offering to bend over for you or be a victim.

Ummmm...."interpret". Again, that's cool. "Interpret"
certain falls on a line somewhere between (1) and (2)
above. Let's keep that in mind as we proceed.

As for *my* perception, the subject line was
certainly controversial, given that this is a
scanner forum. Picking a subject line like that,
was *surely* an invitation for folks to drop
in and see if the zipper was on the BACK SIDE
of his britches..... or even if he was a weirdo
who puts his britches on bass-ackwards.

You have to admit that the subject line is hardly
appropriate for a scanner forum, much less one
that's routinely visited by both genders, as well
as ages 9 to 90. It wasn't exactly a family-oriented
subject line, was it? And was it intended to be
constructive with the idea of accomplishing something
good, healthy, and wholesome?

I doubt it.

> > > BTW, I said your virtual reality spiel is cyber-babble. Bullstuff. If

> >
> > Well, define "cyber-babble". It's not in the dictionary.

> Ever heard the term Psycho-babble in relation to psychology and some of
> their BS reasoning and terms. I bet you can figure it out.

Nope. I'm not a shrink, and even though I *am* well
studied in that realm, I never heard of the term in
any clinical sense of the words.

The etymology of "babble" probably has to do with the
biblical story of Babylon where the populace pissed off
the local deity who then wreaked havoc by rendering the
citizens, each speaking a different language from the rest.
Thus no one could understand each other. "Babble....."

Well, *you* understand me, all right. So your use of
the term was hardly "clinical".

> > I haven't encountered the term before. So it sounds like
> > your statement of "computer babble" to me....a definite
> > slam. Duh........

> Read the above again. Yes, I guess you could say I slammed your "virtual
> reality spiel". I am not as articulate as you Bill.

Well? *Get* articulate. This is a forum and medium
where articulation is the singular difference betwixt
knowing and not knowing. You don't go to a knitting
bee to talk radio.... and knitters don't go to a
radio gathering to knit booties. In this forum, the
ability to communicate (read: articulate) is all the
more vital.

> I am for loss of any other way to put it. Spiel, stand,
> sermon or what ever. The statement you have made many
> times concerning virtual reality. Spiel for
> loss of words. Sorry if I offended you with the word spiel.

It's a low class word, verging on getting personal.
Dictionary-wise, "spiel" and "eloquent" are synonyms,
and I know damned good and well you weren't calling
me "eloquent". So, you used the term in the vernacular.
I know it. And you know it.

The bottom line.....is that it and certain other terms
you've picked simply aren't geared to effective communications.

> > Lordy, you'd howl to a half-dozen different deities for
> > my ass on a skewer if I slammed you.........

> Now that is babble Bill. When and what deities have I howled to about
> you. Are you reaching or what? Talk about victims! I have gone to bat
> for you on different issues and disagreed on a few, but I don't recall
> going to the deities about you. That seems pretty cheap Bill.

Ha ha ha ha ha ha! Well, let me drag you (kicking and
screaming, if need be) back to 1990 or 91 to the old
FidoNet SHORTWAVE echo where you shot through the roof
when I alluded to your "nescience". Without a doubt,
it sent you to the dictionary to discover that I had
called you "ignorant". I'm sure that toasted you much
more than if I had just called you "dumb". But the
point is.....you went ballistic.

I have no doubt you'd take exception even now if I
took my choices of words down to your level. Yet,
we have to play by the same rules.....either a higher
level set or a lower one. Which one makes little
difference to me....so long as we take pains to say
what we mean and mean what we say....and play to the
same sheet of music, whatever it may be.

> > I've been
> > real careful to pick my adjectives, adverbs, and nouns.
> > You're either not very careful, or.....very careful, too.
> >
> > Which is it?

> Which ever you choose Bill. I think I have been as clear as I can.
> Enough from me. Sorry if I offended you I only meant to disagree.

You keep on and on with that "offense" shit. The only offense
is the one you're taking in some weird attempt to get me
on the defense. You're not saying much in terms of getting
to any point other than to shoot me out of the saddle
for "virtual reality" and for how I see good ol' Ollie's
offer to unzip.

You don't plead your case nearly so much as you try
to shoot down mine. I don't think THAT is nearly as
effective as building your own case, if it is worth
building. THAT is the proper way to argue and to
build a winner - NOT by shooting down the other guy.

THAT is exactly where Mackey, Boe, and Hankie-poo got
it all wrong. That's all they can do is piss and shoot.
They can't do beans on their own merits. Geez, they
have NO merits. Neither did our man Ollie, for that
matter. He's never participated here in order to gain
or build any merit.

It's the same as if you move from your comfy digs in
Oregon back to Possum Holler, Missouri....and go to a
town council meeting your first week there and try to

tell 'em what's all wrong with their ways of doing things.

Yeah....you're a human being with civil, social, and
legal rights and entitlements, but you sure as tootin
ain't righted and entitled to jump into the middle of
a community in which you've not paid any dues and not
established yourself.

That's Ollie. Who the hell's "Ollie"? Where'd he come
from? What's he want other than to invite us to check
out his wretched zipper? And is the zipper on the front
or the rear of his britches?

See? I'm trying to *build* my case in lieu of shooting
down yours. I really *try* to deal with people in that
manner......and that's how I want to be dealt with in
return. And THAT is the ONLY way I can ever be convinced
of something.......is to show me a better way....not the
fallacies of mine. Everything has fallacies. So what?
It's not the weaknesses of anything that loses; rather it's
the strengths that WIN!

At least, that's the court on which I prefer to play....
and it has one thing going for it, if nothing else; there's
less chance and opportunity to get down to personal attacks.
If your case has merit, then build it. Even if you
wreck mine, that doesn't make yours a winner.

I built mine on the premise that no one needs to be
a victim; that we're all omnipotent; and can't be hurt
unless we *want* to be hurt; that we each possess
impenetrable force fields; and multi-megaton nukes.

Now you build your case and convince me. Else go
whack Prozac Petey and his Thorny Vine Music company.
That's always good for laughs and never needs any
justification.

> Doesn't Uniden make the CPU? I can't find a
> manufacuturer listed in the Pro-26 Service Manual.

Actually, scanner CPU's are generic devices made
under a variety of labels, Mitsubishi, Toshiba,
NEC, etc. There are definite part numbers for
these CPU's, but the scanner manufacturers contract
for thousands of them with their own numbers
imprinted on the chips.

Another characteristic of these chips is that
as they come from the factory, they're worthless.
That is, they have no code or firmware embedded
into them. When the scanner manufacturer makes
the contract, they either "burn" the CPU's themselves
or contract the chip makers to do it.

The crux of this is that there is little advantage
of having a data sheet for these CPUs, though the
service manuals do provide a pinout and internal
flow diagram in most cases. Lot of good that does
because the core of them all is an EPROM block where
everything that counts goes....and there's no way
under the sun we can ever get a hold of that code.

The following books are from the inventory of a closed mail-order bookdealer. None are used; all in perfect condition unless otherwise specified. Satisfaction guaranteed or full refund.

List revised 10AM, Saturday, March 14, 1998

Financial Planning for Super Calc and the IBM PC, with 5.25" disk, Sams 22061, list $49.95, ANY OFFER
100 1980's 5.25 inch floppies with IBM compatible DEMO software, ANY OFFER plus actual shipping cost; over 1000 floppies available. Value limited to historical significance.
73 Dipole & Long-Wire Antennas, Edward M. Noll, Sams 24006, 1st ed., 10th ptg, 1982, 160 pgs, list $7.50. $5.
Vintage Radio, 1887-1929, Morgan E. McMahon, 2nd ed., 1973, 250 pgs, HARD COVER edition $8.
Vintage Radio, same as above, SOFT COVER edition, $5.
Easi-Guide to Mobile Home Maintenance, Sams 21136, 1975, 144pgs, list $4.50. 50 cents.
Easi-Guide to Snowmobiling, Sams 21221, 1975, 144 pgs, list $3.50. 50 cents.
Listen to Radio Energy, Light and Sound, Sams 21525, 1978, 155 pgs, list $6.95. $3.
The Propagation Wizard's Handbook, J. H. Nelson, 73 Publications, 1978, 136 pgs, list $6.95, $4.
OSCAR, Stratis Caramanolis, translated from German by Colin Newberry, 190 pgs, $2.
Broadcast News, Donald W. Miles, Sams 21183, 1975, 385 pgs, $2.
Covert Intelligence: Electronic Eavesdropping Manual, Raymond N. Jones, CRB Research, 40 pgs, unknown copyright date, typical of junk material from CRB. $1.
Electronic Circuitbook 1, Project Constructions, Forrest Mims III, Sams 21241, 1976, 95 pgs, list $4.95. $1.
Second Class Radiotelephone License Handbook, Edward M. Noll, Sams 21722, 6th ed., 2nd ptg, 1981. (FOR HISTORICAL REF ONLY) $2.
BYTE Magazine, FIRST THREE ISSUES, $35. Any full year, 1977-1981, $45.
Photofacts, Howard W. Sams, #1 through 1400 with some exceptions, USED, good condition, any number (e.g., #23, #1004, #1350), $4. Any folder (a particular radio, TV, etc.), $2.

Any 100 consecutive numbers, $150.
Telephone Accessories You Can Build, Gilder, Hayden 5748-2,
9th ptg, 1981, list $7.25. $3.
More Telephone Accessories You cAn Build, Gilder, Hayden 0893-7,
2nd ptg, 1981, 128 pgs, list $5.95. $2.
North American Radio & TV Station Guide, Vane A. Jones, 14th ed.,
Sams 21725, 1st ptg, 1981, list $7.95. $5.
Same title as above, 15th ed., 225 pgs, 1984, list $9.95. $8.
Repeater Edition, 1981-1982 Edition, ARRL, 110 pgs, list $1.
50 cents or FREE with any purchase.
Novice Class Amateur Radio License Manual, Anderson, Sams 21529,
1st ed., 2nd ptg, 1979, list $3.95. $1.
World Radio TV Handbook, Billboard Publications, 1981, 1982, 1983,
1984, 1985, 1986, 1987, 1988, 1989, 1990, 480-600 pages,
list $14.95 - $19.95. $4 each. Additional copies, $3 each.
The IRCA Almanac, 2nd ed., 1980, list $9.95, $1.
Linear IC Principles, Experiments and Projects, Noll, Sams 21568,
2nd printing, 1980, list $9.95. $3.
Perfect Guide to Perfect Writer, Meilach, Sams 22186,
1st printing, 1984, list $16.95. 50 cents.
Programs for Beginners on the TRS-80, Blechman, Hayden 5182-4,
2nd ptg, 1981, list $8.95. $1.
TI BASIC, Introduction to; Inman, Zamora, Albrect; Hayden 5185-9,
2nd ptg, 1981, list $11.95. $1.
Computer Design Development - Principal Papers, edited Swartzlander,
Hayden 5988-4, 2nd ptg, 1978, HARD COVER. Only $14.
Practical Design for Electromagnetic Compatibility, Ficchi,
Hayden 5685-0, 1st ptg, 1971, HARD COVER, list $14.95. $5.
Dr. Dobb's Journal of Computer Calisthenics & Orthodontia, Volume 5,
Hayden 5492-0, list $22.95, $8.
Radio Angels, Stack WA6IPF, Ham Radio, 1st ptg, 1978, Only $3.
Analog Instrumentation Fundamentals, Leonard, Sams 21835,
1st ptg, 1981, list $19.95. $5.

hello Paul
I realise this is not, necessarily, the answer you are looking for,
however, have you considered getting one of those, fairly,
inexpensive, scanners, like those from radio shack, and use it. I
realise this would be more expensive but you would have the
flexibility of what you want plus the ablility to change frequency as
your receiving interests change, eg, a qso on that repeater might
decide to qsy and you would then have the opion, range permiting, to
follow them.
Just a thought.

No...using your RADIO to listen to communications that are meant to be
heard by third parties isn't a equal comparison to looking into other
people's windows. Using a illegal modified scanner in order to eavesdrop
on conversations you aren't supposed to be hearing...IS though.

> long as we did not repeat it. It is time to go back to that. This

You can listen to whatever is on your radio. Things change though when you
make attempts to illegally intercept things that wasn't meant for your
ears. It's called an "invasion of privacy".

> doesn't get the Democratic scum of the hook, however, since they
> recorded and leaked a cell phone call to the media. This was illegal all
> along.

Yeah...maybe we can hook a wire to your phone lines....as "long as I don't
repeat it"?

Greetings

I'm looking to purchase a computer interface for the YAESU FRG-9600. I've seen a few plans, but I'd prefer to purchase one ready made. Anyone have any ideas?

Thanks for your help!

Brian

Personality quirks aside, you guys are missing the issue. It is just as
legal in the US to sit in your own home, looking out your window (with or
without binoculars) and watching your neighbor as it is to listen to your
scanner.

1715. Upgrade RS Discone (VHF whip) for $6.00

Newsgroup: rec.radio.scanner
Date: 1998-03-14 00:00:00 UTC
From: jimmiew@sprynet.com
Message-ID: <350ad7ac.9724871@news.sprynet.com>
Source record: 167185

I have an older RS discone that I just recently installed. I wanted to improve the low band reception and tried a CB whip on top. It was a pain to connect it and it really didn't help much. On a whim I went into Radio shack, looked an the vertical element on the newer style discone and asked the sales guy if I could order the replacement parts. He had to make a call to figure out the part numbers. Once he got the numbers, he plugged it into the computer and yes, you can order them.

They are ordered through Radio Shack Unlimited. This is where they take your money at the store, then the parts are shipped directly to you. The following is what you need to get.

Coil Assembly RSU# 11986775 $1.99
Whip W/Tip RSU# 11986783 $2.69

For additional details and a link to a Tandy page for the discone, visit my scanning page:

http://home.sprynet.com/sprynet/jimmiew/scan.htm

Disclaimer: yadda yadda - don't work for RS - yadda yadda - nothing in it for me.

Looking in your negihbor's window means you are trespassing on to their property and attempting to watch something in their own home. As we're all aware, radio waves, however, go through everyone's property, If a radio tansmission passes through my house and thourgh my body, I'm not "invading" anything by listening to it. The privacy of cell-phone users does not extend into my domain.

Could the manufacturers program the EEPROM for the
cellular bands, but lock out the bands by somehow leaving
a pin of the CPU unconnected? I noticed the Pro-26 has
several pins that don't connect to anything.

1719. Interference from computer hard drive

Newsgroup: rec.radio.scanner
Date: 1998-03-14 00:00:00 UTC
From: jnooney@albany.net
Message-ID: <350AF862.FF51CBDA@albany.net>
Source record: 167189
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I recently installed a new hard drive in my computer. It works great but the problem is that since it's installation it locks up my scanner on any frequency in the 46MHz range. It also interferes with my fire monitor and pager (46.50). The interference is so bad that the monitor won't even trip when our FD's tones transmitted if the computer is on. This happens anywhere in the house so moving the computer or my radios is useless. I have tried using a choke on the power lines to my radios but that didn't work. Any suggestions?

Joe

In a word, no. The headphone jack outputs an audio signal only.
The antenna input jack is looking for a modulated radio frequency signal to
feed to the tuner in the TV. Sorry.

>>Very biased that way.

>Nope rather simple the rules for evidence are more relaxed and not as
>demanding as they would be in a criminal court.

According to the AP report on the story, the Justice Dept investigation stalled when McDermott sought to quash DOJ subpoenas directed to several members of his staff and to committee counsel James Cole on the basis that the Speech & Debate Clause of the constitution protects McDermott from any liability for his actions in connection with the infamous taping.

Why in the world DOJ allowed McDermott to get away with such an assertion is beyond me. Perhaps they concluded that they simply didn't want to pursue the matter. McDermott's position is, however, totally untenable.

The USSC has squarely held that the Speech & Debate Clause protects congresscritters from liability only for statements made in Congress or otherwise in the course of their official duties. It doesn't even apply to statements made in a news conference, press release, or newsletter. (Hutchinson v. Proxmire) How it could possibly be applied to a congressman's action in concealing evidence from the congressional committee on which he served in order to turn it over to the media is totally beyond me! I betcha it will also be beyond the court which hears Boehner v. McDermott.

RALEIGH HAMFEST and COMPUTER FAIR

NORTH CAROLINA SECTION ARRL CONVENTION

SUNDAY, APRIL 5

NORTH CAROLINA STATE FAIRGROUNDS

3500 attended last year! Giant, all-indoor flea market, plus plenty
of dealers, contests, meetings and forums, prizes, VE Exams, and
the famous "Saturday Night Social."

Location: North Carolina State Fairgrounds, Jim Graham Building.

Follow the Interstate 40 to the I-440 Beltline around
Raleigh. Take exit 3 - Hillsboro St., and go west
one mile to the Fairgrounds.

Talk-in directions on the 146.64 and 147.15 Repeaters.

Date/Time: SUNDAY, April 5, 1998, 8 am to 4 pm.
(Building opens at noon Saturday, and 6 am Sunday
for dealer/vendor setup.)

Admission: Pre-register: $5 (before March 28). Gate: $6.

Flea Market: Table/2 chairs: $10 (5 or more tables: $9 each).
120 Volt AC: $15 per connection.
Drive-In unloading/loading permitted. Bring your
own extension cords and carts. Sorry, no tailgating
in the parking lot. (See address below for
registration.)

Parking: FREE on site!

VE Exams: Exams begin at 11 AM. Bring Picture ID, original
AND photocopy of license and any CSCE's. $6.25.
Contact Vince AA4MY at 919-676-4697 for VE only.

Meetings: ARRL/ARES, NTS, Army and Navy MARS, ATV, QRP,
Packet/APRS, DX.

Bill Moore NC1L, ARRL Century Club Supervisor
will present a DX forum, and provide DXCC
QSL checking.

WOUFF HONG: ARRL members are invited to take part in the
official Royal Order of the Wouff Hong induction

>does anyone know how
>well scanners would work in airliners?

I used a RadioShack AM/FM/Air Band Analog Reciever aboard the Mexicana Airline, and they didn't seem to mind. Reception on FM was great, I could still hear my local Philadelphia, PA FM stations down to around Washington DC and even a bit further south. Air Band (118-136 MHz) was OK, but not great. AM was nearly impossible, I only could copy a few stations during the entire trip Philly to Cancun, Mexico.

In article <6eafkt$bh3@access4.digex.net>, kplotkin@access4.digex.net wrote
>
>I built my cables with no resistor.

I included the resistor in my first attempt, which didn't work. Once
I got rid of the resistor and the connection between the tip and
the receive-data pin on the computer side, it worked just fine.

>They're also short - half of a 6' audio cable.

Yeah...I put about 6' of standard telephone pre-wire cable on the
DB-9, intending to use a 1/8" stereo jack and a very short (6")
double 1/8 stereo plug cable to connect the jack to the scanner.
After I made up the computer end, I couldn't find the 6" cable,
so I used a 6' one.

What I actually tried to do at first was to mount the 1/8" stereo
jack in the backshell of the DB-9 connector. The jack was just a
little too big; probably an open frame jack and a slightly different
DB-9 backshell would work. The jack opening would stick through the
cable-entry hole in the backshell...then you could just use a standard
audio cable with 1/8" stereo plugs on both ends to hook up the scanner.

>2400 bps isn't particularly fast, though, so I'd be suprised
>if cable length would be a problem.

The only thing I haven't tried is downloading a full 400 channels.
But, I didn't have any problem downloading the list I've got, and
I've done it about three times now. I don't have anything in
banks 5-10, and I only have about the first 15-20 channels in
banks 1-4 filled up. If there are any timing or signal-quality
problems, they might show up over the course of a longer, 400-channel
download. But so far I haven't seen any.

>There are two versions of LOAD. [...] The version that supports only
>1 and 2 is the one that supports between-character and between-line
>delays, but I don't know of anybody who's needed to do that yet.

I was using the "simple" 1/2 only version of LOAD that doesn't require
the handshake jumpers. Before I removed the resistor, I had played
with the timing parameters. I could make it have different errors by
adjusting the timing - I could make it say 2-Error consistently with
one setting, and 3-Error consistently with another. Once I ditched
the resistor and tip connection, the default of no delays worked just
fine. I am currently using COM 2, but I have also tried it successfully
on COM 1.

>Or maybe have one for disposable cells and one for charging nicads.

I want to do away with the holder altogether. I want to get a 12 V gel-cell battery, and cut it down to 3/4 size. This will a) make it fit in the battery compartment and b) give it a 9 V output. This will have a longer run-time than nicads. Might be a bit messy though. :) :)

Thanks Ken!

Yea, its UHF
H34SVU7160BN

the H is for Handitalkie, the 3 is the power level , the 4 is
UHF,(VHF=3), the SVU says the equipment type (like HT600 or MT1000) if
gray, its HT600, if kinda dark charcoal its MT1000
the other numbers in this case are specific to that radio. Used to be
once upon a time these numbers were about the same from radio to
radio. Not any more. The B means its a revision B radio. ALL the
radios end in N.

I cant remember now, if SVU is Ht600 or MT1000. the color will confirm
this. I do know its a Gensis radio. HT1000, Mt2000 etc are now called
Jedi radio.s

Hope this helps. We fix alot of those radios at our self mantained
radio shop. Let me know if I can help.

Precisely what part of plain English is it that you don't understand?
What I said was that the ostensible reason the DOJ investigation
"stalled" makes no sense in light of pertinent USSC rulings.

This what I mean!! This type of lawsuit has a chance to clean up
theis crap of a law. It has taken time (since 1986) for this come

to this point. And it has taken a few democrats in trouble with this law to make it a case. Watch what happens.

well, mdt1234 works on 400 mhz, as does the mdt.exe that goes WITH trunker
(in the beta site),
and for motorola, Trunker can do tracking in 400 mhz systems. try THAT with
your Uniden TrunkTracker...
in fact, a trunker for EDACS is due out SHORTLY - already in test by
trunking enthusiasts in 10 cities!

1744. WiNRADiO and New Open Architecture !!

Newsgroup: rec.radio.scanner
Date: 1998-03-15 00:00:00 UTC
From: bcheek@san.rr.com
Message-ID: <350c47e5.48320499@news2.cts.com>
Source record: 166943

@cts.com
Organization: COMMtronics Engineering / World Scanner Report
Newsgroups: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur,rec.radio.shortwave

Holy Cow!

WiNRADiO (the company) just went 'open architecture'
on their API and commandsets for WiNRADiO (the radio).
They've released developer information up the gazoo
such that there's something for most everyone now.

Like me. All I know of programming is that it comes
on radio and television. But using their developer
information, I rapped out a quick macro to run from
Microsoft Word 97 that demonstrates how easy it is to
control WiNRADiO via DDE (Dynamic Data Exchange).

A slight variation on the below macro would work
in MS Excel, too. Possibilities are limitless.

```
============================================================
Sub WinRADIO()
'
' WinRADIO Macro
' Macro created 03/15/98 by William D. Cheek, Sr.
'
channel = DDEInitiate("WinRadio", "WinRadio")
DDEExecute channel, "[PowerOn][SetFrequency(162400000)]"
DDEExecute channel, "[SetMode(FMN)][SetVolume(7)]"
DDEExecute channel, "[AttenOn]"
ss$ = DDERequest(channel, "GetSignalStrength")
Selection.TypeText Text:=ss$
gf$ = DDERequest(channel, "GetFrequency")
Selection.TypeText Text:=gf$
DDETerminate channel
End Sub
============================================================
```

The above macro is run right from MS WORD (word processor)
and it does several things: Turns power on; sets the freq
to NOAA's 162.400 MHz; sets the NFM mode; adjusts Volume
to "7"; turns on the ATTenuator; fetches signal strength and
frequency and inserts the values into the Word document.

Yikes! Too cool! But there is a whole lot more than just
open code for DDE. The company has created a Web page for

C++, Delphi, and VisualBasic programmers as well! Also for
pure MS-DOS and maybe even other environments. Ya gotta see
it to believe it.

http://www.winradio.com/home/developer.htm

Try the above for starters. It's a real eyeball opener!

Now let's see Icom step and fetch to catch up, especially
since they've gone on record to close their developer
information to any but "qualified developers", whatever
the heck THAT means.

"Open architecture" is what propelled the IBM/PC to greatness.
You sure can't fault WiNRADiO for taking that step, but you
can cast a raised eyebrow toward Icom and others who withhold
information about their platforms.

Well, yes, that's how they used to do it,
circa 1986-1994. The relevant program pins
were tied low (or high) and all you had to
do was reverse that programming and you were
in business.

But not anymore....not since the TDDRA of 1994
that, among many things, forbade the importing
or selling of scanners that were "easily modified"
for cellular. This includes diode and resistor
"programming".

Sad to say, ol' pal, but you're a day late,
and maybe ten bucks short, considering inflation.

Sorry....line of sight on "flat ground"
is infinite.

Line of sight on smooth earth or out at
sea is approximated by:

miles = SquareRoot of twice the height of
the observer (antenna) in feet.

Example: On the ocean, a sailboat mast 32' above
the water sees the horizon at about 8-miles.

This is only an approximation for visual light. Radio
waves diffract around the curve of the earth, more so
the lower the frequency, and less so, the higher the
frequency. A rule of thumb for estimates is 15% more
than the visual line of sight, but that really can vary.

Yes, but the tower of "Babel" didn't get its name
until long after the "fact".

No?

Wasn't it reputed to have been in Babylon?

You're lying again, Hermie. Lying right
through your buckteeth on a 2" overbite.

> > I very clearly remember how it started! Cheek posted
> > his FAQ, and *YOU* replied with your "How dare you" followup! There

> You have given PURE BULL! YOu must have rose colored glasses!

No, Hermie, the man remembers. Others do, too.
Many do. Hundreds do. I just asked them to
stay out of this fracas betwixt you and me. There
is no need. You are lower than a urinary ant,
Hermie-baby. Now go get your harelip fixed.

You are so damned dumb, Hermie, that you
can't ask a straight question, much less
comprehend a straight answer.

There is no question for which I owe you
an answer, Hermie. If a dogturd on the sidewalk
jumped up and asked you a question, would you
feel beholden to answer *it* ?

Well? That's how I look at your drivel.

You absolutely don't count for gnat hair, Hermie.
You're as worthless as hips on a damn snake.

And stupid beyond belief........

You don't need plans or a book for that.
Calculate the wavelength of the 800 MHz
freq that interests you; divide by four;
and get to work on a quarter-wave. Or
divide it by two for a half-wave.

Wavelength (meters) = 300 / F(MHz)

Example: WL @ 900 MHz = 300 / 900
= 0.333 meters

I'm new to the scanning world. I just bought a used handheld scanner because I didn't want to invest lots of money into the equipment without being sure of how I would like it. My scanner is a Bearcat BC60XLT. I have a question on the 'SEARCH' function of my scanner. I can't seem to figure out how to search between 2 frequencies and I don't have a manual as I bought the scanner used. Can someone who is familiar with my scanner walk me through the process step by step?

Thanks in advance,

Chris Smith

Come check out the new chat room for scanner users on Irc.dalnet #scanning. We have been on for around 2 mths now and have grown to over 30 visitors and have an average of about 6 ppl on per night. We can grow larger but only by spreading the word and eveyone dropping in for a vist.

We have been chatting about who has what scanners, What is the best hand held scanner, What's the best base scanner, What you like to scan, Trading pictures of each other and there scanners. Lots of other things you could only dream of doing on a newsgroup.

So stop by Irc.dalnet #scanning. We usually try to get on around (9:00pm central time and stay on till we are tired of typing.)
See you tonight at (9:00pm on Irc.dalnet #scanning)

you must realize that discone antennas offer no gain. So they can never
be as good as an antenna designed around a single narrow band width with
a gain factor designed in.

Is Radio Shack EVER going to come out with a computer interface for the pro64 and its sister tabletop scanner?? I've seen 3rd party computer interfaces on the market but whats the deal? I mean why would they mention it in the manual if it would never come out? I guess it's kind of useless since it would be only for uploading frequencies. Any info would be greatly appreciated!
Thnks, AgentBlue

1769. All Hail King Mackey the Great Liar

Newsgroup: rec.radio.scanner
Date: 1998-03-15 00:00:00 UTC
From: Richard Kendrick <wa7twi@primenet.com>
Message-ID: <350C8926.32F7D415@primenet.com>
Source record: 166968
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Behold brothers and sisters, I bring you the profound story of how King Mackey the Great became so. It is an exciting tale filled with wonder, awe, and heroic deeds. Come closer, as I relate this grand history.

In the land of Scannerdom, the county of Power Supply was plagued with a terrible injustice. The evil mercenary force from Capacitor held the people of Smoke prisoner. Repeater, the ruler in exile of Power Supply, offered a rare and unused Radio Shack battery card to anyone who could free the people of Smoke from their Capacitor prison. A young and fearless warrior stepped forward to take up the gauntlet. Repeater told him of the dangers but the young man was undaunted and resolutely set off to free them.

When he arrived at the gate, Mackey was challenged by the fearsome guardians, Positive and Negative. So terrible were these mighty sentinels that even the renowned guardian Cerebus trembled when faced with Positive and Negative. Armed with his trusty screwdriver he didst battle with them. In the hands of a true warrior the screwdriver is no common weapon. Our hero, battle tested and proven in the labs and urinals of Technical School, was much more than a professional. He was a Grand Master of the Number Two Phillips Blade.

The guards fired spinning hex nuts and sliced with the dreaded razor sharp quartertwenty threads. Again and again, using every feint, lunge, and parry the guardians had learned in centuries of defending the cabinet, but to no avail. Mackey maneuvered himself and with one swift strike, he ended it. He had touched both guardians in the only way to kill them. He bridged the gap between them in a move only a Master Bladesman could execute, the Short.

The Capacitor force exploded from the cataclysm releasing the Smoke from their electrolytic bondage. Afterward, the Smoke rewarded Mackey with their highest honor, the Diddler of the Spark.

Mackey, hoisted by his own petard, began the journey home. In the land of Recdotradiodotscanner, he was attacked by the Legions of Ennui. These were no ordinary warriors, but elite shock troops. Armed with the latest in Apathy, Disdain, and Contempt, they lay seige to our hero.

For months, a battle of attrition was waged. One after another, mighty warriors all, they fell. Even I, your humble scribe was a soldier in the Legion of Ennui. Alas, I too, fell before the great Mackey. No one could understand how a single man could withstand such an onslaught as we heaped upon him. Then we learned the source of his great strength. He was the most favored disciple of the malevolent gods, Fraud and Liar. They had taught him the secret fighting languages of Turpitude, Innuendo, and the most deadly of them all, Obscenity. Under their smutty tutelage, he repeatedly repeled the attacks with adroit displays of oratorical onanism.

There was a point in the war when we thought we were going to prevail. We had Mackey surrounded, he was in everybodys kill file, and his ISPs were terminating his accounts as fast as he could login. He had been beaten back to where he stood alone, armed only with a 300 baud modem and a Commodore 64.

Sadly, we all were victim to his great strategy and now he sprang his most devastating weapon. Surrounding him with our keyboards poised for the final death blow, he hoisted his hands above him. Like Moses bestowing the Ten Commandments to the chosen people, in his hands his mail-order diploma proclaming him Master of Communication Technology smote us down.

Cowered by the supreme Divinity before us, a hush fell upon the surrounding army. The only sound was a muffled cough from one of the younger soldiers. We lay prostrate on the ground before him, fearful of his wrath. Who were we to show the temerity to challenge his divine turgescence. We waited. Slowly, he walked through the defeated masses, and went home.

Upon returning to Scannerdom, he found word of his great deeds had preceded him. He was declared Supreme Grand Master Fool of the Universe and the people clamored for his ordination as King. In response, the Church of Scanner Mods proclaimed him King and the great sage and visionary Pope Bcheek presided over the coronation. As he placed the Discone Crown upon his head, he spoke the sacred papal blessing, "This boy reeks."

So there you have it, brothers and sisters. Behold the saga of his fetidness, King Mackey the Great, Ruler of Torpor, Supreme Grand Master Fool of the Universe, Grand Master of the Number Two Phillips Blade, holder of the Diddler of the Spark, Divine Master of Communication Technology, High Priest of the sect of Fraud and Liar, and Orational Master of Turpitude, Innuendo, and Obscenity.

All hail King Mackey the Great Liar.

1770. John Mackey's Obituary

Newsgroup: rec.radio.scanner
Date: 1998-03-15 00:00:00 UTC
From: Richard Kendrick <wa7twi@primenet.com>
Message-ID: <350C895F.D0AA900E@primenet.com>
Source record: 166969

Infamous Internet stalker John Mackey was found dead at his dingy studio apartment in Portland, Oregon last night. Known for his relentless pursuit and harassment of technical author Bill Cheek, Mackey was found electrocuted in his bath tub. The coroner has determined that Mackey was indulging himself with an AC operated sexual appliance when the device malfunctioned, killing him in the process. Also found in the bathroom by the coroner was a VCR playing a Richard Simmons workout video.

Long considered hapless, incompetent, and inept, his death came as no surprise by those who knew him. Devoutly claiming to have held a Masters Degree in Communication Technology, Mackey could never provide credible proof when he was challenged to do so. After repeated displays of technical incompetence and blowing up numerous power supplies through idiotic interconnections, no one believed he had really earned the degrees he claimed.

After years of abusing Prozac, K-Y Jelly, cough medicines, and Preparation H, his behavior became increasingly erratic. He began to publicly proclaim his love for fitness guru Richard Simmons and boasted of patronizing child prostitutes. Shortly before his death, Mackey was seen performing billy goat gonad transplants as gland cures for the spermatically challenged and often went door-to-door collecting for static cling. Considering it his civic duty, he diligently tried to answer all his "occupant" letters.

Once known as King Mackey the Great, Ruler of Torpor, Supreme Grand Master Fool of the Universe, Grand Master of the Number Two Phillips Blade, holder of the Diddler of the Spark, High Priest of the sect of Fraud and Liar, and Orational Master of Turpitude, Innuendo, and Obscenity, he fell into disrepute in his later years, simply being known as a pitful liar.

Before his death, he was active in the amateur radio group, Phony Amateur Radio Goon-balls. Having no relatives or friends who would claim Mackey's body, the coroner's office will cremate the remains in accordance with public law regarding the death of indigents. The ashes will be recycled into asphalt to be used in new public works projects. There will be no ceremony or public viewing.

1771. Top Ten Reasons Why john Mackey Is The Most Loved Person on The Internet

Top Ten Reasons Why John Mackey is the Most Loved
Personality on the Internet Today

10. Has generated more posts than Canter and Siegel.

9. Has consistently demonstrated the highest intelligence of
all the rocks on Earth.

8. Authored the definitive self-help book based on his own
true life story, "Love and Vinyl or How To Tell If Your
Blow-up Doll Is Unfaithful."

7. For his Master's thesis, wrote the highly acclaimed book,
"The Flashlight On-Off Switch, Friend or Foe."

6. Has deprived more villages of an idiot than all the people
he has called a fool.

5. Created the all time great pick-up line "Hey babe, would
you like to go to my place and see my collection of used
airline vomit bags and feminine hygiene products?"

4. Entered medical history when he became the first person
known to have his vocal chords in his sphincter.

3. He's in the Internet Hall of Infamy for telling the most
lies in a single post.

2. As the World's Only Human Toilet-Boy, Roto-Rooter gives him
the biggest professional courtesy discount.

1. Voted Most Popular Bitch of Cell Block C five years in a row.

Jim,
Check this URL. He sells a frequency-adjustable inverter (not like the
Ramsey, whose frequency is fixed)

No, I did *not* confirm you've made relevant posts, Toilet Boy. Just idiotic and inaccurate ones. You lie again. Otherwise post the statements.

> OBVIOUSLY, you have NO IDEA OF WHAT YOU ARE TALKIN ABOUT!

Bragging about yourself again, Toilet Boy. We know you are clueless.

> Besides, I rarely see you make on-topic posts, but often see your
> bitching type of posts!

You can't read without great strain and not all of your dweeb parg buddies can read either. It makes it very hard for you to find someone to read every relevant post to you.

Another way to extend the tape in a normal recorder (and the method most of the ads you read use) is to slow down the motor speed that is running the tape drive mechanism. This slowing down of the tape will degrade the audio some so don't go to low to start out with. You might try installing a potentiometer to controll the speed from outside the unit insted of a single reststor inside.

Keep in mind though that slowing down the drive will result in a recording that can only be played back on the machine that you recorded on. Otherwise it will actually sound slow.

1775. PA Systems???

I got a tough one here. I was wonder what the standard frequency response for PA systems are. I was thinking that they would generally be in one section of the band plans. Thanks!

-Ben Cook

Hello All!

The Trunked Radio Information Homepage has been up for almost six months now....and has been a huge success!

Stop by and take a look at the collection of information related to Radio trunking.

http://web2.airmail.net/lblant1/trunked.htm

Of course, if you have changes or additions, feel free to send them my way.

Thanks!
-Lb

Ben unless someone else here is one up on me, your gonna have to try
again... PA Systems? Public Address?
Section of what band?

Tim
